

Government - Federal, Local & Military

Specialized Programs & Support

Headquartered in Melville, NY

Dedicated support team

Full system warranties

ABOUT LEVITON

Founded in New York in 1906, Leviton is a privately held manufacturer of electrical, electronic, and telecommunication devices. We have manufacturing facilities throughout the United States and around the world and we are headquartered in Melville, NY. Our devices are used by multiple government agencies throughout the world for multiple applications.

ABOUT LEVITON NETWORK SOLUTIONS

Leviton's Network Solutions division was created in 1988 to meet the growing need for telecommunications and high-speed data technologies. Today, we are a leading global provider of copper, fiber, and power network infrastructure solutions. Our systems are used in federal and state agencies, military installations, health care and educational institutions, and technology firms.

Many Leviton Network Solutions products are designed and manufactured in the United States. Category-rated copper and fiber optic cable, connectors, patch panels, fiber enclosures, copper and fiber trunks, and much more are produced in company-owned and operated, state-of-the-art U.S. facilities. A great deal of Leviton Network Solutions products are listed on our channel partners GSA Schedules, SEWP contracts, and other government buying vehicles and conform to at least one of the following government purchasing requirements; including Build America Buy America (BABA), Buy American Act (BAA), United States Mexico Canada Act (USMCA), and Trade Agreements Act (TAA).

Our manufacturing facilities follow six-sigma manufacturing processes and use continuous improvement methodologies that result in exceptional quality in all areas of our operations. Rigorous testing in our own test facilities ensures that everything we manufacture will perform above industry standards with additional headroom to spare. Best of all, certified installations of Leviton copper and fiber systems are backed by a lifetime product and performance warranty when installed by an authorized Leviton installer.

Creating a sustainable environment is crucial for all of us. As part of Leviton's greener business model, our primary cable and connectivity factories are ISO 14001 and ISO 50001 Certified for environmental and energy management systems. We follow strict manufacturing practices and develop products that can contribute to greater energy savings, create less waste, and reduce your overall carbon footprint.

THE LEVITON GOVERNMENT SOLUTIONS PROGRAM

Our dedicated government team has the technical expertise, critical contacts, and support services you need. Team members are aligned with branches of the military, government agencies, and systems integrators. They have relationships with mandatory-use contract holders and GSA-schedule-approved distributors. In addition, they have relationships with Veteran Owned, Service-Disabled Veteran Owned Small Businesses, MBE, WBE, DBE, and 8(a) contractors. Finally, the team's specification and training support for contractors and end users helps maximize the project's success.
