INTRODUCTION

The Switch can be managed through the Switch’s serial port, Telnet, or the Web-based management agent. The Command Line Interface (CLI) can be used to configure and manage the Switch via the serial port or Telnet interfaces. This manual provides a reference for all of the commands contained in the CLI. Configuration and management of the Switch via the Web-based management agent is discussed in the Manual. This manual provides a reference for all of the commands contained in the CLI for members of this series, including the DES-3028, DES-3028P, DES-3028G, DES-3052, and DES-3052P. Examples present in this manual may refer to any member of this series and may show different port counts, but are universal to this series of switches, unless otherwise stated. Configuration and management of the Switch via the Web-based management agent is discussed in the User’s Guide.

Accessing the Switch via the Serial Port

The Switch’s serial port’s default settings are as follows:

- 9600 baud
- no parity
- 8 data bits
- 1 stop bit

A computer running a terminal emulation program capable of emulating a VT-100 terminal and a serial port configured as above are then connected to the Switch’s serial port via an RS-232 DB-9 cable.

With the serial port properly connected to a management computer, the following screen should be visible. If this screen does not appear, try pressing Ctrl+r to refresh the console screen.

![Initial CLI screen](image)

Figure 1-1. Initial CLI screen

There is no initial username or password. Just press the Enter key twice to display the CLI input cursor – DES-3028P:4#. This is the command line where all commands are input.
Setting the Switch’s IP Address

Each Switch must be assigned its own IP Address, which is used for communication with an SNMP network manager or other TCP/IP application (for example BOOTP, TFTP). The Switch’s default IP address is 10.90.90.90. Users can change the default Switch IP address to meet the specification of your networking address scheme.

The Switch is also assigned a unique MAC address by the factory. This MAC address cannot be changed, and can be found on the initial boot console screen – shown below.

```
Boot Procedure V1.00.06
------------------------------------------------------------------------
Power On Self Test..................100%
MAC Address : 00-21-91-98-60-77
H/W Version : A1
Please wait, loading V2.00.B23 Runtime image........100%
```

**Figure 1-2. Boot screen**

The Switch’s MAC address can also be found in the Web management program on the Switch Information (Basic Settings) window on the Configuration menu.

The IP address for the Switch must be set before it can be managed with the Web-based manager. The Switch IP address can be automatically set using BOOTP or DHCP protocols, in which case the actual address assigned to the Switch must be known.

The IP address may be set using the Command Line Interface (CLI) over the console serial port as follows:

1. Starting at the command line prompt, enter the commands `config ipif System ipaddress xxx.xxx.xxx.xxx/yyy.yyy.yyy.yyy`. Where the x’s represent the IP address to be assigned to the IP interface named System and the y’s represent the corresponding subnet mask.

2. Alternatively, users can enter `config ipif System ipaddress xxx.xxx.xxx.xxx/z`. Where the x’s represent the IP address to be assigned to the IP interface named System and the z represents the corresponding number of subnets in CIDR notation.

The IP interface named System on the Switch can be assigned an IP address and subnet mask which can then be used to connect a management station to the Switch’s Telnet or Web-based management agent.

```
DES-3028P:4#config ipif System ipaddress 10.73.21.11/255.0.0.0
Command: config ipif System ipaddress 10.73.21.11/8
Success.
```

**Figure 1-3. Assigning an IP Address**

In the above example, the Switch was assigned an IP address of 10.90.90.91 with a subnet mask of 255.0.0.0. The system message Success indicates that the command was executed successfully. The Switch can now be configured and managed via Telnet, SNMP MIB browser and the CLI or via the Web-based management agent using the above IP address to connect to the Switch.
USING THE CONSOLE CLI

The DES-3028/28P/28G/52/52P support a console management interface that allows the user to connect to the Switch’s management agent via a serial port and a terminal or a computer running a terminal emulation program. The console can also be used over the network using the TCP/IP Telnet protocol. The console program can be used to configure the Switch to use an SNMP-based network management software over the network.

This chapter describes how to use the console interface to access the Switch, change its settings, and monitor its operation.

Note: Switch configuration settings are saved to non-volatile RAM using the save command. The current configuration will then be retained in the Switch's NV-RAM, and reloaded when the Switch is rebooted. If the Switch is rebooted without using the save command, the last configuration saved to NV-RAM will be loaded.

Connecting to the Switch

The console interface is used by connecting the Switch to a VT100-compatible terminal or a computer running an ordinary terminal emulator program (e.g., the HyperTerminal program included with the Windows operating system) using an RS-232C serial cable. Your terminal parameters will need to be set to:

- VT-100 compatible
- 9600 baud
- 8 data bits
- No parity
- One stop bit
- No flow control

Users can also access the same functions over a Telnet interface. Once users have set an IP address for your Switch, users can use a Telnet program (in VT-100 compatible terminal mode) to access and control the Switch. All of the screens are identical, whether accessed from the console port or from a Telnet interface.

After the Switch reboots and users have logged in, the console looks like this:

Figure 2-1. Initial Console Screen after logging in

Commands are entered at the command prompt, DES-3028P:4#.

There are a number of helpful features included in the CLI. Entering the ? command will display a list of all of the top-level commands.
When users enter a command without its required parameters, the CLI will prompt users with Next possible completions: message.

In this case, the command config account was entered with the parameter <username>. The CLI will then prompt users to enter the <username> with the message, Next possible completions: Every command in the CLI has this feature, and complex commands have several layers of parameter prompting.

In addition, after typing any given command plus one space, users can see all of the next possible sub-commands, in sequential order, by repeatedly pressing the Tab key.

To re-enter the previous command at the command prompt, press the up arrow cursor key. The previous command will appear at the command prompt.
In the above example, the command `config account` was entered without the required parameter `<username>`, the CLI returned the **Next possible completions: <username>** prompt. The up arrow cursor control key was pressed to re-enter the previous command (`config account`) at the command prompt. Now the appropriate username can be entered and the `config account` command re-executed.

All commands in the CLI function in this way. In addition, the syntax of the help prompts are the same as presented in this manual – angle brackets `< >` indicate a numerical value or character string, braces `{ }` indicate optional parameters or a choice of parameters, and brackets `[]` indicate required parameters.

If a command is entered that is unrecognized by the CLI, the top-level commands will be displayed under the **Available commands:** prompt.

The top-level commands consist of commands such as `show` or `config`. Most of these commands require one or more parameters to narrow the top-level command. This is equivalent to `show what?` or `config what?` Where the what? is the next parameter.

For example, if users enter the `show` command with no additional parameters, the CLI will then display all of the possible next parameters.
DES-3028P:4#show

Command: show

DES-3028P:4#

**Figure 2-6. Next possible completions: Show Command**

In the above example, all of the possible next parameters for the `show` command are displayed. At the next command prompt, the up arrow was used to re-enter the `show` command, followed by the `account` parameter. The CLI then displays the user accounts configured on the Switch.
The following symbols are used to describe how command entries are made and values and arguments are specified in this manual.

**Note:** All commands are case-sensitive. Be sure to disable Caps Lock or any other unwanted function that changes text case.

### <angle brackets>
- **Purpose:** Encloses a variable or value that must be specified.
- **Syntax:** `config ipif <ipif_name 12> [ipaddress <network_address> | vlan <vlan_name 32> | state [enable | disable] | bootp | dhcp]`
- **Description:** In the above syntax example, users must supply an IP interface name in the `<ipif_name 12>` space, a VLAN name in the `<vlan_name 32>` space, and the network address in the `<network_address>` space. Do not type the angle brackets.
- **Example Command:**

  ```
  config ipif Engineering ipaddress 10.24.22.5/255.0.0.0 vlan Design state enable
  ```

### [square brackets]
- **Purpose:** Encloses a required value or set of required arguments. One value or argument can be specified.
- **Syntax:** `create account [admin | user] <username 15>`
- **Description:** In the above syntax example, users must specify either an `admin` or a `user` level account to be created. Do not type the square brackets.
- **Example Command:**

  ```
  create account admin Darren
  ```

### | vertical bar
- **Purpose:** Separates two or more mutually exclusive items in a list, one of which must be entered.
- **Syntax:** `create account [admin | user] <username 15>`
- **Description:** In the above syntax example, users must specify either `admin`, or `user`. Do not type the vertical bar.
- **Example Command:**

  ```
  create account admin Darren
  ```

### {braces}
- **Purpose:** Encloses an optional value or set of optional arguments.
- **Syntax:** `reset {{config | system}}`
- **Description:** In the above syntax example, users have the option to specify `config` or `system`. It is not necessary to specify either optional value.
<table>

</tbody>
</table>
## Basic Switch Commands

The basic switch commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable password encryption</td>
<td></td>
</tr>
<tr>
<td>disable password encryption</td>
<td></td>
</tr>
<tr>
<td>create account</td>
<td>[admin</td>
</tr>
<tr>
<td>config account</td>
<td>&lt;username 15&gt;</td>
</tr>
<tr>
<td>show account</td>
<td></td>
</tr>
<tr>
<td>delete account</td>
<td>&lt;username 15&gt;</td>
</tr>
<tr>
<td>show session</td>
<td></td>
</tr>
<tr>
<td>show switch</td>
<td></td>
</tr>
<tr>
<td>show serial_port</td>
<td></td>
</tr>
<tr>
<td>config serial_port</td>
<td>{baud_rate [9600</td>
</tr>
<tr>
<td>enable clipaging</td>
<td></td>
</tr>
<tr>
<td>disable clipaging</td>
<td></td>
</tr>
<tr>
<td>enable telnet</td>
<td>&lt;tcp_port_number 1-65535&gt;</td>
</tr>
<tr>
<td>disable telnet</td>
<td></td>
</tr>
<tr>
<td>telnet</td>
<td>&lt;ipaddr&gt; {tcp_port &lt;value 0-65535&gt;}</td>
</tr>
<tr>
<td>enable web</td>
<td>&lt;tcp_port_number 1-65535&gt;</td>
</tr>
<tr>
<td>disable web</td>
<td></td>
</tr>
<tr>
<td>save</td>
<td>{{config</td>
</tr>
<tr>
<td>reboot</td>
<td>{force_agree}</td>
</tr>
<tr>
<td>reset</td>
<td>{{config</td>
</tr>
<tr>
<td>login</td>
<td></td>
</tr>
<tr>
<td>logout</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.
enable password encryption

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable password encryption on a user account.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable password encryption</td>
</tr>
<tr>
<td>Description</td>
<td>The user account configuration information will be stored in the configuration file, and can be applied to the system at a time in the future. If the password encryption is enabled, the password will be in encrypted form. If password encryption is disabled and the user specifies the password in encrypted form, or if the password has been converted to encrypted form by the last enabled password encryption command, the password will still be in encrypted form. It can not revert back to plain text.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable password encryption on the Switch.

```
DES-3028P:4#enable password encryption
Command: enable password encryption
Success.

DES-3028P:4#
```

disable password encryption

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable password encryption on a user account.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable password encryption</td>
</tr>
<tr>
<td>Description</td>
<td>The user account configuration information will be stored in the configuration file, and can be applied to the system at a time in the future. If the password encryption is enabled, the password will be in encrypted form. If password encryption is disabled and the user specifies the password in encrypted form, or if the password has been converted to encrypted form by the last enabled password encryption command, the password will still be in encrypted form. It can not revert back to plain text.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable password encryption on the Switch.

```
DES-3028P:4#disable password encryption
Command: disable password encryption
Success.

DES-3028P:4#
```
create account

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create user accounts.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`create [admin</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>create account</code> command is used to create user accounts that consist of a username of 1 to 15 characters and a password of 0 to 15 characters. Up to 8 user accounts can be created.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>admin &lt;username&gt;</code>&lt;br&gt;<code>user &lt;username&gt;</code></td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.&lt;br&gt;Usernames can be between 1 and 15 characters.&lt;br&gt;Passwords can be between 0 and 15 characters.</td>
</tr>
</tbody>
</table>

Example usage:

To create an administrator-level user account with the username “dlink”:

```
DES-3028P:4#create account admin dlink
Command: create account admin dlink

Enter a case-sensitive new password:****
Enter the new password again for confirmation:****

Success.
```

NOTICE: In the case of lost passwords or password corruption, please refer to Appendix C Password Recovery Procedure, at the end of this manual which will guide you through the steps necessary to resolve this issue.

config account

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure user accounts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config account &lt;username&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config account</code> command configures a user account that has been created using the <code>create account</code> command.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;username&gt;</code></td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.&lt;br&gt;Usernames can be between 1 and 15 characters.&lt;br&gt;Passwords can be between 0 and 15 characters.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the user password of “dlink” account:
DES-3028P:4# config account dlink
Command: config account dlink

Enter a old password:****
Enter a case-sensitive new password:****
Enter the new password again for confirmation:****

Success.

DES-3028P:4#

<table>
<thead>
<tr>
<th>show account</th>

### show switch

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display general information about the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show switch</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command displays information about the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To display the Switch’s information:

```
DES-3028P:4#show switch
Command: show switch

Device Type        : DES-3028P Fast Ethernet Switch
MAC Address        : 00-19-5B-EF-78-B5
IP Address         : 10.73.21.11 (Manual)
VLAN Name          : default
Subnet Mask        : 255.0.0.0
Default Gateway    : 0.0.0.0
Boot PROM Version  : Build 1.00.B06
Firmware Version   : Build 2.00.B23
Hardware Version   : A1
System Name        :
System Location    :
System Contact     :
Spanning Tree      : Disabled
GVRP              : Disabled
IGMP Snooping      : Disabled
VLAN trunk         : Disabled
802.1x             : Disabled
TELNET             : Enabled(TCP 23)
WEB                : Enabled(TCP 80)
RMON               : Disabled
SSH                : Disabled
SSL                : Disabled
```
show serial_port

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current serial port settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show serial_port</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the current serial port settings.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the serial port setting:

```
DES-3028P:4#show serial_port
Command: show serial_port

Baud Rate       : 9600
Data Bits       : 8
Parity Bits     : None
Stop Bits       : 1
Auto-Logout     : 10 mins

DES-3028P:4#
```

config serial_port

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the serial port.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config serial_port {baud_rate [9600</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the serial port's baud rate and auto logout settings.</td>
</tr>
</tbody>
</table>
| Parameters       | baud_rate [9600 | 19200 | 38400 | 115200] – The serial bit rate that will be used to communicate with the management host. There are four options: 9600, 19200, 38400, 115200.

never – No time limit on the length of time the console can be open with no user input.

2_minutes – The console will log out the current user if there is no user input for 2 minutes.

5_minutes – The console will log out the current user if there is no user input for 5 minutes.

10_minutes – The console will log out the current user if there is no user input for 10 minutes.

15_minutes – The console will log out the current user if there is no user input for 15 minutes. |
| Restrictions     | Only Administrator-level users can issue this command. |

Example usage:

To configure the baud rate:

```
DES-3028P:4#config serial_port baud_rate 115200
Command: config serial_port baud_rate 115200
```
enable clipaging

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to pause the scrolling of the console screen when a command displays more than one page.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable clipaging</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used when issuing a command which causes the console screen to rapidly scroll through several pages. This command will cause the console to pause at the end of each page. The default setting is enabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable pausing of the screen display when the show command output reaches the end of the page:

```
DES-3028P:4#enable clipaging
Command: enable clipaging
Success.
```

disable clipaging

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the pausing of the console screen scrolling at the end of each page when a command displays more than one screen of information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable clipaging</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to disable the pausing of the console screen at the end of each page when a command would display more than one screen of information.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable pausing of the screen display when show command output reaches the end of the page:

```
DES-3028P:4#disable clipaging
Command: disable clipaging
Success.
```

enable telnet

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable communication with and management of the Switch using the Telnet protocol.</th>
</tr>
</thead>
</table>

16
enable telnet

Syntax: 
```
enable telnet <tcp_port_number 1-65535>
```

Description: This command is used to enable the Telnet protocol on the Switch. The user can specify the TCP or UDP port number the Switch will use to listen for Telnet requests.

Parameters: 
- `<tcp_port_number 1-65535>` – The TCP port number. TCP ports are numbered between 1 and 65535. The “well-known” TCP port for the Telnet protocol is 23.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To enable Telnet and configure port number:

```
DES-3028P:4#enable telnet 23
Command: enable telnet 23
Success.
DES-3028P:4#
```

disable telnet

Purpose: Used to disable the Telnet protocol on the Switch.

Syntax: 
```
disable telnet
```

Description: This command is used to disable the Telnet protocol on the Switch.

Parameters: None.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To disable the Telnet protocol on the Switch:

```
DES-3028P:4#disable telnet
Command: disable telnet
Success.
DES-3028P:4#
```

telnet

Purpose: Used to Telnet another device on the network.

Syntax: 
```
telnet <ipaddr> {tcp_port <value 0-65535>}
```

Description: This command is used to connect to another device’s management through Telnet.

Parameters: 
- `<ipaddr>` – Enter the IP address of the device to connect through, using Telnet.
- `tcp_port <value 0-65535>` – Enter the TCP port number used to connect through. The common TCP port number for telnet is 23.

Restrictions: Only Administrator-level users can issue this command.

Example usage:
To connect to a device through telnet with an IP address of 10.53.13.99:

```
DES-3028P:4#telnet 10.53.13.99 tcp_port 23
Command: telnet 10.53.13.99 tcp_port 23
```

### enable web

**Purpose**
Used to enable the HTTP-based management software on the Switch.

**Syntax**
```
enable web <tcp_port_number 1-65535>
```

**Description**
This command is used to enable the Web-based management software on the Switch. The user can specify the TCP port number the Switch will use to listen for Telnet requests.

**Parameters**
```
<tcp_port_number 1-65535> – The TCP port number. TCP ports are numbered between 1 and 65535. The “well-known” port for the Web-based management software is 80.
```

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To enable HTTP and configure port number:

```
DES-3028P:4#enable web 80
Command: enable web 80

Note: SSL will be disabled if web is enabled.
Success.
```

### disable web

**Purpose**
Used to disable the HTTP-based management software on the Switch.

**Syntax**
```
disable web
```

**Description**
This command disables the Web-based management software on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To disable HTTP:

```
DES-3028P:4#disable web
Command: disable web

Success.
```

### save

**Purpose**
Used to save changes in the Switch’s configuration to non-volatile RAM.
save

Syntax: save {config|log|all}

Description: This command is used to enter the current switch configuration into non-volatile RAM. The saved switch configuration will be loaded into the Switch’s memory each time the Switch is restarted.

