Product Bulletin Residential Antimicrobial Treated Devices and Wallplates

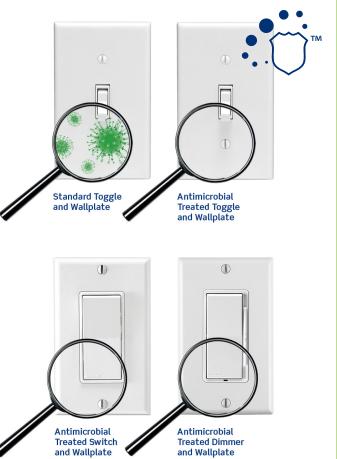

Replacing traditional devices with antimicrobial treated products provides a practical solution to help keep the surface of devices and wallplates throughout the home cleaner. By incorporating an antimicrobial additive into the product material, Leviton antimicrobial treated devices help to inhibit the growth of mold, mildew, fungi and odorcausing bacteria on the surface of the device between normal cleanings.

Industry-Leading Protection

The active material used in Leviton residential antimicrobial treated products is effective in protecting the device from discoloration, staining, deterioration and corrosion caused by mold, mildew, fungi and odor-causing bacteria.

Applications

Entryways, Kitchens, Bathrooms, Children's Rooms, Hallways, Basements, Utility/Laundry Rooms, and Garages.

Features and Benefits

- -Helps create a cleaner home environment by helping to keep surfaces cleaner
- -Use both antimicrobial treated device and wallplate for complete coverage
- -Ideal for all rooms throughout the home including bathrooms, hallways, entryways, and kitchens
- -Same look and feel as traditional devices and wallplates