Parameters:
- config – Used to save the current configuration to a file.
- log – Used to save the current log to a file. The log file cannot be deleted.
- all – Save changes to currently activated configurations and save log. If no keywords are specified, save the changes to the configuration. If there are no keywords specified, the changes will be saved to the configuration.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To save the Switch’s current configuration to non-volatile RAM:

```
DES-3028P:4#save
Command: save

Saving all configurations to NV-RAM... Done.
Success.

DES-3028P:4#
```

reboot

Purpose: Used to restart the Switch.

Syntax: reboot

Description: This command is used to restart the Switch.

Parameters: None.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To restart the Switch:

```
DES-3028P:4#reboot
Command: reboot

Are users sure want to proceed with the system reboot? (y|n)
Please wait, the switch is rebooting...
```

reboot force_agree

Purpose: Used to force the Switch to restart.

Syntax: reboot force_agree

Description: This command is used to force the Switch to restart.

Parameters: None.

Restrictions: Only Administrator-level users can issue this command.

Example usage:
To force the Switch to restart:

```
DES-3028P:4#reboot force_agree
Command: reboot force_agree
Please wait, the switch is rebooting...
```

### reset

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to reset the Switch to the factory default settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`reset {[config</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to restore the Switch’s configuration to the default settings assigned from the factory.</td>
</tr>
</tbody>
</table>
| Parameters | `config` – If the keyword ‘config’ is specified, all of the factory default settings are restored on the Switch including the IP address, user accounts, and the switch history log. The Switch will not save or reboot.  
  `system` – If the keyword ‘system’ is specified all of the factory default settings are restored on the Switch. The Switch will save and reboot after the settings are changed to default. Rebooting will clear all entries in the Forwarding Data Base.  
  `force_agree` – When force_agree is specified, the reset command will be executed immediately without further confirmation.  
  If no parameter is specified, the Switch’s current IP address, user accounts, and the switch history log are not changed. All other parameters are restored to the factory default settings. The Switch will not save or reboot. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To restore all of the Switch’s parameters to their default values:

```
DES-3028P:4#reset config
Command: reset config
Are you sure you want to proceed with system reset?(y/n)
Success.
DES-3028P:4#
```

### login

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to log in a user to the Switch’s console.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>login</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to initiate the login procedure. The user will be prompted for a Username and Password.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To initiate the login procedure:
**logout**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to log out a user from the Switch’s console.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>logout</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command terminates the current user’s session on the Switch’s console.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To terminate the current user’s console session:

```
DES-3028P:4#logout
```
MODIFY BANNER AND PROMPT COMMANDS

Administrator level users can modify the login banner (greeting message) and command prompt by using the commands described below.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config command_prompt</td>
<td>{&lt;string 16&gt;</td>
</tr>
<tr>
<td>config greeting_message</td>
<td>{default}</td>
</tr>
<tr>
<td>show greeting_message</td>
<td></td>
</tr>
<tr>
<td>enable greeting_message</td>
<td></td>
</tr>
<tr>
<td>disable greeting_message</td>
<td></td>
</tr>
</tbody>
</table>

The Modify Banner and Prompt commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

**config command prompt**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the command prompt.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config command_prompt {&lt;string 16&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>Administrator level users can use this command to change the command prompt.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>string 16</code> – The command prompt can be changed by entering a new name of no more that 16 characters.</td>
</tr>
<tr>
<td></td>
<td><code>username</code> – The command prompt will be changed to the login username.</td>
</tr>
<tr>
<td></td>
<td><code>default</code> – The command prompt will reset to factory default command prompt.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command. Other restrictions include:</td>
</tr>
<tr>
<td></td>
<td>• If the “reset/reset config” command is executed, the modified command prompt will remain modified. However, the “reset system” command will reset the command prompt to the original factory banner.</td>
</tr>
</tbody>
</table>

Example usage

To modify the command prompt to “AtYourService”:

```
DES-3028P:4#config command_prompt AtYourService
Command: config command_prompt AtYourService
Success.
AtYourService:4#
```

**config greeting_message**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the login banner (greeting message).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config greeting_message {default}</code></td>
</tr>
<tr>
<td>Description</td>
<td>Users can use this command to modify the login banner (greeting message)</td>
</tr>
</tbody>
</table>

### config greeting_message

<table>
<thead>
<tr>
<th>Parameters</th>
<th>default – If the user enters default to the modify banner command, then the banner will be reset to the original factory banner.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>To open the Banner Editor, click Enter after typing the config greeting_message command. Type the information to be displayed on the banner by using the commands described on the Banner Editor:</td>
</tr>
<tr>
<td></td>
<td>Quit without save: Ctrl+C</td>
</tr>
<tr>
<td></td>
<td>Move cursor: Left/Right/Up/Down</td>
</tr>
<tr>
<td></td>
<td>Erase all setting: Ctrl+X</td>
</tr>
</tbody>
</table>

### Restrictions

- Only Administrator-level users can issue this command. Other restrictions include:
  - If the "reset/reset config" command is executed, the modified banner will remain modified. However, the "reset system" command will reset the modified banner to the original factory banner.
  - The capacity of the banner is 6*80. 6 Lines and 80 characters per line.
  - Ctrl+W will only save the modified banner in the DRAM. Users need to type the “save” command to save it into FLASH.
  - Only valid in threshold level.

### Example usage:

To modify the banner to read “Say goodnight, Gracie”:

```
DES-3028P:4# config greeting_message
Command: config greeting_message

Greeting Messages Editor

```
### show greeting_message

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to view the currently configured greeting message configured on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show greeting_message</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to view the currently configured greeting message on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To view the currently configured greeting message:

```
DES-3028P:4# show greeting_message
Command: show greeting_message

========================================================================

```
SWITCH PORT COMMANDS

The switch port commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show ports</td>
<td>[&lt;portlist&gt;] {description</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

config ports

Purpose Used to configure the Switch’s Ethernet port settings.

Syntax [<portlist> | all] {medium_type [fiber | copper]} {speed [auto | 10_half | 10_full | 100_half | 100_full | 1000_full {[master | slave]}]} {flow_control [enable | disable] | learning [enable | disable] | state [enable | disable] | [description <desc 32> | clear_description] mdix [auto|normal|cross]]

Description This command allows for the configuration of the Switch’s Ethernet ports. Only the ports listed in the <portlist> will be affected.

Parameters

- **all** – Configure all ports on the Switch.
- **<portlist>** – Specifies a port or range of ports to be configured.
- **medium_type [fiber | copper]** – This applies only to the Combo ports. If configuring the Combo ports this defines the type of medium being configured.
- **speed** – Allows the user to adjust the speed for a port or range of ports. The user has a choice of the following:
  - **auto** – Enables auto-negotiation for the specified range of ports.
  - **[10 | 100 | 1000]** – Configures the speed in Mbps for the specified range of ports. Gigabit ports are statically set to 1000 but can be set to slower speeds.
  - **[half | full]** – Configures the specified range of ports as either full-duplex or half-duplex.
  - **[master | slave]** – The master setting (1000M/Full_M) will allow the port to advertise capabilities related to duplex, speed and physical layer type. The master setting will also determine the master and slave relationship between the two connected physical layers. This relationship is necessary for establishing the timing control between the two physical layers. The timing control is set on a master physical layer by a local source. The slave setting (1000M/Full_S) uses loop timing, where the timing comes from a data stream received from the master. If one connection is set for 1000M/Full_M, the other side of the connection must be set for 1000M/Full_S. Any other configuration will result in a link down status for both ports.
- **flow_control [enable | disable]** – Enable or disable flow control for the specified ports.
- **learning [enable | disable]** – Enables or disables the MAC address learning on the specified range of ports.
- **state [enable | disable]** – Enables or disables the specified range of ports.
- **description <desc 32>** – Enter an alphanumeric string of no more than 32 characters to describe a selected port interface.
- **clear_description** – Enter this command to clear the port description of the selected port(s).
- **mdix** – Specifies the MDIX setting of the port. The MDIX setting can be auto, normal or cross.

If set to normal state, the port in MDIX mode, can be connected to PC NIC using a straight cable. If set to cross state, the port in mdi mode, can be connected to a port (in mdix mode) on another switch through a straight cable.
**config ports**

| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To configure the speed of ports 1–3 to be 10 Mbps, full duplex, with learning and state enabled:

```
DES-3028P:4#config ports 1-3 speed 10_full state enable
Command: config ports 1-3 speed 10_full state enable
Success.
DES-3028P:4#
```

### show ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current configuration of a range of ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show ports [&lt;portlist&gt;] {description</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show ports</code> command displays the current configurations of a range of ports. No parameters will show all ports.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specifies a port or range of ports to be displayed.</td>
</tr>
<tr>
<td></td>
<td><code>{description}</code> – Adding this parameter to the <code>show ports</code> command indicates that a previously entered port description will be included in the display.</td>
</tr>
<tr>
<td></td>
<td><code>err_disabled</code> – Use this to list disabled ports including connection status and reason for being disabled.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>
Example usage:

To display the configuration of all ports on a standalone switch:

```
DES-3028P:4#show ports
Command show ports

<table>
<thead>
<tr>
<th>Port</th>
<th>State/MDI</th>
<th>Settings</th>
<th>Connection</th>
<th>Address Learning</th>
</tr>
</thead>

The Switch’s port security commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config port_security ports</td>
<td>[&lt;auth_portlist&gt;</td>
</tr>
<tr>
<td>delete port_security entry</td>
<td>vlan_name &lt;vlan_name 32&gt; mac_address &lt;macaddr&gt;</td>
</tr>
<tr>
<td>clear port_security_entry</td>
<td>port &lt;auth_portlist&gt;</td>
</tr>
<tr>
<td>show port_security</td>
<td>{ports &lt;auth_portlist&gt;}</td>
</tr>
<tr>
<td>enable port_security trap_log</td>
<td></td>
</tr>
<tr>
<td>disable port_security trap_log</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config port_security ports

**Purpose**
- Used to configure port security settings.

**Syntax**
- `config port_security ports [<auth_portlist> | all] {admin_state [enable] disable] | max_learning_addr <max_lock_no 0-16> | lock_address_mode [DeleteOnTimeout | DeleteOnReset | Permanent]}

**Description**
- This command allows for the configuration of the port security feature. Only the ports listed in the `<auth_portlist>` are affected.

**Parameters**
- `<auth_portlist>` – Specifies a port or range of ports to be configured.
- `all` – Configure port security for all ports on the Switch.
- `admin_state [enable | disable]` – Enable or disable port security for the listed ports.
- `max_learning_addr <max_lock_no 0-16>` – Use this to limit the number of MAC addresses dynamically listed in the FDB for the ports.
- `lock_address_mode [Permanent | DeleteOnTimeout | DeleteOnReset]` – Indicates the method of locking addresses. The user has three choices:
  - `Permanent` – The locked addresses will not age out.
  - `DeleteOnTimeout` – The locked addresses will age out after the aging timer expires (Aging Time is set using the FDB command).
  - `DeleteOnReset` – The locked addresses will not age out until the Switch has been reset.

**Restrictions**
- Only Administrator-level users can issue this command.

Example usage:

To configure the port security:
delete port_security_entry

**Purpose**
Used to delete a port security entry by MAC address, port number and VLAN ID.

**Syntax**
delete port_security_entry vlan name <vlan_name 32>
mac_address <macaddr> port <auth_port>

**Description**
This command is used to delete a single, previously learned port security entry by port, VLAN name, and MAC address.

**Parameters**
- **vlan name <vlan_name 32>** – Enter the corresponding VLAN name of the port to delete.
- **mac_address <macaddr>** – Enter the corresponding MAC address, previously learned by the port, to delete.
- **port <auth_port>** – Enter the port number which has learned the previously entered MAC address.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To delete a port security entry:

```
DES-3028P:4#delete port_security_entry vlan_name default mac_address 00-01-30-10-2C-C7 port 6
Command: delete port_security_entry vlan_name default mac_address 00-01-30-10-2C-C7 port 6
Success.
DES-3028P:4#
```

clear port_security_entry

**Purpose**
Used to clear MAC address entries learned from a specified port for the port security function.

**Syntax**
clear port_security_entry ports <auth_portlist>

**Description**
This command is used to clear MAC address entries which were learned by the Switch by a specified port. This command only relates to the port security function.

**Parameters**
- **<auth_portlist>** – Specifies a port or port range to clear.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To clear a port security entry by port:

```
DES-3028P:4#clear port_security_entry ports 1-5
Command: clear port_security_entry ports 1-5
Success.
DES-3028P:4#
```
DES-3028P:4# clear port_security_entry port 6
Command: clear port_security_entry port 6
Success.
DES-3028P:4#

### show port_security

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current port security configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show port_security {ports &lt;auth_portlist&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display port security information of the Switch’s ports. The information displayed includes port security, admin state, maximum number of learning address and lock mode.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;auth_portlist&gt;</code> – Specifies a port or range of ports to be viewed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To display the port security configuration:

```
DES-3028P:4# show port_security ports 1-10
Command: show port_security ports 1-10

Port_security Trap/Log : Disabled

<table>
<thead>
<tr>

### enable port_security trap_log

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable the trap log for port security.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable port_security trap_log</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command, along with the <code>disable port_security trap_log</code>, will enable the sending of log messages to the Switch’s log and SNMP agent when the port security of the Switch has been triggered.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**
To enable the port security trap log setting:

```
DES-3028P:4#enable port_security trap_log
Command: enable port_security trap_log
Success.
```

```
DES-3028P:4#
```

### disable port_security trap_log

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the trap log for port security.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable port_security trap_log</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command, along with the <code>enable port_security trap_log</code>, will disable the sending of log messages to the Switch's log and SNMP agent when the port security of the Switch has been triggered.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To enable the port security trap log setting:

```
DES-3028P:4#enable port_security trap_log
Command: enable port_security trap_log
Success.
```

```
DES-3028P:4#```
The DES-3028/28G/28P/52/52P support the Simple Network Management Protocol (SNMP) versions 1, 2c, and 3. Users can specify which version of the SNMP users want to use to monitor and control the Switch. The three versions of SNMP vary in the level of security provided between the management station and the network device. The following table lists the security features of the three SNMP versions:

<table>
<thead>
<tr>
<th>SNMP Version</th>
<th>Authentication Method</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>v1</td>
<td>Community String</td>
<td>Community String is used for authentication – NoAuthNoPriv</td>
</tr>
<tr>
<td>v2c</td>
<td>Community String</td>
<td>Community String is used for authentication – NoAuthNoPriv</td>
</tr>
<tr>
<td>v3</td>
<td>Username</td>
<td>Username is used for authentication – NoAuthNoPriv</td>
</tr>
<tr>
<td>v3</td>
<td>MD5 or SHA</td>
<td>Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms – AuthNoPriv</td>
</tr>
<tr>
<td>v3</td>
<td>MD5 DES or SHA DES</td>
<td>Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms – AuthPriv. DES 56-bit encryption is added based on the CBC-DES (DES-56) standard</td>
</tr>
</tbody>
</table>

The network management commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>delete snmp user</td>
<td>&lt;SNMP_name 32&gt;</td>
</tr>
<tr>
<td>show snmp user</td>
<td></td>
</tr>
<tr>
<td>create snmp view</td>
<td>&lt;view_name 32&gt; &lt;oid&gt; view_type [included</td>
</tr>
<tr>
<td>delete snmp view</td>
<td>&lt;view_name 32&gt; [all</td>
</tr>
<tr>
<td>show snmp view</td>
<td>&lt;view_name 32&gt;</td>
</tr>
<tr>
<td>create snmp community</td>
<td>&lt;community_string 32&gt; &lt;view_name 32&gt; [read_only</td>
</tr>
<tr>
<td>delete snmp community</td>
<td>&lt;community_string 32&gt;</td>
</tr>
<tr>
<td>show snmp community</td>
<td>&lt;community_string 32&gt;</td>
</tr>
<tr>
<td>config snmp engineID</td>
<td>&lt;snmp_engineID 10-64&gt;</td>
</tr>
<tr>
<td>show snmp engineID</td>
<td></td>
</tr>
<tr>
<td>create snmp group</td>
<td>&lt;groupname 32&gt; {v1</td>
</tr>
<tr>
<td>delete snmp group</td>
<td>&lt;groupname 32&gt;</td>
</tr>
<tr>
<td>show snmp groups</td>
<td></td>
</tr>
<tr>
<td>create snmp host</td>
<td>&lt;ipaddr&gt; {v1</td>
</tr>
<tr>
<td>Command</td>
<td>Parameters</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>-------------------------------</td>
</tr>
<tr>
<td>delete snmp host</td>
<td>&lt;ipaddr&gt;</td>
</tr>
<tr>
<td>show snmp host</td>
<td>&lt;ipaddr&gt;</td>
</tr>
<tr>
<td>create trusted_host</td>
<td>&lt;ipaddr&gt;</td>
</tr>
<tr>
<td>delete trusted_host</td>
<td>[all</td>
</tr>
<tr>
<td>show trusted_host</td>
<td></td>
</tr>
<tr>
<td>enable snmp traps</td>
<td></td>
</tr>
<tr>
<td>enable snmp authenticate traps</td>
<td></td>
</tr>
<tr>
<td>show snmp traps</td>
<td></td>
</tr>
<tr>
<td>disable snmp traps</td>
<td></td>
</tr>
<tr>
<td>disable snmp authenticate traps</td>
<td></td>
</tr>
<tr>
<td>config snmp system_contact</td>
<td>&lt;sw_contact&gt;</td>
</tr>
<tr>
<td>config snmp system_location</td>
<td>&lt;sw_location&gt;</td>

<tr>
<td>config snmp system_name</td>
<td>&lt;sw_name&gt;</td>
</tr>
<tr>
<td>enable rmon</td>
<td></td>
</tr>
<tr>
<td>disable rmon</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create snmp user**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create a new SNMP user and adds the user to an SNMP group that is also created by this command.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>create snmp user &lt;SNMP_name 32&gt; &lt;groupname 32&gt; {encrypted [by_password auth [md5 &lt;auth_password 8-16&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The create snmp user command creates a new SNMP user and adds the user to an SNMP group that is also created by this command. SNMP ensures: Message integrity – Ensures that packets have not been tampered with during transit. Authentication – Determines if an SNMP message is from a valid source. Encryption – Scrambles the contents of messages to prevent it from being viewed by an unauthorized source.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;SNMP_name 32&gt; – An alphanumeric name of up to 32 characters that will identify the new SNMP user. &lt;groupname 32&gt; – An alphanumeric name of up to 32 characters that will identify the SNMP group the new SNMP user will be associated with. encrypted – Allows the user to choose a type of authorization for authentication using SNMP. The user may choose: by_password – Requires the SNMP user to enter a password for authentication and privacy. The password is defined by specifying the auth_password below. This method is recommended. by_key – Requires the SNMP user to enter an encryption key for authentication and privacy. The key is defined by specifying the key in hex form below. This method is not recommended. auth – The user may also choose the type of authentication algorithms used to authenticate the snmp user. The choices are: md5 – Specifies that the HMAC-MD5-96 authentication level will be used. md5 may be utilized by entering one of the following:</td>
</tr>
</tbody>
</table>
create snmp user

- **<auth password 8-16>** – An alphanumeric string of between 8 and 16 characters that will be used to authorize the agent to receive packets for the host.
- **<auth key 32-32>** – Enter an alphanumeric string of exactly 32 characters, in hex form, to define the key that will be used to authorize the agent to receive packets for the host.
- **sha** – Specifies that the HMAC-SHA-96 authentication level will be used.
- **<auth password 8-20>** – An alphanumeric string of between 8 and 20 characters that will be used to authorize the agent to receive packets for the host.
- **<auth key 40-40>** – Enter an alphanumeric string of exactly 40 characters, in hex form, to define the key that will be used to authorize the agent to receive packets for the host.
- **priv** – Adding the priv (privacy) parameter will allow for encryption in addition to the authentication algorithm for higher security. The user may choose:
  - **des** – Adding this parameter will allow for a 56-bit encryption to be added using the DES-56 standard using:
    - **<priv_password 8-16>** – An alphanumeric string of between 8 and 16 characters that will be used to encrypt the contents of messages the host sends to the agent.
  - **<priv_key 32-32>** – Enter an alphanumeric key string of exactly 32 characters, in hex form, that will be used to encrypt the contents of messages the host sends to the agent.
- **none** – Adding this parameter will add no encryption.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To create an SNMP user on the Switch:

```
DES-3028P:4# create snmp user dlink default encrypted by_password auth md5 canadian priv none  
Command: create snmp user dlink default encrypted by_password auth md5 canadian priv none  
Success.  
DES-3028P:4#
```

delete snmp user

**Purpose**

Used to remove an SNMP user from an SNMP group and also to delete the associated SNMP group.

**Syntax**

`delete snmp user <SNMP_name 32>`

**Description**

The `delete snmp user` command removes an SNMP user from its SNMP group and then deletes the associated SNMP group.

**Parameters**

- **<SNMP_name 32>** – An alphanumeric string of up to 32 characters that identifies the SNMP user that will be deleted.

**Restrictions**

Only Administrator-level users can issue this command.
Example usage:

To delete a previously entered SNMP user on the Switch:

```plaintext
DES-3028P:4#delete snmp user dlink
Command: delete snmp user dlink
Success.
DES-3028P:4#
```

### show snmp user

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display information about each SNMP username in the SNMP group username table.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show snmp user</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show snmp user</code> command displays information about each SNMP username in the SNMP group username table.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To display the SNMP users currently configured on the Switch:

```plaintext
DES-3028P:4#show snmp user
Command: show snmp user

<table>
<thead>
<tr>
<th>Username</th>
<th>Group Name</th>
<th>SNMP Version</th>
<th>Auth-Protocol</th>
<th>PrivProtocol</th>
</tr>
</thead>
<tbody>
<tr>
<td>initial</td>
<td>initial</td>
<td>V3</td>
<td>None</td>
<td>None</td>
</tr>
</tbody>
</table>

Total Entries: 1
DES-3028P:4#
```

### create snmp view

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to assign views to community strings to limit which MIB objects and SNMP manager can access.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`create snmp view &lt;view_name 32&gt; &lt;oid&gt; view_type [included</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>create snmp view</code> command assigns views to community strings to limit which MIB objects an SNMP manager can access.</td>
</tr>
</tbody>
</table>
| Parameters | `<view_name 32>` – An alphanumeric string of up to 32 characters that identifies the SNMP view that will be created.  
`<oid>` – The object ID that identifies an object tree (MIB tree) that will be included or excluded from access by an SNMP manager.  
`view_type` – Sets the view type to be:  
  - `included` – Include this object in the list of objects that an SNMP manager can access.  
  - `excluded` – Exclude this object from the list of objects that an SNMP manager can access. |

Example usage:

To delete a previously entered SNMP user on the Switch:
**create snmp view**

| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To create an SNMP view:

```
DES-3028P:4# create snmp view dlinkview 1.3.6 view_type included
Command: create snmp view dlinkview 1.3.6 view_type included
Success.
DES-3028P:4#
```

**delete snmp view**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to remove an SNMP view entry previously created on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>delete snmp view</strong> `&lt;view_name 32&gt; [all</td>
</tr>
<tr>
<td>Description</td>
<td>The <strong>delete snmp view</strong> command is used to remove an SNMP view previously created on the Switch.</td>
</tr>
</tbody>
</table>
| Parameters | `<view_name 32>` – An alphanumeric string of up to 32 characters that identifies the SNMP view to be deleted.  
`all` – Specifies that all of the SNMP views on the Switch will be deleted.  
`<oid>` – The object ID that identifies an object tree (MIB tree) that will be deleted from the Switch. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To delete a previously configured SNMP view from the Switch:

```
DES-3028P:4# delete snmp view dlinkview all
Command: delete snmp view dlinkview all
Success.
DES-3028P:4#
```

**show snmp view**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display an SNMP view previously created on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>show snmp view</strong> <code>&lt;view_name 32&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <strong>show snmp view</strong> command displays an SNMP view previously created on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;view_name 32&gt;</code> – An alphanumeric string of up to 32 characters that identifies the SNMP view that will be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display SNMP view configuration:
create snmp community

Purpose

Used to create an SNMP community string to define the relationship between the SNMP manager and an agent. The community string acts like a password to permit access to the agent on the Switch. One or more of the following characteristics can be associated with the community string:

- An Access List of IP addresses of SNMP managers that are permitted to use the community string to gain access to the Switch's SNMP agent.
- An MIB view that defines the subset of all MIB objects that will be accessible to the SNMP community.
- read_write or read_only level permission for the MIB objects accessible to the SNMP community.

Syntax

create snmp community <community_string 32> view <view_name 32> [read_only | read_write]

Description

The create snmp community command is used to create an SNMP community string and to assign access-limiting characteristics to this community string.

Parameters

- <community_string 32> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.
- view <view_name 32> – An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.
- read_only – Specifies that SNMP community members using the community string created with this command can only read the contents of the MIBs on the Switch.
- read_write – Specifies that SNMP community members using the community string created with this command can read from and write to the contents of the MIBs on the Switch.

Restrictions

Only Administrator-level users can issue this command.
Example usage:

To create the SNMP community string “dlink:”

```
DES-3028P:4#create snmp community dlink view ReadView read_write
Command: create snmp community dlink view ReadView read_write
Success.
```

```
delete snmp community
Purpose Used to remove a specific SNMP community string from the Switch.
Syntax delete snmp community <community_string 32>
Description The delete snmp community command is used to remove a previously defined SNMP community string from the Switch.
Parameters <community_string 32> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch’s SNMP agent.
Restrictions Only Administrator-level users can issue this command.
```

Example usage:

To delete the SNMP community string “dlink:”

```
DES-3028P:4#delete snmp community dlink
Command: delete snmp community dlink
Success.
```

```
show snmp community
Purpose Used to display SNMP community strings configured on the Switch.
Syntax show snmp community {<community_string 32>}
Description The show snmp community command is used to display SNMP community strings that are configured on the Switch.
Parameters <community_string 32> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch’s SNMP agent.
Restrictions None.
```

Example usage:

To display the currently entered SNMP community strings:
DES-3028P:4#show snmp community
Command: show snmp community

SNMP Community Table

<table>
<thead>
<tr>
<th>Community Name</th>
<th>View Name</th>
<th>Access Right</th>
</tr>
</thead>
<tbody>
<tr>
<td>private</td>
<td>CommunityView</td>
<td>read_write</td>
</tr>
<tr>
<td>public</td>
<td>CommunityView</td>
<td>read_only</td>
</tr>
<tr>
<td>dlink</td>
<td>ReadView</td>
<td>read_write</td>
</tr>
</tbody>
</table>

Total Entries: 3

DES-3028P:4#

**config snmp engineID**

Purpose: Used to configure a name for the SNMP engine on the Switch.

Syntax: `config snmp engineID <snmp_engineID>`

Description: The `config snmp engineID` command configures a name for the SNMP engine on the Switch.

Parameters: `<snmp_engineID>` – An alphanumeric string that will be used to identify the SNMP engine on the Switch.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To give the SNMP agent on the Switch the name “0035636666”

DES-3028P:4#config snmp engineID 0035636666
Command: config snmp engineID 0035636666

Success.

DES-3028P:4#

**show snmp engineID**

Purpose: Used to display the identification of the SNMP engine on the Switch.

Syntax: `show snmp engineID`

Description: The `show snmp engineID` command displays the identification of the SNMP engine on the Switch.

Parameters: None.

Restrictions: None.

Example usage:

To display the current name of the SNMP engine on the Switch:

DES-3028P:4#show snmp engineID
Command: show snmp engineID

SNMP Engine ID : 0035636666
create snmp group

Purpose
Used to create a new SNMP group, or a table that maps SNMP users to SNMP views.

Syntax
create snmp group <groupname 32> [v1 | v2c | v3 [noauth_nopriv | auth_nopriv | auth_priv]] {read_view <view_name 32> | write_view <view_name 32> | notify_view <view_name 32>}

Description
The `create snmp group` command creates a new SNMP group, or a table that maps SNMP users to SNMP views.

Parameters
- `<groupname 32>` – An alphanumeric name of up to 32 characters that will identify the SNMP group the new SNMP user will be associated with.
- `v1` – Specifies that SNMP version 1 will be used. The Simple Network Management Protocol (SNMP), version 1, is a network management protocol that provides a means to monitor and control network devices.
- `v2c` – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features.
- `v3` – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:
  - Message integrity – Ensures that packets have not been tampered with during transit.
  - Authentication – Determines if an SNMP message is from a valid source.
  - Encryption – Scrambles the contents of messages to prevent it being viewed by an unauthorized source.
- `noauth_nopriv` – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.
- `auth_nopriv` – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.
- `auth_priv` – Specifies that authorization will be required, and that packets sent between the Switch and a remote SNMP manager will be encrypted.
- `read_view` – Specifies that the SNMP group being created can request SNMP messages.
- `write_view` – Specifies that the SNMP group being created has write privileges.
- `notify_view` – Specifies that the SNMP group being created can receive SNMP trap messages generated by the Switch’s SNMP agent.
- `<view_name 32>` – An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To create an SNMP group named “sg1:”
**delete snmp group**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to remove an SNMP group from the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>delete snmp group &lt;groupname 32&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>delete snmp group</code> command is used to remove an SNMP group from the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;groupname 32&gt;</code> – An alphanumeric name of up to 32 characters that will identify the SNMP group the new SNMP user will be associated with.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete the SNMP group named “sg1”.

```
DES-3028P:4#delete snmp group sg1
Command: delete snmp group sg1
Success.
DES-3028P:4#
```

**show snmp groups**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the group-names of SNMP groups currently configured on the Switch. The security model, level, and status of each group are also displayed.</th>
</tr>
</thead>
<tbody>
<tr>

**create snmp host**

**Purpose**: Used to create a recipient of SNMP traps generated by the Switch’s SNMP agent.

**Syntax**:

```
create snmp host <ipaddr> [v1 | v2c | v3 [noauth_nopriv | auth_nopriv | auth_priv] <auth_string 32>
```
### create snmp host

**Description**
The `create snmp host` command creates a recipient of SNMP traps generated by the Switch’s SNMP agent.

**Parameters**
- `<ipaddr>` – The IP address of the remote management station that will serve as the SNMP host for the Switch.
- `v1` – Specifies that SNMP version 1 will be used. The Simple Network Management Protocol (SNMP), version 1, is a network management protocol that provides a means to monitor and control network devices.
- `v2c` – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features.
- `v3` – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:
  - Message integrity – ensures that packets have not been tampered with during transit.
  - Authentication – determines if an SNMP message is from a valid source.
  - Encryption – scrambles the contents of messages to prevent it being viewed by an unauthorized source.
- `noauth_nopriv` – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.
- `auth_nopriv` – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.
- `auth_priv` – Specifies that authorization will be required, and that packets sent between the Switch and a remote SNMP manager will be encrypted.
- `<auth_string 32>` – An alphanumeric string used to authorize a remote SNMP manager to access the Switch’s SNMP agent.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To create an SNMP host to receive SNMP messages:

```
DES-3028P:4# create snmp host 10.48.74.100 v3 auth_priv public
Command: create snmp host 10.48.74.100 v3 auth_priv public
Success.
```

### delete snmp host

**Purpose**
Used to remove a recipient of SNMP traps generated by the Switch’s SNMP agent.

**Syntax**
```
delete snmp host <ipaddr>
```

**Description**
The `delete snmp host` command deletes a recipient of SNMP traps generated by the Switch’s SNMP agent.
### delete snmp host

**Parameters**

- `<ipaddr>` – The IP address of a remote SNMP manager that will receive SNMP traps generated by the Switch’s SNMP agent.

**Restrictions**

- Only Administrator-level users can issue this command.

**Example usage:**

To delete an SNMP host entry:

```
DES-3028P:4#delete snmp host 10.48.74.100
Command: delete snmp host 10.48.74.100
Success.
```

### show snmp host

**Purpose**

Used to display the recipient of SNMP traps generated by the Switch’s SNMP agent.

**Syntax**

`show snmp host {<ipaddr>}`

**Description**

The `show snmp host` command is used to display the IP addresses and configuration information of remote SNMP managers that are designated as recipients of SNMP traps that are generated by the Switch’s SNMP agent.

**Parameters**

- `<ipaddr>` – The IP address of a remote SNMP manager that will receive SNMP traps generated by the Switch’s SNMP agent.

**Restrictions**

- None.

**Example usage:**

To display the currently configured SNMP hosts on the Switch:

```
DES-3028P:4#show snmp host
Command: show snmp host

SNMP Host Table

</tbody>
</table>

Total Entries: 2
```

### create trusted_host

**Purpose**

Used to create the trusted host.

**Syntax**

`create trusted_host <ipaddr>`

**Description**

The `create trusted_host` command creates the trusted host. The Switch allows users to specify up to ten IP addresses that are allowed to manage the Switch via in-band SNMP or TELNET based management software. These IP addresses must be members of the...
create trusted_host

Management VLAN. If no IP addresses are specified, then there is nothing to prevent any IP address from accessing the Switch, provided the user knows the Username and Password.

Parameters
- `<ipaddr>` – The IP address of the trusted host to be created.

Restrictions
- Only Administrator-level users can issue this command.

Example usage:

To create the trusted host:

```
DES-3028P:4# create trusted_host 10.48.74.121
Command: create trusted_host 10.48.74.121
Success.
DES-3028P:4#
```

create trusted_host network

Purpose
- Used to create the trusted host subnet.

Syntax
- `create trusted_host network <network_address>`

Description
- The create trusted host network command creates the trusted host subnet. The Switch allows users to specify up to ten IP network addresses that are allowed to manage the Switch via in-band SNMP or TELNET based management software. These IP addresses must be members of the Management VLAN. If no IP addresses are specified, then there is nothing to prevent any IP address from accessing the Switch, provided the user knows the Username and Password.

Parameters
- `<network_address>` – The IP address and netmask of the trusted host to be created.

Restrictions
- Only Administrator-level users can issue this command.

Example usage:

To create the trusted host network:

```
DES-3028P:4# create trusted_host network 10.48.74.121/16
Command: create trusted_host network 10.48.74.121/16
Success.
DES-3028P:4#
```

show trusted_host

Purpose
- Used to display a list of trusted hosts entered on the Switch using the `create trusted_host` command above.

Syntax
- `show trusted_host`

Description
- This command is used to display a list of trusted hosts entered on the Switch using the `create trusted_host` command above.

Parameters
- None.

Restrictions
- Only Administrator-level users can issue this command.
Example Usage:

To display the list of trust hosts:

<table>
<thead>
<tr>
<th>Management Stations</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>IP Address/Netmask</strong></td>
</tr>
<tr>
<td>----------------------</td>
</tr>
<tr>
<td>10.53.13.94</td>
</tr>
<tr>
<td><strong>Total Entries: 1</strong></td>
</tr>
</tbody>
</table>

**delete trusted_host**

**Purpose**
Used to delete a trusted host entry made using the `create trusted_host` command above.

**Syntax**
delete trusted_host ipaddr <ipaddr>

**Description**
This command is used to delete a trusted host entry made using the `create trusted_host` command above.

**Parameters**
- `<ipaddr>` – The IP address of the trusted host.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To delete a trusted host with an IP address 10.48.74.121:

**delete trusted_host network**

**Purpose**
Used to delete a trusted host entry made using the `create trusted_host network` command above.

**Syntax**
delete trusted_host network <network_address>

**Description**
This command is used to delete a trusted host entry made using the `create trusted_host network` command above.

**Parameters**
- `<network_address>` – IP address and netmask of the trusted host network.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To delete a trusted host network with an IP address 10.62.0.0/16:
Success.

DES-3028P:4#

</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To prevent SNMP traps from being sent from the Switch:

```
DES-3028P:4#disable snmp traps
Command: disable snmp traps
Success.
DES-3028P:4#
```
**disable snmp authenticate traps**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable SNMP authentication trap support.</th>
</tr>

<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the SNMP authentication trap support:

```bash
DES-3028P:4#disable snmp authenticate traps
Command: disable snmp authenticate traps
Success.
DES-3028P:4#
```

**config snmp system_contact**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enter the name of a contact person who is responsible for the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config snmp system_contact{&lt;sw_contact&gt;}</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config snmp system_contact</code> command is used to enter the name and/or other information to identify a contact person who is responsible for the Switch. A maximum of 128 characters can be used.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;sw_contact&gt;</code> – A maximum of 128 characters is allowed. A NULL string is accepted if there is no contact.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the Switch contact to “MIS Department II”:

```bash
DES-3028P:4#config snmp system_contact MIS Department II
Command: config snmp system_contact MIS Department II
Success.
DES-3028P:4#
```

**config snmp system_location**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enter a description of the location of the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config snmp system_location {&lt;sw_location&gt;}</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config snmp system_location</code> command is used to enter a description of the location of the Switch. A maximum of 128 characters can be used.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;sw_location&gt;</code> – A maximum of 128 characters is allowed. A NULL string is accepted if there is no contact.</td>
</tr>
</tbody>
</table>
**config snmp system_location**

| string is accepted if there is no location desired. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To configure the Switch location for “HQ 5F”:

```
DES-3028P:4#config snmp system_location HQ 5F
Command: config snmp system_location HQ 5F
Success.
DES-3028P:4#
```

**config snmp system_name**

| Purpose | Used to configure the name for the Switch. |
| Syntax | `config snmp system_name {<sw_name>}` |
| Description | The `config snmp system_name` command configures the name of the Switch. |
| Parameters | `<sw_name>` – A maximum of 128 characters is allowed. A NULL string is accepted if no name is desired. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To configure the Switch name for “DES-3028P Switch”:

```
DES-3028P:4#config snmp system_name DES-3028P Switch
Command: config snmp system_name DES-3028P Switch
Success.
DES-3028P:4#
```

**enable rmon**

| Purpose | Used to enable RMON on the Switch. |
| Syntax | `enable rmon` |
| Description | This command is used, in conjunction with the `disable rmon` command below, to enable and disable remote monitoring (RMON) on the Switch. |
| Parameters | None. |
| Restrictions | Only Administrator-level users can issue this command. |

Example Usage:

To enable RMON:
DES-3028P:4#enable rmon
Command: enable rmon
Success.
DES-3028P:4#

<table>
<thead>
<tr>
<th>disable rmon</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td><strong>Syntax</strong></td>
</tr>
<tr>
<td><strong>Description</strong></td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
</tr>
</tbody>
</table>

Example Usage:
To disable RMON:

DES-3028P:4#disable rmon
Command: disable rmon
Success.
DES-3028P:4#
### Command Utility Commands

The switch utility commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>download</td>
<td>[firmware_fromTFTP &lt;ipaddr&gt; &lt;path_filename 64&gt; {image_id &lt;int 1-2&gt;}</td>
</tr>
<tr>
<td>config firmware</td>
<td>image_id &lt;int 1-2&gt; [delete</td>
</tr>
<tr>
<td>show firmware information</td>
<td></td>
</tr>
<tr>
<td>show config</td>
<td>[current_config</td>
</tr>
<tr>
<td>upload</td>
<td>[cfg_toTFTP</td>
</tr>
<tr>
<td>enable autoconfig</td>
<td></td>
</tr>
<tr>
<td>disable autoconfig</td>
<td></td>
</tr>
<tr>
<td>show autoconfig</td>
<td></td>
</tr>
<tr>
<td>ping</td>
<td>&lt;ipaddr&gt; {times &lt;value 1-255&gt;} {timeout &lt;sec 1-99&gt;}</td>
</tr>
<tr>
<td>config terminal_line</td>
<td>[default</td>
</tr>
<tr>
<td>show terminal line</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### download

**Purpose**
Used to download and install new firmware or a Switch configuration file from a TFTP server.

**Syntax**
```
download [firmware_fromTFTP <ipaddr> <path_filename 64> {image_id <int 1-2>} | cfg_fromTFTP <ipaddr> <path_filename 64> {increment}]```

**Description**
This command is used to download a new firmware or a Switch configuration file from a TFTP server.

**Parameters**
- `firmware_fromTFTP` – Download and install new firmware on the Switch from a TFTP server.
- `cfg_fromTFTP` – Download a switch configuration file from a TFTP server.
- `<ipaddr>` – The IP address of the TFTP server.
- `<path_filename>` – The DOS path and filename of the firmware or switch configuration file on the TFTP server. For example, C:\3028.had.
- `image_id <int 1-2>` – Specify the working section ID. The Switch can hold two firmware versions for the user to select from, which are specified by section ID.
- `increment` – Allows the download of a partial switch configuration file. This allows a file to be downloaded that will change only the switch parameters explicitly stated in the configuration file. All other switch parameters will remain unchanged.

**Restrictions**
The TFTP server must be on the same IP subnet as the Switch. Only Administrator-level users can issue this command.
Example usage:

To download a configuration file:

```
DES-3028P:4#download cfg_fromTFTP 10.48.74.121 c:\cfg\setting.txt
Command: download cfg_fromTFTP 10.48.74.121 c:\cfg\setting.txt
Connecting to server................... Done.
Download configuration............... Done.
DES-3028P:4#
DES-3028P:4##-------------------------------------------------------------------
DES-3028P:4##                   DES-3028P Configuration
DES-3028P:4##  Copyright(C) 2009 D-Link Corporation. All rights reserved.
DES-3028P:4##-------------------------------------------------------------------
DES-3028P:4#
DES-3028P:4# config serial_port baud_rate 9600 auto_logout 10_minutes
Command: config serial_port baud_rate 9600 auto_logout 10_minutes
```

The download configuration command will initiate the loading of the various settings in the order listed in the configuration file. When the file has been successfully loaded the message “End of configuration file for DES-3028P” appears followed by the command prompt.

```
DES-3028P:4#disable authen_policy
Command: disable authen_policy
Success.
DES-3028P:4#
```

**config firmware**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the firmware section image as a boot up section, or to delete the firmware section</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config firmware image_id &lt;int 1-2&gt; [delete</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the firmware section image. The user may choose to remove the firmware section or use it as a boot up section.</td>
</tr>
</tbody>
</table>
| Parameters       | `image_id` – Specifies the working section image. The Switch can hold two firmware versions for the user to select from, which are specified by image ID.  
                  | `delete` – Entering this parameter will delete the specified firmware section image.  
                  | `boot_up` – Entering this parameter will specify the firmware image ID as a boot up section image. |
| Restrictions     | Only Administrator-level users can issue this command.                                              |

Example usage:
To configure firmware section image 1 as a boot up section:

```
DES-3028P:4# config firmware image_id 1 boot_up
Command: config firmware image_id 1 boot_up
Success.
DES-3028P:4#
```

### show firmware information

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the firmware section information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show firmware information</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display the firmware section information.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

#### Example usage:

To display the current firmware information on the Switch:

```
DES-3028P:4#show firmware information
Command: show firmware information

ID  Version   Size(B)     Update Time          From                  User
--  --------  -------  -------------------  --------------------    -------------
*1  2.00.B23  1861680  0000/00/00 05:22:22  10.73.21.1(CONSOLE)      Anonymous
2  1.00.B32  1533156  0000/00/00 00:03:03  172.18.215.217(CONSOLE)  Anonymous

'*' : Boot up firmware
(SSH) : Firmware update through SSH
(WEB) : Firmware update through WEB
(SIM) : Firmware update through Single IP Management
(SNMP) : Firmware update through SNMP
(TELNET) : Firmware update through TELNET
(CONSOLE) : Firmware update through CONSOLE
```

### show config

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current or saved version of the configuration settings of the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show config [current_config</td>
</tr>
<tr>
<td>Description</td>
<td>Use this command to display all the configuration settings that are saved to NV RAM or display the configuration settings as they are currently configured. Use the keyboard to list settings one line at a time (Enter), one page at a time (Space) or view all (a).</td>
</tr>
</tbody>
</table>

The configuration settings are listed by category in the following order:
### show config

</tr>
</tbody>
</table>

**Parameters**

- `current_config` – Entering this parameter will display configurations entered without being saved to NVRAM.
- `config_in_NVRAM` – Entering this parameter will display configurations entered and saved to NVRAM.

**Restrictions**

None.

**Example usage:**

To view the current configuration settings:
DES-3028P: 4# show config current config
Command: show config current config

# DES-3028P Configuration
#

</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
</tr>
</tbody>
</table>

Example usage:

To upload a configuration file:
enable autoconfig

Purpose: Used to activate the auto configuration function for the Switch. This will load a previously saved configuration file for current use.

Syntax: `enable autoconfig`

Description: When autoconfig is enabled on the Switch, the DHCP reply will contain a configuration file and path name. It will then request the file from the TFTP server specified in the reply. When autoconfig is enabled, the ipif settings will automatically become DHCP client.

Parameters: None.

Restrictions: When autoconfig is enabled, the Switch becomes a DHCP client automatically (same as: `config ipif System dhcp`). The DHCP server must have the TFTP server IP address and configuration file name, and be configured to deliver this information in the data field of the DHCP reply packet. The TFTP server must be running and have the requested configuration file in its base directory when the request is received from the Switch. Consult the DHCP server and TFTP server software instructions for information on loading a configuration file.

If the Switch is unable to complete the auto configuration process the previously saved local configuration file present in Switch memory will be loaded.

NOTE: Dual-purpose (DHCP/TFTP) server utility software may require entry of the configuration file name and path within the user interface. Alternatively, the DHCP software may require creating a separate ext file with the configuration file name and path in a specific directory on the server. Consult the documentation for the DHCP server software if users are unsure.

Example usage:

To enable auto configuration on the Switch:

```
DES-3028P:4#enable autoconfig
Command: enable autoconfig
Success.
```

When autoconfig is enabled and the Switch is rebooted, the normal login screen will appear for a few moments while the autoconfig request (i.e. download configuration) is initiated. The console will then display the configuration parameters as they are loaded from the configuration file specified in the DHCP or TFTP server. This is exactly the same as using a download configuration command. After the entire Switch configuration is loaded, the Switch will automatically “logout” the server. The configuration settings will be saved automatically and become the active configuration.

Upon booting up the autoconfig process is initiated, the console screen will appear similar to the example below. The configuration settings will be loaded in normal order.
The very end of the autoconfig process appears like this:

```
Success.

DES-3028P:4#
DES-3028P:4## ROUTE
DES-3028P:4#
DES-3028P:4#
DES-3028P:4##---------------------------------------------------
DES-3028P:4##      End of configuration file for DES-3028P
DES-3028P:4##---------------------------------------------------
DES-3028P:4#
DES-3028P:4#
DES-3028P:4#
DES-3028P:4#
```

**NOTE:** With autoconfig enabled, the Switch ipif settings now define the Switch as a DHCP client. Use the `show switch` command to display the new IP settings status.

### disable autoconfig

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Use this to deactivate auto configuration from DHCP.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable autoconfig</code></td>
</tr>
<tr>
<td>Description</td>
<td>This instructs the Switch not to accept auto configuration instruction from the DHCP server. This does not change the IP settings of the Switch. The ipif settings will continue as DHCP client until changed with the <code>config ipif</code> command.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To stop the auto configuration function:
DES-3028P:4#disable autoconfig
Command: disable autoconfig
Success.
DES-3028P:4#

**show autoconfig**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current autoconfig status of the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show autoconfig</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will list the current status of the auto configuration function.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the autoconfig status:

```
DES-3028P:4#show autoconfig
Command: show autoconfig
Autoconfig State: Disabled
DES-3028P:4#
```

**ping**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to test the connectivity between network devices.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>ping &lt;ipaddr&gt; {times &lt;value 1-255&gt;} {timeout &lt;sec 1-99&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>The ping command sends Internet Control Message Protocol (ICMP) echo messages to a remote IP address. The remote IP address will then “echo” or return the message. This is used to confirm connectivity between the Switch and the remote device.</td>
</tr>
</tbody>
</table>
| Parameters | `<ipaddr>` – Specifies the IP address of the host.  
`times <value 1-255>` – The number of individual ICMP echo messages to be sent. A value of 0 will send an infinite ICMP echo messages. The maximum value is 255. The default is 0.  
`timeout <sec 1-99>` – Defines the time-out period while waiting for a response from the remote device. A value of 1 to 99 seconds can be specified. The default is 1 second |
| Restrictions | None. |

Example usage:

To ping the IP address 10.48.74.121 four times:
config terminal line

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the number of rows which can be displayed at a screen.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config terminal_line [default</td>
</tr>
<tr>
<td>Description</td>
<td>Used to configure the number of rows which can be displayed on a screen. Default value is 24.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:
To configure the terminal line:

```
DES-3028P:4# config terminal_line 30
Command: config terminal_line 30
Success.
DES-3028P:4#
```

show terminal line

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the number of rows which can be displayed at a screen.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show terminal_line</td>
</tr>
<tr>
<td>Description</td>
<td>Used to display the number of rows which can be displayed on a screen.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:
To show the terminal line:

```
DES-3028P:4# show terminal_line
Command: show terminal_line
Current terminal line number : 30
DES-3028P:4#
```
The network monitoring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>show packet ports</td>
<td>&lt;portlist&gt;</td>
</tr>
<tr>
<td>show error ports</td>
<td>&lt;portlist&gt;</td>
</tr>
<tr>
<td>show utilization</td>
<td>[cpu</td>
</tr>
<tr>
<td>clear counters</td>
<td>ports &lt;portlist&gt;</td>
</tr>
<tr>
<td>clear log</td>
<td></td>
</tr>
<tr>
<td>show log</td>
<td>index &lt;value_list X-Y&gt;</td>
</tr>
<tr>
<td>enable syslog</td>
<td></td>
</tr>
<tr>
<td>disable syslog</td>
<td></td>
</tr>
<tr>
<td>show syslog</td>
<td></td>
</tr>
<tr>
<td>show syslog</td>
<td></td>
</tr>
<tr>
<td>create syslog host</td>
<td>&lt;index 1-4&gt; ipaddress &lt;ipaddr&gt; [severity [informational</td>
</tr>
<tr>
<td>config syslog host</td>
<td>[all</td>
</tr>
<tr>
<td>delete syslog host</td>
<td>[&lt;index 1-4]</td>
</tr>
<tr>
<td>show syslog host</td>
<td>&lt;index 1-4&gt;</td>
</tr>
<tr>
<td>config log_save_timing</td>
<td>[time_interval &lt;min 1-65535&gt;</td>
</tr>
<tr>
<td>show log_save_timing</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### show packet ports

**Purpose**

Used to display statistics about the packets sent and received by the Switch.

**Syntax**

```
show packet ports <portlist>
```

**Description**

This command is used to display statistics about packets sent and received by ports specified in the `<portlist>`.

**Parameters**

- `<portlist>` – Specifies a port or range of ports to be displayed.

**Restrictions**

None.

Example usage:

To display the packets analysis for port 7 of module 2:
show packet ports 2

Command: show packet ports 2

Port Number : 2

<table>
<thead>
<tr>
<th>Frame Size</th>

---

show error ports

Purpose: Used to display the error statistics for a range of ports.

Syntax: show error ports <portlist>

Description: This command will display all of the packet error statistics collected and logged by the Switch for a given port list.

Parameters:

- `<portlist>` – Specifies a port or range of ports to be displayed.

Restrictions: None.

Example usage:

To display the errors of the port 3 of module 1:

DES-3028P:4#show error ports 3

Command: show error ports 3

Port Number : 3

<table>
<thead>
<tr>
<th>RX Frames</th>

63
show utilization

Purpose
Used to display real-time port and CPU utilization statistics.

Syntax
show utilization [cpu | ports {<portlist>}]

Description
This command will display the real-time port and CPU utilization statistics for the Switch.

Parameters
- **cpu** – Entering this parameter will display the current cpu utilization of the Switch.
- **ports** – Entering this parameter will display the current port utilization of the Switch.
  - **<portlist>** – Specifies a port or range of ports to be displayed.

Restrictions
None.

Example usage:

To display the port utilization statistics:

```
DES-3028P:4#show utilization ports
Command: show utilization ports

<table>
<thead>
<tr>
<th>Port</th>
<th>TX/sec</th>
<th>RX/sec</th>
<th>Util</th>
<th>Port</th>

To display the current CPU utilization:

```
DES-3028P:4#show utilization cpu
Command: show utilization cpu

CPU utilization:
----------------------------------------------------
Five seconds - 15%  One minute - 25%
```
clear counters

Purpose Used to clear the Switch's statistics counters.
Syntax `clear counters {ports <portlist>}`
Description This command will clear the counters used by the Switch to compile statistics.
Parameters `<portlist>` – Specifies a port or range of ports to be displayed.
Restrictions Only Administrator-level users can issue this command.

Example usage:
To clear the counters:

```
DES-3028P:4#clear counters ports 2-9
Command: clear counters ports 2-9
Success.
DES-3028P:4#
```

clear log

Purpose Used to clear the Switch's history log.
Syntax `clear log`
Description This command will clear the Switch's history log.
Parameters None.
Restrictions Only Administrator-level users can issue this command.

Example usage:
To clear the log information:

```
DES-3028P:4#clear log
Command: clear log
Success.
DES-3028P:4#
```

show log

Purpose Used to display the switch history log.
Syntax `show log {index <value_list X-Y>}`
Description This command will display the contents of the Switch's history log.
Parameters `index <value_list X-Y>` – This command will display the history log, beginning and ending at the value specified by the user in the `<value_list X-Y>` field. If no parameter is specified, all history log entries will be displayed.
show log

Restrictions None.

Example usage:

To display the switch history log:

```
DES-3028P:4#show log index 1-5
Command: show log index 1-5

Index    Data         Time                   Log Text
-----   -------------------   --------------------------------------------------------
5      00000-00-00 01:01:09   Successful login through Console (Username: Anonymous)
4      00000-00-00 00:00:14   System started up
3      00000-00-00 00:00:06   Port 1 link up, 100Mbps FULL duplex
2      00000-00-00 00:00:01   Spanning Tree Protocol is disabled
1      00000-00-00 00:06:31   Configuration saved to flash (Username: Anonymous)

DES-3028P:4#
```
DES-3028:4#disable syslog
Command: disable syslog
Success.
DES-3028:4#

### show syslog

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the syslog protocol status as enabled or disabled.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show syslog</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show syslog</code> command displays the syslog status as enabled or disabled.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To display the current status of the syslog function:

DES-3028:4#show syslog
Command: show syslog

Syslog Global State: Enabled

DES-3028:4#

### create syslog host

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create a new syslog host.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`create syslog host &lt;index 1-4&gt; ipaddress &lt;ipaddr&gt; {severity [informational</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>create syslog host</code> command is used to create a new syslog host.</td>
</tr>
</tbody>
</table>
| Parameters       | <index 1-4> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.  
ipaddress <ipaddr> – Specifies the IP address of the remote host where syslog messages will be sent.  
severity – Severity level indicator. These are described in the following:  
Bold font indicates that the corresponding severity level is currently supported on the Switch. |

<table>
<thead>
<tr>
<th>Numerical Code</th>
<th>Severity</th>

<tr>
<td>23</td>
<td>local use 7 (local7)</td>
</tr>
</tbody>
</table>

- **local0** – Specifies that local use 0 messages will be sent to the remote host. This corresponds to number 16 from the list above.
- **local1** – Specifies that local use 1 messages will be sent to the remote host. This corresponds to number 17 from the list above.
- **local2** – Specifies that local use 2 messages will be sent to the remote host. This corresponds to number 18 from the list above.
- **local3** – Specifies that local use 3 messages will be sent to the remote host. This corresponds to number 19 from the list above.
- **local4** – Specifies that local use 4 messages will be sent to the remote host. This corresponds to number 20 from the list above.
- **local5** – Specifies that local use 5 messages will be sent to the remote host. This corresponds to number 21 from the list above.
- **local6** – Specifies that local use 6 messages will be sent to the remote host. This corresponds to number 22 from the list above.
- **local7** – Specifies that local use 7 messages will be sent to the remote host. This corresponds to number 23 from the list above.

- **udp_port <udp_port_number>** – Specifies the UDP port number that the syslog protocol will use to send messages to the remote host.
- **state [enable | disable]** – Allows the sending of syslog messages to the remote host, specified above, to be enabled and disabled.

### Restrictions

Only Administrator-level users can issue this command.

---

Example usage:

To create syslog host:
**config syslog host**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the syslog protocol to send system log data to a remote host.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config syslog host [all</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config syslog host</code> command is used to configure the syslog protocol to send system log information to a remote host.</td>
</tr>
</tbody>
</table>
| Parameters       | `<index 1-4>` – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.  
`ipaddress <ipaddr>` – Specifies the IP address of the remote host where syslog messages will be sent.  
`severity` – Severity level indicator. These are described in the following:  
**Bold** font indicates that the corresponding severity level is currently supported on the Switch. |
| Numerical Code   | Severity                                                                 |
| 0                | Emergency: system is unusable                                               |
| 1                | Alert: action must be taken immediately                                       |
| 2                | Critical: critical conditions                                                |
| 3                | Error: error conditions                                                      |
| **4**            | **Warning: warning conditions**                                            |
| 5                | Notice: normal but significant condition                                     |
| **6**            | **Informational: informational messages**                                   |
| 7                | Debug: debug-level messages                                                 |

- `informational` – Specifies that informational messages will be sent to the remote host. This corresponds to number 6 from the list above.
- `warning` – Specifies that warning messages will be sent to the remote host. This corresponds to number 4 from the list above.
- `all` – Specifies that all of the currently supported syslog messages that are generated by the Switch will be sent to the remote host.
- `facility` – Some of the operating system daemons and processes have been assigned Facility values. Processes and daemons that have not been explicitly assigned a Facility may use any of the "local use" facilities or they may use the "user-level" Facility. Those Facilities that have been designated are shown in the following: Bold font indicates the facility values the Switch currently supports.

</tbody>
</table>

**Parameters**

- **local0** – Specifies that local use 0 messages will be sent to the remote host. This corresponds to number 16 from the list above.
- **local1** – Specifies that local use 1 messages will be sent to the remote host. This corresponds to number 17 from the list above.
- **local2** – Specifies that local use 2 messages will be sent to the remote host. This corresponds to number 18 from the list above.
- **local3** – Specifies that local use 3 messages will be sent to the remote host. This corresponds to number 19 from the list above.
- **local4** – Specifies that local use 4 messages will be sent to the remote host. This corresponds to number 20 from the list above.
- **local5** – Specifies that local use 5 messages will be sent to the remote host. This corresponds to number 21 from the list above.
- **local6** – Specifies that local use 6 messages will be sent to the remote host. This corresponds to number 22 from the list above.
- **local7** – Specifies that local use 7 messages will be sent to the remote host. This corresponds to number 23 from the list above.

- **udp_port <udp_port_number>** – Specifies the UDP port number that the syslog protocol will use to send messages to the remote host.
- **state [enable | disable]** – Allows the sending of syslog messages to the remote host, specified above, to be enabled and disabled.

**Restrictions**

Only Administrator-level users can issue this command.

**Example usage:**

To configure a Syslog host:
Example usage:

To configure a Syslog host for all hosts:

```
DES-3028P:4#config syslog host all severity all facility local0
Command: config syslog host all severity all facility local0
Success.
DES-3028P:4#
```

**delete syslog host**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to remove a syslog host that has been previously configured, from the Switch.</th>
</tr>

</tbody>
</table>
| Parameters         | <index 1-4> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.  
  all – Specifies that the command will be applied to all hosts. |
| Restrictions       | Only Administrator-level users can issue this command. |

Example usage:

To delete a previously configured syslog host:

```
DES-3028P:4#delete syslog host 4
Command: delete syslog host 4
Success.
DES-3028P:4#
```
show syslog host

Purpose
Used to display the syslog hosts currently configured on the Switch.

Syntax
show syslog host {<index 1-4>}

Description
The show syslog host command is used to display the syslog hosts that are currently configured on the Switch.

Parameters
<index 1-4> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.

Restrictions
None.

Example usage:
To show Syslog host information:

```
DES-3028P:4#show syslog host
Command: show syslog host

Syslog Global State: Disabled

<table>

config log_save_timing

Purpose
Used to configure the method of saving log files to the switch’s flash memory.

Syntax
config log_save_timing [time_interval <min 1-65535> | on_demand | log_trigger]

Description
The config log_save_timing command allows the user to configure the time method used in saving log files to the switch’s flash memory.

Parameters
time_interval <min 1-65535> – Use this parameter to configure the time interval that will be implemented for saving log files. The log files will be save every x number of minutes that are configured here.

on_demand – Users who choose this method will only save log files when they manually tell the Switch to do so, using the save or save log command.

log_trigger – Users who choose this method will have log files saved to the Switch every time a log event occurs on the Switch.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To configure the time interval as every 30 minutes for saving log files:
show log_save_timing

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the method configured for saving log files to the switch’s flash memory.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show log_save_timing</code></td>

<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the time interval for saving log files:

```
DES-3028P:4#show log_save_timing
Command: show log_save_timing

Saving log method: time_interval
    Interval : 30

DES-3028P:4#
```
MULTIPLE SPANNING TREE PROTOCOL (MSTP) COMMANDS

This Switch supports three versions of the Spanning Tree Protocol: 802.1D STP, 802.1w Rapid STP and 802.1s MSTP. Multiple Spanning Tree Protocol, or MSTP, is a standard defined by the IEEE community that allows multiple VLANs to be mapped to a single spanning tree instance, which will provide multiple pathways across the network. Therefore, these MSTP configurations will balance the traffic load, preventing wide scale disruptions when a single spanning tree instance fails. This will allow for faster convergences of new topologies for the failed instance. Frames designated for these VLANs will be processed quickly and completely throughout interconnected bridges utilizing either of the three spanning tree protocols (STP, RSTP or MSTP). This protocol will also tag BDPU packets so receiving devices can distinguish spanning tree instances, spanning tree regions and the VLANs associated with them. These instances will be classified by an instance_id. MSTP will connect multiple spanning trees with a Common and Internal Spanning Tree (CIST). The CIST will automatically determine each MSTP region, its maximum possible extent and will appear as one virtual bridge that runs a single spanning tree. Consequently, frames assigned to different VLANs will follow different data routes within administratively established regions on the network, continuing to allow simple and full processing of frames, regardless of administrative errors in defining VLANs and their respective spanning trees. Each switch utilizing the MSTP on a network will have a single MSTP configuration that will have the following three attributes:

a) A configuration name defined by an alphanumeric string of up to 32 characters (defined in the config stp mst_config_id command as name <string>).

b) A configuration revision number (named here as a revision_level) and;

c) A 4094 element table (defined here as a vid_range) which will associate each of the possible 4094 VLANs supported by the Switch for a given instance.

To utilize the MSTP function on the Switch, three steps need to be taken:

a) The Switch must be set to the MSTP setting (config stp version)

b) The correct spanning tree priority for the MSTP instance must be entered (config stp priority).

c) VLANs that will be shared must be added to the MSTP Instance ID (config stp instance_id).

The Multiple Spanning Tree Protocol commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable stp</td>

<tr>
<td>config stp mst_config_id</td>
<td>{revision_level &lt;int 0-65535&gt;</td>
</tr>
<tr>
<td>config stp mst_ports</td>
<td>&lt;portlist&gt; instance_id &lt;value 0-4&gt; {internalCost [auto</td>
</tr>
<tr>
<td>show stp</td>
<td></td>
</tr>
</tbody>
</table>
Each command is listed, in detail, in the following sections.

### enable stp

**Purpose**  
Used to globally enable STP on the Switch.

**Syntax**  
`enable stp`

**Description**  
This command allows the Spanning Tree Protocol to be globally enabled on the Switch.

**Parameters**  
None.

**Restrictions**  
Only Administrator-level users can issue this command.

**Example usage:**

To enable STP, globally, on the Switch:

```
DES-3028P:4#enable stp
Command: enable stp
Success.
DES-3028P:4#
```

### disable stp

**Purpose**  
Used to globally disable STP on the Switch.

**Syntax**  
`disable stp`

**Description**  
This command allows the Spanning Tree Protocol to be globally disabled on the Switch.

**Parameters**  
None.

**Restrictions**  
Only Administrator-level users can issue this command.

**Example usage:**

To disable STP on the Switch:

```
DES-3028P:4#disable stp
Command: disable stp
Success.
DES-3028P:4#
```

### config stp version

**Purpose**  
Used to globally set the version of STP on the Switch.

**Syntax**  
`config stp version [mstp | rstp | stp]`

**Description**  
This command allows the user to choose the version of the spanning tree to be implemented on the Switch.
config stp version

<table>
<thead>
<tr>
<th>Parameters</th>
<th>mstp – Selecting this parameter will set the Multiple Spanning Tree Protocol (MSTP) globally on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>rstp – Selecting this parameter will set the Rapid Spanning Tree Protocol (RSTP) globally on the Switch.</td>
</tr>
<tr>
<td></td>
<td>stp – Selecting this parameter will set the Spanning Tree Protocol (STP) globally on the Switch.</td>
</tr>
</tbody>
</table>

Restrictions Only Administrator-level users can issue this command.

Example usage:

To set the Switch globally for the Multiple Spanning Tree Protocol (MSTP):

```
DES-3028P:4#config stp version mstp
Command: config stp version mstp
Success.
DES-3028P:4#
```

config stp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to setup STP, RSTP and MSTP on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config stp {maxage &lt;value 6-40&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to setup the Spanning Tree Protocol (STP) for the entire Switch. All commands here will be implemented for the STP version that is currently set on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>maxage &lt;value 6-40&gt;</code> – This value may be set to ensure that old information does not endlessly circulate through redundant paths in the network, preventing the effective propagation of the new information. Set by the Root Bridge, this value will aid in determining that the Switch has spanning tree configuration values consistent with other devices on the bridged LAN. If the value ages out and a BPDU has still not been received from the Root Bridge, the Switch will start sending its own BPDU to all other switches for permission to become the Root Bridge. If it turns out that your switch has the lowest Bridge Identifier, it will become the Root Bridge. The user may choose a time between 6 and 40 seconds. The default value is 20.</td>
</tr>
<tr>
<td></td>
<td><code>maxhops &lt;value 6-40&gt;</code> – The number of hops between devices in a spanning tree region before the BPDU (bridge protocol data unit) packet sent by the Switch will be discarded. Each switch on the hop count will reduce the hop count by one until the value reaches zero. The Switch will then discard the BDPU packet and the information held for the port will age out. The user may set a hop count from 6 to 40. The default is 20.</td>
</tr>
<tr>
<td></td>
<td><code>hellotime &lt;value 1-2&gt;</code> – The user may set the time interval between transmission of configuration messages by the root device, thus stating that the Switch is still functioning. A time between 1 and 2 seconds may be chosen, with a default setting of 2 seconds.</td>
</tr>
</tbody>
</table>

**NOTE:** In MSTP, the spanning tree is configured by port and therefore, the `hellotime` must be set using the `configure stp ports` command for switches utilizing the Multiple Spanning Tree Protocol.

forwarddelay <value 4-30> – The maximum amount of time (in seconds) that the root device will wait before changing states. The user may
**config stp**

Choose a time between 4 and 30 seconds. The default is 15 seconds.

- **txholdcount 1-10** – The maximum number of BPDU Hello packets transmitted per interval. Default value = 6.
- **fbpdu [enable | disable]** – Allows the forwarding of STP BPDU packets from other network devices when STP is disabled on the Switch. The default is *enable*.
- **lbd [enable | disable]** – Enabling this feature temporarily block STP on the Switch when a BPDU packet has been looped back to the switch. When the Switch detects its own BPDU packet coming back, it signifies a loop on the network. STP will automatically be blocked and an alert will be sent to the administrator. The LBD STP port will restart (change to discarding state) when the **LBD Recover Time** times out. The default is *enabled*.
- **lbd_recover_timer [0 | <value 60-1000000>]** – This field will set the time the STP port will wait before recovering the STP state set. 0 will denote that the LBD will never time out or restart until the administrator personally changes it. The user may also set a time between 60 and 1000000 seconds. The default is 60 seconds.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To configure STP with maxage 18 and maxhops of 15:

```bash
DES-3028P:4#config stp maxage 18 maxhops 15
Command: config stp maxage 18 maxhops 15
Success.
DES-3028P:4#
```

**config stp ports**

- **Purpose**: Used to setup STP on the port level.
- **Description**: This command is used to create and configure STP for a group of ports.
- **Parameters**:
  - `<portlist>` – Specifies a range of ports to be configured.
  - `externalCost` – This defines a metric that indicates the relative cost of forwarding packets to the specified port list. Port cost can be set automatically or as a metric value. The default value is *auto*.
    - `auto` – Setting this parameter for the external cost will automatically set the speed for forwarding packets to the specified port(s) in the list for optimal efficiency. Default port cost: 100Mbps port = 200000. Gigabit port = 20000.
    - `<value 1-200000000>` – Define a value between 1 and 200000000 to determine the external cost. The lower the number, the greater the probability the port will be chosen to forward packets.
  - `hellotime <value 1-2>` – The time interval between transmission of configuration messages by the designated port, to other devices on the bridged LAN, thus stating that the Switch is still functioning. The user may choose a time between 1 and 2 seconds. The default is 2 seconds.
  - `migrate [yes | no]` – Setting this parameter as “yes” will set the ports to send out BDPU packets to other bridges, requesting information on their STP setting. If the
Switch is configured for RSTP, the port will be capable to migrate from 802.1D STP to 802.1w RSTP. If the Switch is configured for MSTP, the port is capable of migrating from 802.1D STP to 802.1s MSTP. RSTP and MSTP can coexist with standard STP, however the benefits of RSTP and MSTP are not realized on a port where an 802.1D network connects to an 802.1w or 802.1s enabled network. Migration should be set as yes on ports connected to network stations or segments that are capable of being upgraded to 802.1w RSTP or 802.1s MSTP on all or some portion of the segment.

**edge [true | false | auto] – true** designates the port as an edge port. Edge ports cannot create loops, however an edge port can lose edge port status if a topology change creates a potential for a loop. An edge port normally should not receive BPDU packets. If a BPDU packet is received it automatically loses edge port status. **false** indicates that the port does not have edge port status. **auto** allows the port to have p2p status whenever possible and operate as if the p2p status were **true**. If the port cannot maintain this status (for example if the port is forced to half-duplex operation) the p2p status changes to operate as if the p2p value were **false**. The default setting for this parameter is **auto**.

**state [enable | disable] – Allows STP to be enabled or disabled for the ports specified in the port list. The default is enable.**

**restricted_role – To decide if this is to be selected as the Root Port. The default value is false.**

**restricted_tcn – To decide if this port is to propagate topology change. The default value is false.**

**lbd [enable | disable] – Used to enable or disable the loop-back detection function on the switch for the ports configured above in the config stp command.**

**fbpdu [enable | disable] – When enabled, this allows the forwarding of STP BPDU packets from other network devices when STP is disabled in the specified ports. If users want to enable Forwarding BPDU on a per port basis, the following settings must first be in effect: 1. STP must be globally disabled and 2. Forwarding BPDU must be globally enabled. To globally disable STP, use the disable stp command, to globally enable fbpdu, use the config stp command. The default is enable.**

**Restrictions**

Only Administrator-level users can issue this command.
Example usage:
To configure STP with path cost auto, hellotime set to 2 seconds, migration enable, and state enable for ports 1-2 of module 1.

```
DES-3028P:4#config stp ports 1-2 externalCost auto hellotime 2 migrate enable
Command: config stp ports 1-2 externalCost auto hellotime 2 migrate enable
DES-3028P:4#
```

### create stp instance_id

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create a STP instance ID for MSTP.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>create stp instance_id &lt;value 1-4&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command allows the user to create a STP instance ID for the Multiple Spanning Tree Protocol. There are 5 STP instances on the Switch (one internal CIST, unchangeable) and the user may create up to 4 instance IDs for the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;value 1-4&gt;</code> – Enter a value between 1 and 4 to identify the Spanning Tree instance on the Switch.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:
To create a spanning tree instance 2:

```
DES-3028P:4#create stp instance_id 2
Command: create stp instance_id 2
Success.
DES-3028P:4#
```

### config stp instance_id

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to add or delete an STP instance ID.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config stp instance_id &lt;value 1-4&gt; [add_vlan</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to map VIDs (VLAN IDs) to previously configured STP instances on the Switch by creating an <code>instance_id</code>. A STP instance may have multiple members with the same MSTP configuration. There is no limit to the number of STP regions in a network but each region only supports a maximum of 16 spanning tree instances (one unchangeable default entry). VIDs can belong to only one spanning tree instance at a time.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;value 1-4&gt;</code> – Enter a number between 1 and 4 to define the <code>instance_id</code>. The Switch supports 16 STP instances with one unchangeable default instance ID set as 0. <code>&lt;add_vlan&gt;</code> – Along with the <code>vid_range &lt;vidlist&gt;</code> parameter, this command allows adding a VLAN to an instance. <code>&lt;remove_vlan&gt;</code> – Along with the <code>vid_range &lt;vidlist&gt;</code> parameter, this command allows removing a VLAN from an instance.</td>
</tr>
</tbody>
</table>

NOTE: Switches in the same spanning tree region having the same STP `instance_id` must be mapped identically, and have the same configuration `revision_level` number and the same `name`. |
config stp instance_id

This command will add VIDs to the previously configured STP instance_id.

Syntax:
config stp instance_id

Description:
Along with the vid_range <vidlist> parameter, this command will remove VIDs to the previously configured STP instance_id.

Restrictions:
Only Administrator-level users can issue this command.

Example usage:
To configure instance ID 2 to add VID 10:

```
DES-3028P:4#config stp instance_id 2 add_vlan 10
Command : config stp instance_id 2 add_vlan 10
Success.
DES-3028P:4#
```

Example usage:
To remove VID 10 from instance ID 2:

```
DES-3028P:4#config stp instance_id 2 remove_vlan 10
Command : config stp instance_id 2 remove_vlan 10
Success.
DES-3028P:4#
```

delete stp instance_id

Purpose:
Used to delete a STP instance ID from the Switch.

Syntax:
delete stp instance_id <value 1-4>

Description:
This command allows the user to delete a previously configured STP instance ID from the Switch.

Parameters:
<value 1-4> – Enter a value between 1 and 4 to identify the Spanning Tree instance on the Switch.

Restrictions:
Only Administrator-level users can issue this command.

Example usage:
To delete STP instance ID 2 from the Switch.

```
DES-3028P:4#delete stp instance_id 2
Command: delete stp instance_id 2
Success.
DES-3028P:4#
```
### config stp priority

**Purpose**
Used to update the STP instance configuration

**Syntax**
```
config stp priority <value 0-61440> instance_id <value 0-4>
```

**Description**
This command is used to update the STP instance configuration settings on the Switch. The MSTP will utilize the priority in selecting the root bridge, root port and designated port. Assigning higher priorities to STP regions will instruct the Switch to give precedence to the selected `instance_id` for forwarding packets. The lower the priority value set, the higher the priority.

**Parameters**
- `priority <value 0-61440>` – Select a value between 0 and 61440 to specify the priority for a specified instance ID for forwarding packets. The lower the value, the higher the priority. This entry must be divisible by 4096.
- `instance_id <value 0-4>` – Enter the value corresponding to the previously configured instance ID of which the user wishes to set the priority value. An instance id of 0 denotes the default `instance_id` (CIST) internally set on the Switch.

**Restrictions**
- Only Administrator-level users can issue this command.

**Example usage:**

To set the priority value for `instance_id` 2 as 4096.

```
DES-3028P:4#config stp priority 4096 instance_id 2
Command : config stp priority 4096 instance_id 2
Success.
DES-3028P:4#
```

### config stp mst_config_id

**Purpose**
Used to update the MSTP configuration identification.

**Syntax**
```
config stp mst_config_id {revision_level <int 0-65535> | name <string 32>}
```

**Description**
This command will uniquely identify the MSTP configuration currently configured on the Switch. Information entered here will be attached to BPU packets as an identifier for the MSTP region to which it belongs. Switches having the same `revision_level` and `name` will be considered as part of the same MSTP region.

**Parameters**
- `revision_level <int 0-65535>` – Enter a number between 0 and 65535 to identify the MSTP region. This value, along with the name will identify the MSTP region configured on the Switch. The default setting is 0.
- `name <string 32>` – Enter an alphanumeric string of up to 32 characters to uniquely identify the MSTP region on the Switch. This name, along with the `revision_level` value will identify the MSTP region configured on the Switch. If no `name` is entered, the default name will be the MAC address of the device.

**Restrictions**
- Only Administrator-level users can issue this command.

**Example usage:**

To configure the MSTP region of the Switch with `revision_level` 10 and the `name` “Trinity”:

```
```
config stp mst_ports

Purpose: Used to update the port configuration for a MSTP instance.

Syntax: config stp mst_ports <portlist> instance_id <value 0-4> {internalCost [auto | <value 1-20000000>]} priority <value 0-240>

Description: This command will update the port configuration for a STP instance_id. If a loop occurs, the MSTP function will use the port priority to select an interface to put into the forwarding state. Set a higher priority value for interfaces to be selected for forwarding first. In instances where the priority value is identical, the MSTP function will implement the lowest MAC address into the forwarding state and other interfaces will be blocked. Remember that lower priority values mean higher priorities for forwarding packets.

Parameters:
- <portlist> – Specifies a port or range of ports to be configured.
- instance_id <value 0-4> – Enter a numerical value between 0 and 4 to identify the instance_id previously configured on the Switch. An entry of 0 will denote the CIST (Common and Internal Spanning Tree).
- internalCost – This parameter is set to represent the relative cost of forwarding packets to specified ports when an interface is selected within a STP instance. The default setting is auto. There are two options:
  - auto – Selecting this parameter for the internalCost will set quickest route automatically and optimally for an interface. The default value is derived from the media speed of the interface.
  - value 1-200000000 – Selecting this parameter with a value in the range of 1-200000000 will set the quickest route when a loop occurs. A lower internalCost represents a quicker transmission.
- priority <value 0-240> – Enter a value between 0 and 240 to set the priority for the port interface. A higher priority will designate the interface to forward packets first. A lower number denotes a higher priority.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To designate ports 1 through 5, with instance id 2, to have an auto internalCost and a priority of 16:

DES-3028P:4#config stp mst_ports 1-5 instance_id 2 internalCost auto priority 16
Command : config stp mst_ports 1-5 instance_id 2 internalCost auto priority 16
Success.

DES-3028P:4#
show stp

Purpose Used to display the Switch’s current STP configuration.

Syntax show stp

Description This command displays the Switch’s current STP configuration.

Parameters None

Restrictions None.

Example usage:

To display the status of STP on the Switch:

**Status 1: STP enabled with STP compatible version**

```
DES-3028P:4#show stp
Command: show stp

STP Bridge Global Settings
---------------------------
STP Status         : Enabled
STP Version        : STP compatible
Max Age            : 20
Hello Time         : 2
Forward Delay      : 15
Max Hops           : 20
TX Hold Count      : 6
Forwarding BPDU    : Enabled
Loopback Detection : Enabled
LBD Recover Time   : 60

DES-3028P:4#
```

**Status 2: STP enabled for RSTP**

```
DES-3028P:4#show stp
Command: show stp

STP Bridge Global Settings
---------------------------
STP Status                 : Enabled
STP Version                : RSTP
Max Age                    : 20

DES-3028P:4#
```

**Status 3: STP enabled for MSTP**

```
DES-3028P:4#show stp
Command: show stp

DES-3028P:4#
```
show stp ports

Purpose: Used to display the Switch’s current STP ports configuration.

Syntax: `show stp ports {<portlist>} {instance <value 0-4>}`

Description: This command displays the STP ports settings for a specified port or group of ports (one port at a time).

Parameters:
- `<portlist>` – Specifies a port or range of ports to be viewed. Information for a single port is displayed. If no ports are specified, the STP information for port 1 will be displayed. Users may use the Space bar, p and n keys to view information for the remaining ports.

Restrictions: None.

Example usage:

To show STP ports information for port 1 (STP enabled on Switch):

```
DES-3028P:4#show stp ports
Command: show stp ports
MSTP Port Information
----------------------
Port Index     : 1     , Hello Time: 2 /2 , Port STP Enabled  , LBD : No
Restricted role   : False,  Restricted TCN : False
External PathCost : Auto/200000   , Edge Port : False/No , P2P : Auto /Yes
Port Forward BPDU : Enabled
MSTI   Designated Bridge   Internal PathCost  Prio  Status      Role
-----  ------------------  -----------------  ----  ----------  ----------
0      N/A                 200000             128   Disabled    Disabled
```
**show stp instance_id**

configuration for the CIST internally set on the Switch.

Restrictions None

Example usage:

To display the STP instance configuration for instance 0 (the internal CIST) on the Switch:

```
DES-3028P:4#show stp instance 0
Command: show stp instance 0

STP Instance Settings
-------------------------
Instance Type : CIST
Instance Status : Enabled
Instance Priority : 32768 (bridge priority : 32768, sys ID ext : 0 )

STP Instance Operational Status

Root Port : 1
Max Age : 20
Forward Delay : 15
Last Topology Change : 856
Topology Changes Count : 2987
```

**show stp mst_config_id**

Purpose Used to display the MSTP configuration identification.

Syntax `show stp mst_config_id`

Description This command displays the Switch’s current MSTP configuration identification.

Parameters None.

Restrictions None.

Example usage:

To show the MSTP configuration identification currently set on the Switch:
DES-3028P:4# show stp mst_config_id
Command: show stp mst_config_id

Current MST Configuration Identification
-----------------------------------------------

Configuration Name : [00:53:13:1A:33:24] Revision Level : 0
MSTI ID VID list

DES-3028P:4#
FORWARDING DATABASE COMMANDS

The layer 2 forwarding database commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create fdb</td>
<td>&lt;vlan_name 32&gt; &lt;macaddr&gt; port &lt;port&gt;</td>
</tr>
<tr>
<td>create multicast_fdb</td>
<td>&lt;vlan_name 32&gt; &lt;macaddr&gt;</td>
</tr>
<tr>
<td>config multicast_fdb</td>
<td>&lt;vlan_name 32&gt; &lt;macaddr&gt; [add</td>
</tr>
<tr>
<td>config fdb aging_time</td>
<td>&lt;sec 10-1000000&gt;</td>
</tr>
<tr>
<td>delete fdb</td>
<td>&lt;vlan_name 32&gt; &lt;macaddr&gt;</td>
</tr>
<tr>
<td>clear fdb</td>
<td>[vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show multicast_fdb</td>
<td>{vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show fdb</td>
<td>{port &lt;port&gt;</td>
</tr>
<tr>
<td>config multicast</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>port_filtering_mode</td>
<td></td>
</tr>
<tr>
<td>show multicast</td>
<td></td>
</tr>
<tr>
<td>port_filtering_mode</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create fdb**

**Purpose**
Used to create a static entry to the unicast MAC address forwarding table (database).

**Syntax**
create fdb <vlan_name 32> <macaddr> port <port>

**Description**
This command will make an entry into the Switch’s unicast MAC address forwarding database.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN on which the MAC address resides.
- `<macaddr>` – The MAC address that will be added to the forwarding table.
- `<port>` – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To create a unicast MAC FDB entry:

```bash
to create a unicast MAC FDB entry:
```
DES-3028P:4# create fdb default 00-00-00-00-01-02
port 5
Command: create fdb default 00-00-00-00-01-02 port 5
Success.
DES-3028P:4#

### create multicast_fdb

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create a static entry to the multicast MAC address forwarding table (database)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>create multicast_fdb &lt;vlan_name 32&gt; &lt;macaddr&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command will make an entry into the Switch's multicast MAC address forwarding database.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;vlan_name 32&gt; – The name of the VLAN on which the MAC address resides. &lt;macaddr&gt; – The MAC address that will be added to the forwarding table.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To create multicast MAC forwarding:

DES-3028P:4# create multicast_fdb default 01-00-00-00-00-01
Command: create multicast_fdb default 01-00-00-00-00-01
Success.
DES-3028P:4#

### config multicast_fdb

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the Switch’s multicast MAC address forwarding database.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config multicast_fdb &lt;vlan_name 32&gt; &lt;macaddr&gt; [add</td>
</tr>
<tr>
<td>Description</td>
<td>This command configures the multicast MAC address forwarding table.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;vlan_name 32&gt; – The name of the VLAN on which the MAC address resides. &lt;macaddr&gt; – The MAC address that will be added to the multicast forwarding table. [add</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To add multicast MAC forwarding:
config fdb aging_time

**Purpose:**
Used to set the aging time of the forwarding database.

**Syntax:**
config fdb aging_time <sec 10-1000000>

**Description:**
The aging time affects the learning process of the Switch. Dynamic forwarding table entries, which are made up of the source MAC addresses and their associated port numbers, are deleted from the table if they are not accessed within the aging time. The aging time can be from 10 to 1000000 seconds with a default value of 300 seconds. A very long aging time can result in dynamic forwarding table entries that are out-of-date or no longer exist. This may cause incorrect packet forwarding decisions by the Switch. If the aging time is too short however, many entries may be aged out too soon. This will result in a high percentage of received packets whose source addresses cannot be found in the forwarding table, in which case the Switch will broadcast the packet to all ports, negating many of the benefits of having a switch.

**Parameters:**
- `<sec 10-1000000>` – The aging time for the MAC address forwarding database value. The value in seconds may be between 10 and 1000000 seconds.

**Restrictions:**
Only Administrator-level users can issue this command.

Example usage:
To set the fdb aging time:

```
DES-3028P:4#config fdb aging_time 300
Command: config fdb aging_time 300
Success.

DES-3028P:4#
```
**delete fdb**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete an entry to the Switch’s forwarding database.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>delete fdb &lt;vlan_name 32&gt; &lt;macaddr&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to delete a previous entry to the Switch’s forwarding database.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vlan_name 32&gt;</code> – The name of the VLAN on which the MAC address resides.</td>
</tr>
<tr>
<td></td>
<td><code>&lt;macaddr&gt;</code> – The MAC address that will be added to the forwarding table.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete a permanent FDB entry:

```
DES-3028P:4#delete fdb default 00-00-00-00-01-02
Command: delete fdb default 00-00-00-00-01-02
Success.
DES-3028P:4#
```

To delete a multicast FDB entry:

```
DES-3028P:4#delete fdb default 01-00-00-00-01-02
Command: delete fdb default 01-00-00-00-01-02
Success.
DES-3028P:4#
```

**clear fdb**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to clear the Switch’s forwarding database of all dynamically learned MAC addresses.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`clear fdb [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to clear dynamically learned entries to the Switch’s forwarding database.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vlan_name 32&gt;</code> – The name of the VLAN on which the MAC address resides.</td>
</tr>
<tr>
<td></td>
<td><code>port &lt;port&gt;</code> – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</td>
</tr>
<tr>
<td></td>
<td><code>all</code> – Clears all dynamic entries to the Switch’s forwarding database.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To clear all FDB dynamic entries:

```
DES-3028P:4#clear fdb all
Command: clear fdb all
```
Success.

DES-3028P:4#

### show multicast_fdb

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the contents of the Switch’s multicast forwarding database.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show multicast_fdb [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display the current contents of the Switch’s multicast MAC address forwarding database.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;vlan_name 32&gt; – The name of the VLAN on which the MAC address resides.</td>
</tr>
<tr>
<td></td>
<td>&lt;macaddr&gt; – The MAC address that is present in the forwarding database table.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

#### Example usage:

To display multicast MAC address table:

```
DES-3028P:4#show multicast_fdb vlan default
Command: show multicast_fdb vlan default
VLAN Name : default
MAC Address : 01-00-5E-00-00-00
Egress Ports : 1-5
Mode : Static
Total Entries : 1
```

### show fdb

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current unicast MAC address forwarding database.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show fdb {port &lt;port&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the current contents of the Switch’s forwarding database.</td>
</tr>
<tr>
<td>Parameters</td>
<td>port &lt;port&gt; – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</td>
</tr>
<tr>
<td></td>
<td>&lt;vlan_name 32&gt; – The name of the VLAN on which the MAC address resides.</td>
</tr>
<tr>
<td></td>
<td>&lt;vid&gt; – Displays the entries for the VLANs indicated by vid list.</td>
</tr>
<tr>
<td></td>
<td>&lt;macaddr&gt; – The MAC address that is present in the forwarding database table.</td>
</tr>
<tr>
<td></td>
<td>static – Displays the static MAC address entries.</td>
</tr>
<tr>
<td></td>
<td>aging_time – Displays the aging time for the MAC address forwarding database.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>
Example usage:

To display unicast MAC address table:

```
DES-3028P:4#show fdb
Command: show fdb

Unicast MAC Address Ageing Time = 300

<table>
<thead>
<tr>
<th>VID</th>
<th>VLAN Name</th>

</tr>
</tbody>
</table>
```

Example usage:

To configure the multicast filtering mode to forward all groups on ports 1 through 4.

```
config multicast port_filtering_mode
Purpose Used to configure the multicast packet filtering mode on a port per port basis.
Syntax config multicast port_filtering_mode [<portlist> | all] [forward_unregistered_groups | filter_unregistered_groups]
Description This command will configure the multicast packet filtering mode for specified ports on the Switch.
Parameters [<portlist> | all] – Enter a port or list of ports for which to configure the multicast port filtering mode. Entering the all parameter will denote all ports on the switch.
[forward_unregistered_groups | filter_unregistered_groups] – The user may set the filtering mode to any of these three options.
Restrictions Only Administrator-level users can issue this command.
```
show multicast port_filtering_mode

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show the multicast packet filtering mode on a port per port basis.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show multicast port_filtering_mode</td>

</tr>
</tbody>
</table>

DES-3028P:4#
**BROADCAST STORM CONTROL COMMANDS**

On a computer network, packets such as Multicast packets and Broadcast packets continually flood the network as normal procedure. At times, this traffic may increase due to a malicious endstation on the network or a malfunctioning device, such as a faulty network card. Thus, switch throughput problems will arise and consequently affect the overall performance of the switch network. To help rectify this packet storm, the Switch will monitor and control the situation.

The packet storm is monitored to determine if too many packets are flooding the network, based on the threshold level provided by the user. Once a packet storm has been detected, the Switch will drop packets coming into the switch until the storm has subsided. This method can be utilized by selecting the *Drop* option of the *Action* field in the table below. The Switch will also scan and monitor packets coming into the Switch by monitoring the Switch’s chip counter. This method is only viable for Broadcast and Multicast storms because the chip only has counters for these two types of packets. Once a storm has been detected (that is, once the packet threshold set below has been exceeded), the Switch will shutdown the port to all incoming traffic with the exception of STP BPDU packets, for a time period specified using the CountDown field. If this field times out and the packet storm continues, the port will be placed in a Rest mode which will produce a warning message to be sent to the Trap Receiver. Once in Rest mode, the only methods of recovering this port are (1) auto-recovery after 5 minutes or (2) to manually recoup it using the *Port Configuration* window in the *Administration* folder and selecting the disabled port and returning it to an Enabled status. To utilize this method of Storm Control, choose the *Shutdown* option of the *Action* field in the table below.

The broadcast storm control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config traffic control</td>
<td>`&lt;&lt;portlist&gt;</td>
</tr>
<tr>
<td>show traffic control</td>
<td>`{&lt;portlist&gt;}&gt;</td>
</tr>
<tr>
<td>config traffic trap</td>
<td>[none</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config traffic control

**Purpose**

Used to configure broadcast/multicast/unicast packet storm control. The software mechanism is provided to monitor the traffic rate in addition to the hardware storm control mechanism previously provided.

**Syntax**

```
config traffic control `<<portlist> | all {broadcast [enable | disable] | multicast [enable | disable] | unicast [enable | disable] | action [drop | shutdown] | threshold <value 64-1000000> | time_interval <secs 5-30> | countdown [<minutes 0> | <minutes 5-30>]>}
```

**Description**

This command is used to configure broadcast/multicast/unicast storm control. By adding the new software traffic control mechanism, the user can now use both a hardware and software mechanism, the latter of which will now provide shutdown, recovery and trap notification functions for the Switch.

**Parameters**

- `<portlist>` – Used to specify a range of ports to be configured for traffic control.
  - *all* – Specifies all ports are to be configured for traffic control on the Switch.
  - *broadcast [enable | disable]* – Enables or disables broadcast storm control.
  - *multicast [enable | disable]* – Enables or disables multicast storm control.
  - *unicast [enable | disable]* – Enables or disables Unknown unicast traffic control.
  - *action* – Used to configure the action taken when a storm control has been
config traffic control

detected on the Switch. The user has two options:

*drop* – Utilizes the hardware Traffic Control mechanism, which means the Switch’s hardware will determine the Packet Storm based on the Threshold value stated and drop packets until the issue is resolved.

*shutdown* – Utilizes the Switch’s software Traffic Control mechanism to determine the Packet Storm occurring. Once detected, the port will deny all incoming traffic to the port except STP BPDU packets, which are essential in keeping the Spanning Tree operational on the Switch. If the countdown timer has expired and yet the Packet Storm continues, the port will be placed in Rest mode and is no longer operational until (1) auto-recovery after 5 minutes or (2) the user manually resets the port using the `config ports 1 state disable` and `config ports 1 state enable` command. Choosing this option obligates the user to configure the `time_interval` field as well, which will provide packet count samplings from the Switch’s chip to determine if a Packet Storm is occurring.

*threshold <value 64-1000000>* – The upper threshold at which the specified traffic control is switched on. The `<value>` is the number of broadcast/multicast/Unknown unicast packets, in Kbits per second (Kbit/sec), received by the Switch that will trigger the storm traffic control measures. The default setting is 64 Kbit/sec.

*time_interval* – The Interval will set the time between Multicast and Broadcast packet counts sent from the Switch’s chip to the Traffic Control function. These packet counts are the determining factor in deciding when incoming packets exceed the Threshold value.

*secs 5-30* – The Interval may be set between 5 and 30 seconds with the default setting of 5 seconds.

*countdown* – The countdown timer is set to determine the amount of time, in minutes, that the Switch will wait before shutting down the port that is experiencing a traffic storm. This parameter is only useful for ports configured as `shutdown` in the *action* field of this command and therefore will not operate for Hardware based Traffic Control implementations.

*minutes 0 – 0* is the default setting for this field and 0 will denote that the port will never shutdown.

*minutes 5-30* – Select a time from 5 to 30 minutes that the Switch will wait before shutting down. Once this time expires and the port is still experiencing packet storms, the port will be placed in rest mode and can only be manually recovered using the config ports command mentioned previously in this manual.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To configure traffic control and enable broadcast storm control for ports 1-12:

```
DES-3028P:4# config traffic control 1-12 broadcast enable action shutdown threshold 64 countdown 10 time_interval 10
Command: config traffic control 1-12 broadcast enable action shutdown threshold 64 countdown 10 time_interval 10
Success.
```
**show traffic control**

**Purpose**
Used to display current traffic control settings.

**Syntax**
`show traffic control { <portlist> }`

**Description**
This command displays the current storm traffic control configuration on the Switch.

**Parameters**
- `<portlist>` – Used to specify port or list of ports for which to display traffic control settings. The beginning and end of the port list range are separated by a dash.

**Restrictions**
None.

Example usage:
To display traffic control setting for ports 1-4:

```
DES-3028P:4#show traffic control 1-4
Command: show traffic control 1-4

Traffic Storm Control Trap : [None]

<table>

**config traffic trap**

**Purpose**
Used to configure the trap settings for the packet storm control mechanism.

**Syntax**
`config traffic trap [none | storm_occurred | storm_cleared | both]`

**Description**
This command will configure how packet storm control trap messages will be used when a packet storm is detected by the Switch. This function can only be used for the software traffic storm control mechanism (when the `action` field in the `config traffic control` command is set as `shutdown`).

**Parameters**
- `none` – No notification will be generated or sent when a packet storm control is detected by the Switch.
- `storm_occurred` – A notification will be generated and sent when a packet storm has been detected by the Switch.
- `storm_cleared` – A notification will be generated and sent when a packet storm has been cleared by the Switch.
- `both` – A notification will be generated and sent when a packet storm has been detected and cleared by the Switch.

**Restrictions**
Only Administrator-level users can issue this command.
Example usage:

To configure notifications to be sent when a packet storm control has been detected and cleared by the Switch.

```
DES-3028P:4# config traffic trap both
Command: config traffic trap both
Success.
DES-3028P:4#
```
The DES-3028/28G/28P/52/52P supports 802.1p priority queuing. The Switch has four priority queues. These priority queues are numbered from 3 (Class 3) — the highest priority queue — to 0 (Class 0) — the lowest priority queue. The eight priority tags specified in IEEE 802.1p (p0 to p7) are mapped to the Switch’s priority queues as follows:

- Priority 0 is assigned to the Switch’s Q1 queue.
- Priority 1 is assigned to the Switch’s Q0 queue.
- Priority 2 is assigned to the Switch’s Q0 queue.
- Priority 3 is assigned to the Switch’s Q1 queue.
- Priority 4 is assigned to the Switch’s Q2 queue.
- Priority 5 is assigned to the Switch’s Q2 queue.
- Priority 6 is assigned to the Switch’s Q3 queue.
- Priority 7 is assigned to the Switch’s Q3 queue.

Priority scheduling is implemented by the priority queues stated above. The Switch will empty the four hardware priority queues in order, beginning with the highest priority queue, 3, to the lowest priority queue, 0. Each hardware queue will transmit all of the packets in its buffer before permitting the next lower priority to transmit its packets. When the lowest hardware priority queue has finished transmitting all of its packets, the highest hardware priority queue will begin transmitting any packets it may have received.

The commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config bandwidth_control</td>
<td>[&lt;portlist&gt;] {rx_rate [no_limit</td>
</tr>
<tr>
<td>show bandwidth_control</td>
<td>&lt;portlist&gt;</td>
</tr>
<tr>
<td>config scheduling</td>
<td>&lt;class_id 0-3&gt; {weight &lt;value 1-55&gt;}</td>
</tr>
<tr>
<td>config scheduling_mechanism</td>
<td>[strict</td>
</tr>
<tr>
<td>show scheduling</td>
<td></td>
</tr>
<tr>
<td>show scheduling_mechanism</td>
<td></td>
</tr>
<tr>
<td>config 802.1p user_priority</td>
<td>&lt;priority 0-7&gt; &lt;class_id 0-3&gt;</td>
</tr>
<tr>
<td>show 802.1p user_priority</td>
<td></td>
</tr>
<tr>
<td>config 802.1p default_priority</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show 802.1p default_priority</td>
<td>&lt;portlist&gt;</td>
</tr>
<tr>
<td>config cos mapping port</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show cos mapping</td>
<td>{port &lt;portlist&gt;}</td>
</tr>
<tr>
<td>config cos port_mapping</td>
<td>[class [ 0(1)</td>
</tr>
<tr>
<td>show cos port_mapping</td>
<td>{port &lt;portlist&gt;}</td>
</tr>
<tr>
<td>config cos mac_mapping</td>
<td>destination_addr &lt;macaddr&gt; [class &lt;class_id 0-3&gt;]</td>
</tr>
<tr>
<td>show cos mac_mapping</td>
<td>{destination_addr &lt; macaddr &gt; }</td>
</tr>
<tr>
<td>config cos tos value</td>
<td>&lt;value 0-7&gt; [class &lt;class_id 0-3&gt;]</td>
</tr>
<tr>
<td>show cos tos</td>
<td>{value &lt;value 0-7&gt;}</td>
</tr>
<tr>
<td>config dscp_mapping</td>
<td>dscp_value &lt;value 0-63&gt; [class &lt;class_id 0-3&gt;]</td>
</tr>
<tr>
<td>show dscp_mapping</td>
<td>{dscp_value &lt;value 0-63&gt; }</td>
</tr>
</tbody>
</table>
Each command is listed, in detail, in the following sections.

### `config bandwidth_control`

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure bandwidth control on a port by-port basis.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config bandwidth_control [&lt;portlist&gt;] {rx_rate [no_limit</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config bandwidth_control</code> command is used to configure bandwidth on a port by-port basis.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specifies a port or range of ports to be configured.</td>
</tr>
<tr>
<td></td>
<td><code>rx_rate</code> – Specifies that one of the parameters below (no_limit or &lt;value 64-1024000&gt;) will be applied to the rate at which the above specified ports will be allowed to receive packets</td>
</tr>
<tr>
<td></td>
<td>- <code>no_limit</code> – Specifies that there will be no limit on the rate of packets received by the above specified ports.</td>
</tr>
<tr>
<td></td>
<td>- <code>&lt;value 64-1024000&gt;</code> – Specifies the traffic limit, in Kbits, that the above ports will be allowed to receive.</td>
</tr>
<tr>
<td></td>
<td><code>tx_rate</code> – Specifies that one of the parameters below (no_limit or &lt;value 64-1024000&gt;) will be applied to the rate at which the above specified ports will be allowed to transmit packets.</td>
</tr>
<tr>
<td></td>
<td>- <code>no_limit</code> – Specifies that there will be no limit on the rate of packets received by the above specified ports.</td>
</tr>
<tr>
<td></td>
<td>- <code>&lt;value 64-1024000&gt;</code> – Specifies the traffic limit, in Kbits, that the above ports will be allowed to receive.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To configure bandwidth control:

```
DES-3028P:4#config bandwidth_control 1 rx_rate 64
Command: config bandwidth_control 1 rx_rate 64

Note: To perform precise bandwidth control, it is required to enable the flow control to mitigate the retransmission of TCP traffic.

Success.
```

### `show bandwidth_control`

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the bandwidth control table.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show bandwidth_control [&lt;portlist&gt;]</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show bandwidth_control</code> command displays the current bandwidth control configuration on the Switch, on a port-by-port basis.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specifies a port or range of ports to be viewed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To display bandwidth control settings:

```
DES-3028P:4#show bandwidth_control 1
```

99
**DES-3028P:4#**

Command: `show bandwidth_control 1-5`

**Bandwidth Control Table**

<table>
<thead>
<tr>
<th>Port</th>
<th>RX Rate</th>
<th>TX Rate</th>
<th>Effective RX</th>
<th>Effective TX</th>
</tr>
</thead>
<tbody>

</tbody>
</table>

**config scheduling**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the traffic scheduling mechanism for each COS queue.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>config scheduling &lt;class_id 0-3&gt; [weight &lt;value 1-55&gt;]</strong></td>
</tr>
</tbody>
</table>
| Description      | The Switch contains four hardware priority queues. Incoming packets must be mapped to one of these four queues. This command is used to specify the rotation by which these four hardware priority queues are emptied. The Switch’s default (if the config scheduling command is not used) is to empty the four hardware priority queues in order – from the highest priority queue (hardware queue 3) to the lowest priority queue (hardware queue 0). Each hardware queue will transmit all of the packets in its buffer before allowing the next lower priority queue to transmit its packets. When the lowest hardware priority queue has finished transmitting all of its packets, the highest hardware priority queue can again transmit any packets it may have received. The weight <value 1-55> – Specifies the weights for weighted COS queuing. A value between 1 and 55 can be specified.  

<table>
<thead>
<tr>
<th>Parameters</th>
<th>&lt;class_id 0-3&gt; – This specifies which of the four hardware priority queues the config scheduling command will apply to. The four hardware priority queues are identified by number – from 0 to 3 – with the 0 queue being the lowest priority.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the traffic scheduling mechanism for each queue:

**DES-3028P:4# config scheduling 0 weight 55**  
Command: `config scheduling 0 weight 55`  
Success.

**DES-3028P:4#**
show scheduling

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the currently configured traffic scheduling on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show scheduling</td>
</tr>
<tr>
<td>Description</td>
<td>The show scheduling command will display the current traffic scheduling mechanisms in use on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the current scheduling configuration:

```
DES-3028P:4# show scheduling
Command: show scheduling

QOS Output Scheduling

<table>
<thead>
<tr>
<th>Class ID</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>Class-0</td>
<td>1</td>
</tr>
<tr>
<td>Class-1</td>
<td>2</td>
</tr>
<tr>
<td>Class-2</td>
<td>4</td>
</tr>
<tr>
<td>Class-3</td>
<td>8</td>
</tr>
</tbody>
</table>

DES-3028P:4#
```

config scheduling_mechanism

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the scheduling mechanism for the QoS function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config scheduling_mechanism [strict</td>
</tr>
<tr>
<td>Description</td>
<td>The config scheduling_mechanism command allows the user to select between a weight fair and a Strict mechanism for emptying the priority classes of service of the QoS function. The Switch contains seven hardware priority classes of service. Incoming packets must be mapped to one of these seven hardware priority classes of service. This command is used to specify the rotation by which these seven hardware priority classes of service are emptied. The Switch’s default is to empty the seven priority classes of service in order – from the highest priority class of service (queue 6) to the lowest priority class of service (queue 0). Each queue will transmit all of the packets in its buffer before allowing the next lower priority class of service to transmit its packets. Lower classes of service will be preempted from emptying its queue if a packet is received on a higher class of service. The packet that was received on the higher class of service will transmit its packet before allowing the lower class to resume clearing its queue.</td>
</tr>
<tr>
<td>Parameters</td>
<td>strict – Entering the strict parameter indicates that the highest class of service is the first to be processed. That is, the highest class of service should finish emptying before the others begin. weight_fair – Entering the weight fair parameter indicates that the priority classes of service will empty packets in a fair weighted order. That is to say that they will be emptied in an even distribution.</td>
</tr>
</tbody>
</table>
| Restrictions        | Only Administrator-level users can issue this command. }

101
Example usage:

To configure the traffic scheduling mechanism for each QoS queue:

```
DES-3028P:4#config scheduling_mechanism strict
Command: config scheduling_mechanism strict

Note: The strict mode is only supported at the highest queue and the other lower queues will still work at WRR mode.

Success.
DES-3028P:4#
```

**show scheduling_mechanism**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current traffic scheduling mechanisms in use on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show scheduling_mechanism</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the current traffic scheduling mechanisms in use on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To show the scheduling mechanism:

```
DES-3028P:4#show scheduling_mechanism
Command: show scheduling_mechanism

QOS scheduling_mechanism
CLASS ID    Mechanism
---------    -----------
Class-0        strict
Class-1        strict
Class-2        strict
Class-3        strict

DES-3028P:4#
```
config 802.1p user_priority

Purpose
Used to map the 802.1p user priority of an incoming packet to one of the four hardware queues available on the Switch.

Syntax
config 802.1p user_priority <priority 0-7> <class_id 0-3>

Description
This command allows users to configure the way the Switch will map an incoming packet, based on its 802.1p user priority, to one of the four available hardware priority queues on the Switch.

The Switch’s default is to map the following incoming 802.1p user priority values to the four hardware priority queues:

<table>
<thead>
<tr>
<th>802.1p</th>
<th>Hardware Queue</th>
<th>Remark</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1</td>
<td>Mid-low</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
<td>Lowest</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
<td>Lowest</td>
</tr>
<tr>
<td>3</td>
<td>1</td>
<td>Mid-low</td>
</tr>
<tr>
<td>4</td>
<td>2</td>
<td>Mid-high</td>
</tr>
<tr>
<td>5</td>
<td>2</td>
<td>Mid-high</td>
</tr>
<tr>
<td>6</td>
<td>3</td>
<td>Highest</td>
</tr>
<tr>
<td>7</td>
<td>3</td>
<td>Highest</td>
</tr>
</tbody>
</table>

This mapping scheme is based upon recommendations contained in IEEE 802.1D.

Change this mapping by specifying the 802.1p user priority users want to map to the <class_id 0-3> (the number of the hardware queue).

<priority 0-7> – The 802.1p user priority to associate with the <class_id 0-3> (the number of the hardware queue).
<class_id 0-3> – The number of the Switch’s hardware priority queue. The Switch has four hardware priority queues available. They are numbered between 0 (the lowest priority) and 3 (the highest priority).

Restrictions
Only Administrator-level users can issue this command.

Example usage:

To configure 802.1p user priority on the Switch:

```
DES-3028P:4# config 802.1p user_priority 1 3
Command: config 802.1p user_priority 1 3
Success.
DES-3028P:4#
```

show 802.1p user_priority

Purpose
Used to display the current mapping between an incoming packet’s 802.1p priority value and one of the Switch’s four hardware priority queues.

Syntax
show 802.1p user_priority

Description
The show 802.1p user_priority command displays the current mapping of an incoming packet’s 802.1p priority value to one of the Switch’s four hardware priority queues.

Parameters
None.

Restrictions
None.
Example usage:

To show 802.1p user priority:

```
DES-3028P:4# show 802.1p user_priority
Command: show 802.1p user_priority

QOS Class of Traffic
Priority-0 -> <Class-1>
Priority-1 -> <Class-0>
Priority-2 -> <Class-0>
Priority-3 -> <Class-1>
Priority-4 -> <Class-2>
Priority-5 -> <Class-2>
Priority-6 -> <Class-3>
Priority-7 -> <Class-3>
```

```
cfg 802.1p default_priority
Purpose: Used to configure the 802.1p default priority settings on the Switch. If an untagged packet is received by the Switch, the priority configured with this command will be written to the packet's priority field.
Syntax: config 802.1p default_priority [<portlist>] all <priority 0-7>
Description: This command allows the user to specify default priority handling of untagged packets received by the Switch. The priority value entered with this command will be used to determine to which of the four hardware priority queues the packet is forwarded.
Parameters:
- `<portlist>` – Specifies a port or range of ports to be configured.
- `all` – Specifies that the command applies to all ports on the Switch.
- `<priority 0-7>` – The priority value to assign to untagged packets received by the Switch or a range of ports on the Switch.
Restrictions: Only Administrator-level users can issue this command.
```

Example usage:

To configure 802.1p default priority on the Switch:

```
DES-3028P:4# config 802.1p default_priority all 5
Command: config 802.1p default_priority all 5
Success.
DES-3028P:4#
```

```
show 802.1p default_priority
Purpose: Used to display the currently configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination.
Syntax: show 802.1p default_priority {<portlist>}
Description: The `show 802.1p default_priority` command displays the currently
```
show 802.1p default_priority

configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination.

Parameters

<portlist> – Specifies a port or range of ports to be configured.

Restrictions

None.

Example usage:

To display the current 802.1p default priority configuration on the Switch:

<table>
<thead>
<tr>
<th>Port</th>
<th>Priority</th>
<th>Effective Priority</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>0</td>
<td>0</td>
</tr>
<tr>

<tr>
<td>20</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>
config cos mapping

Purpose
Used to configure the CoS to port mapping method to be used on the switch.

Syntax
```
config cos mapping port [<portlist> | all] [none | {port_mapping | ethernet [802.1p | mac_mapping] | ip [tos | dscp]}]
```

Description
The `config cos mapping` is used to set the method of which incoming packets will be identified for the CoS to port mapping feature on the Switch. Identified packets will be forwarded to the appropriate CoS queue.

Parameters
- `<portlist>` – Specifies a port or range of ports to be configured.
- `all` – Specifies all ports will be configured.
- `none` – Disable all priority-base CoS features.
- `port_mapping` – Enable port-based CoS.
- `ethernet` – Enable Ethernet frame based priority.
- `802.1p` – Enable 802.1p CoS
- `mac_mapping` – Enable MAC-based CoS.
- `ip` – Enable Ethernet frame based priority.

Restrictions
None.

Example usage:
To configure port 1 as a CoS enabled port which uses the physical port number as its criteria for identifying packets:

```
DES-3028P:4# config cos mapping port 1
port_mapping
Command: config cos mapping port 1
port_mapping
Success.
DES-3028P:4#
```

show cos mapping

Purpose
Used to show CoS mapping.

Syntax
```
show cos mapping {port <portlist> }
```

Description
The `show cos mapping` displays information regarding CoS mapping enabled ports and their mapping method.

Parameters
- `<portlist>` – Specifies a range of ports to be displayed. If no parameter is specified, the all ports priority settings will be shown.

Restrictions
None.

Example usage:
To show the CoS mapping information:

```
DES-3028P:4# show cos mapping
Command: show cos mapping

<table>
<thead>
<tr>
<th>Port</th>
<th>Port_priority</th>
<th>Ethernet_priority</th>
<th>IP_priority</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>off</td>
<td>802.1p</td>
<td>off</td>
</tr>
<tr>
<td>2</td>
<td>off</td>
<td>802.1p</td>
<td>off</td>
</tr>
</tbody>
</table>
```

config cos port_mapping

Purpose: Used to map a specific port to one of the hardware queues available on the switch.

Syntax: `config cos port_mapping [0-3] port [<portlist> | all]`

Description: The `config cos port_mapping` command is used to configure port-to-class CoS mapping.

Parameters:
- **0-3** – The number of the switch’s hardware priority queue. The switch has eight hardware priority queues available. They are numbered between 0 (the lowest priority queue) and 3 (the highest priority queue).
- **<portlist>** – Specifies a port or range of ports to be configured.
- **all** – To set all ports in the system at once, you may use the “all” parameter.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To configure a specific CoS queue to be mapped to a destination port 1:

```
DES-3028P:4# config cos port_mapping 3 port 1
Command: config cos port_mapping 3 port 1
Success.
DES-3028P:4#
```
show cos port_mapping

Purpose: Used to map the destination MAC address in incoming packets to one of the hardware queues available on the switch.

Syntax: `show cos port_mapping {port <portlist>}`

Description: The `show cos mac_mapping` command is used to view map static destination MAC addresses to one of the CoS traffic classes.

Parameters:
- `<portlist>` – Specifies a port or range of ports to be configured.
  If no parameter is specified, all port-to-class mappings will be shown.

Restrictions: None.

Example usage:

To show the cos port_mapping of the port 3:

```
DES-3028P:4# show cos port_mapping port 3
Command: show cos port_mapping port 3

Port  Priority
------------------
3       3

DES-3028P:4#
```

cfg cos mac_mapping

Purpose: Used to map the destination MAC address in incoming packet to one of the hardware queues available on the switch.

Syntax: `config cos mac_mapping destination_addr <macaddr> [class <class_id 0-3>]`

Description: The `config cos mac_mapping` command is used to map static destination MAC address to one of the traffic classes.

Parameters:
- `destination_addr` – The MAC address to be configured.
- `<class_id 0-3>` – The number of the Switch’s hardware priority queue. The Switch has four hardware priority queues available. They are numbered between 0 (the lowest priority) and 3 (the highest priority).

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To configure the destination MAC address 00-01-02-03-04-05 to traffic class 2 mapping:

```
DES-3028P:4# config cos mac_mapping destination_addr 00-01-02-03-04-05 class 2
Command: config cos mac_mapping destination_addr 00-01-02-03-04-05 class 2

Success.

DES-3028P:4#
```
show cos mac_mapping

Purpose: Used to show the mapping between destination MAC addresses and CoS traffic classes.

Syntax: `show cos mac_mapping {destination_addr <macaddr>}`

Description: The `show cos mac_mapping` command display the information of the destination MAC address mapped to a traffic class.

Parameters:
- `destination_addr` - The MAC address of the incoming packet destination address. If no parameter is specified, all the MAC address mapping to traffic class will be shown.

Restrictions: None.

Example usage:

To show the MAC address to traffic class mapping of MAC address 00-01-02-03-04-05:

```
DES-3028P:4# show cos mac_mapping destination_addr 00-01-02-03-04-05
Command: show cos mac_mapping destination_addr 00-01-02-03-04-05
```

```
MAC Address             Class
---------------------------------------
00-01-02-03-04-05        2

DES-3028P:4#
```

config cos tos value

Purpose: Used to map the ToS value in the IP header of incoming packets to one of the eight hardware queues available on the switch.

Syntax: `config cos tos value <value 0-7> [class <class_id 0-3>]`

Description: The `config cos tos` command is used to configure ToS to traffic class mapping.

Parameters:
- `<value 0-7>` - The ToS value of incoming packet that you want to associate with the traffic class.
- `<class_id 0-3>` - The number of the Switch’s hardware priority queue. The Switch has four hardware priority queues available. They are numbered between 0 (the lowest priority) and 3 (the highest priority).

Restrictions: Only Administrator-level users can issue this command.

Example usage:

Configure the TOS 5 to the traffic class 1 mapping:

```
DES-3028P:4# config cos tos value 5 class 1
Command: config cos tos value 5 class 1
Success.
DES-3028P:4#
```
### show cos tos

**Purpose**
Used to show TOS value to traffic class mapping.

**Syntax**
```
show cos tos {value <value 0-7>}
```

**Description**
The `show cos tos` command displays the information of ToS to traffic class mappings.

**Parameters**
- `<value 0-7>` – The TOS value of the incoming packet. If no parameter is specified, all the ToS values to traffic class mappings will be shown.

**Restrictions**
None.

**Example usage:**
To show the TOS to traffic class mapping of the TOS 5:

```
DES-3028P:4# show cos tos value 5
Command: show cos tos value 5
TOS value             Class
-------------------------------------------
5                             2
DES-3028P:4#
```

### config dscp_mapping

**Purpose**
Used to map the DSCP value in the IP header of incoming packet to one of the four hardware queues available on the switch.

**Syntax**
```
config dscp_mapping dscp_value <value 0-63> [class <class_id 0-3>]
```

**Description**
The `config dscp_mapping` command is used to configure DSCP mapping to traffic class. This command is supported when the ACL commands are not supported.

**Parameters**
- `<value 0-63>` – The DSCP value of the incoming packet you want to associate with the class_id.
- `<class_id 0-3>` – The number of the Switch’s hardware priority queue. The switch has four hardware priority queues available. They are numbered between 0 (the lowest priority) and 3 (the highest priority).

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To configure DSCP map to traffic class:

```
DES-3028P:4# config dscp_mapping dscp_value 8 class 1
Command: config dscp_mapping dscp_value 8 class 1
Success.
DES-3028P:4#
```
show dscp_mapping

Purpose: Used to show DSCP value map to traffic class.

Syntax: `show dscp_mapping {dscp_value <value 0-63>}`

Description: The `show dscp_mapping` command displays the information for DSCP mapping to traffic class. This command is supported when the ACL commands are not supported.

Parameters:
- `<value 0-63>` – The DSCP value of the incoming packet. If no parameter is specified, all the DSCP value mapping to traffic class will be shown.

Restrictions: None.

Example usage:

To show the DSCP map to traffic class:

```
DES-3028P:4# show dscp_mapping
Command: show dscp_mapping

PORT MIRRORING COMMANDS

The port mirroring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config mirror port</td>
<td>&lt;port&gt; [add</td>
</tr>
<tr>
<td>enable mirror</td>
<td></td>
</tr>
<tr>
<td>disable mirror</td>
<td></td>
</tr>
<tr>
<td>show mirror</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config mirror port**

**Purpose**

Used to configure a mirror port – source port pair on the Switch. Traffic from any source port to a target port can be mirrored for real-time analysis. A logic analyzer or an RMON probe can then be attached to study the traffic crossing the source port in a completely non-intrusive manner.

**Syntax**

```
cfg config mirror port <port> [add | delete] source ports <portlist> [rx | tx | both]
```

**Description**

This command allows a range of ports to have all of their traffic also sent to a designated port, where a network sniffer or other device can monitor the network traffic. In addition, users can specify that only traffic received by or sent by one or both is mirrored to the Target port.

**Parameters**

- `<port>` – This specifies the Target port (the port where mirrored packets will be received). The target port must be configured in the same VLAN and must be operating at the same speed as the source port.
- `[add | delete]` – Specifies if the user wishes to add or delete ports to be mirrored that are specified in the `source ports` parameter.
- `source ports` – The port or ports being mirrored. This cannot include the Target port.
- `<portlist>` – This specifies a port or range of ports that will be mirrored. That is, the range of ports in which all traffic will be copied and sent to the Target port.
- `rx` – Allows the mirroring of only packets received by (flowing into) the port or ports in the port list.
- `tx` – Allows the mirroring of only packets sent to (flowing out of) the port or ports in the port list.
- `both` – Mirrors all the packets received or sent by the port or ports in the port list.

**Restrictions**

The Target port cannot be listed as a source port. Only Administrator-level users can issue this command.

Example usage:

To add the mirroring ports:

```
DES-3028P:4# config mirror port 1 add source ports 2-7 both
```
Example usage:

To delete the mirroring ports:

```
DES-3028P:4# config mirror port 1 delete source port 2-4 both
Command: config mirror 1 delete source 2-4 both
Success.
DES-3028P:4#
```

### enable mirror

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable a previously entered port mirroring configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable mirror</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command, combined with the <code>disable mirror</code> command below, allows the user to enter a port mirroring configuration into the Switch, and then turn the port mirroring on and off without having to modify the port mirroring configuration.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable mirroring configurations:

```
DES-3028P:4# enable mirror
Command: enable mirror
Success.
DES-3028P:4#
```

### disable mirror

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable a previously entered port mirroring configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable mirror</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command, combined with the <code>enable mirror</code> command above, allows the user to enter a port mirroring configuration into the Switch, and then turn the port mirroring on and off without having to modify the port mirroring configuration.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable mirroring configurations:

```
DES-3028P:4# disable mirror
```
Command: disable mirror
Success.

DES-3028P:4#

<table>
<thead>
<tr>
<th><strong>show mirror</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td><strong>Syntax</strong></td>
</tr>
<tr>
<td><strong>Description</strong></td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
</tr>
</tbody>
</table>

Example usage:

To display mirroring configuration:

```
DES-3028P:4#show mirror
Command: show mirror

Current Settings
Mirror Status : Enabled
Target Port   : 1
Mirrored Port :
   RX :
   TX : 5-7

DES-3028P:4#
```
VLAN COMMANDS

The VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create vlan</td>
<td>`&lt;vlan_name 32&gt; {tag &lt;vlanid 2-4094&gt;</td>
</tr>
<tr>
<td>delete vlan</td>
<td><code>&lt;vlan_name 32&gt;</code></td>
</tr>
<tr>
<td>create vlan vlanid</td>
<td><code>&lt;vidlist&gt; {advertisement}</code></td>
</tr>
<tr>
<td>delete vlan vlanid</td>
<td><code>&lt;vidlist&gt;</code></td>
</tr>
<tr>
<td>config vlan vlanid</td>
<td>`&lt;vidlist&gt; { [ add [ tagged</td>
</tr>
<tr>
<td>config vlan</td>
<td>`&lt;vlan_name 32&gt; { [add [tagged</td>
</tr>
<tr>
<td>config gvrp</td>
<td>`{&lt;portlist&gt;</td>
</tr>
<tr>
<td>enable gvrp</td>
<td></td>
</tr>
<tr>
<td>disable gvrp</td>
<td></td>
</tr>
<tr>
<td>show vlan</td>
<td>`{[&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>show gvrp</td>
<td><code>&lt;portlist&gt;</code></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### create vlan

**Purpose:** Used to create a VLAN on the Switch.

**Syntax:**

```
create vlan <vlan_name 32> {tag <vlanid 2-4094> | advertisement}
```

**Description:** This command allows the user to create a VLAN on the Switch.

**Parameters:**

- `<vlan_name 32>` – The name of the VLAN to be created.
- `<vlanid 2-4094>` – The VLAN ID of the VLAN to be created. Allowed values = 2-4094
- `advertisement` – Specifies that the VLAN is able to join GVRP. If this parameter is not set, the VLAN cannot be configured to have forbidden ports.

**Restrictions:** Each VLAN name can be up to 32 characters. Up to 4094 static VLANs may be created per configuration. Only Administrator-level users can issue this command.

**Example usage:**

To create a VLAN v1, tag 2:

```
DES-3028P:4# create vlan v1 tag 2
Command: create vlan v1 tag 2
Success.
```
### delete vlan

**Purpose**
Used to delete a previously configured VLAN on the Switch.

**Syntax**
```bash
delete vlan <vlan_name 32>
```

**Description**
This command will delete a previously configured VLAN on the Switch.

**Parameters**
- `<vlan_name 32>` – The VLAN name of the VLAN to delete.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To remove the VLAN “v1”:

```
DES-3028P:4#delete vlan v1
Command: delete vlan v1
Success.
```

### config vlan

**Purpose**
Used to add additional ports to a previously configured VLAN.

**Syntax**
```bash
config vlan <vlan_name 32> {[add [tagged | untagged | forbidden] | delete] <portlist> | advertisement [enable | disable]}
```

**Description**
This command allows the user to add ports to the port list of a previously configured VLAN. The user can specify the additional ports as tagging, untagging, or forbidden. The default is to assign the ports as untagging.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN to which to add ports.
- `add` – Entering the add parameter will add ports to the VLAN. There are three types of ports to add:
  - `tagged` – Specifies the additional ports as tagged.
  - `untagged` – Specifies the additional ports as untagged.
  - `forbidden` – Specifies the additional ports as forbidden
- `delete` – Deletes ports from the specified VLAN.
- `<portlist>` – A port or range of ports to add to, or delete from the specified VLAN.
- `advertisement [enable | disable]` – Enables or disables GVRP on the specified VLAN.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To add 4 through 8 as tagged ports to the VLAN v1:

```
DES-3028P:4#config vlan v1 add tagged 4-8
Command: config vlan v1 add tagged 4-8
Success.
```

DES-3028P:4#
To delete ports from a VLAN:

```
DES-3028P:4#config vlan v1 delete 6-8
Command: config vlan v1 delete 6-8
Success.
DES-3028P:4#
```

### create vlan vlanid

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to create multiple VLANs by VLAN ID list on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>create vlan vlanid &lt;vidlist&gt; { advertisement }</code></td>
</tr>
<tr>
<td>Description</td>
<td>The create vlans by vlanid list command creates multiple VLANs on the switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vidlist&gt;</code> – Specifies a range of multiple VLAN IDs to be created.</td>
</tr>
<tr>
<td></td>
<td><code>advertisement</code> – Join GVRP or not. If not, the VLAN can’t join dynamically.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To create VLAN ID on the switch:

```
DES-3028P:4#create vlan vlanid 5 advertisement
Command: create vlan vlanid 5 advertisement
Success
DES-3028P:4#
```

### delete vlan vlanid

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete multiple VLANs by VLAN ID on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>delete vlan vlanid &lt;vidlist&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>The delete vlan by vlan id list command deletes previously configured multiple VLANs on the switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vidlist&gt;</code> – Specifies a range of multiple VLAN IDs to be deleted.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete VLAN ID on the switch:

```
DES-3028P:4#delete vlan vlanid 5
Command: delete vlan vlanid 5
Success
DES-3028P:4#
```

### config vlan vlanid

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to add additional ports to a previously configured VLAN.</th>
</tr>
</thead>
</table>

---

117
### config vlan vlanid

| Syntax | config vlan vlanid <vidlist> {add [tagged | untagged | forbidden] | delete <portlist> | advertisement [enable | disable] | name <name>} |
|---|---|
| Description | The config vlan vlanid command allows you to add or delete ports of the port list of previously configured VLAN(s). You can specify the additional ports as being tagged, untagged or forbidden. The same port is allowed to be an untagged member port of multiple VLAN's. You can also specify if the ports will join GVRP or not with the advertisement parameter. The name parameter allows you to specify the name of the VLAN that needs to be modified. |
| Parameters | <vidlist> – Specifies a range of multiple VLAN IDs to be configured. 
tagged – Specifies the additional ports as tagged. 
untagged – Specifies the additional ports as untagged. 
forbidden – Specifies the additional ports as forbidden. 
<portlist> – A range of ports to add to the VLAN. 
advertisement – Entering the advertisement parameter specifies if the port should join GVRP or not. There are two parameters: 
• enable – Specifies that the port should join GVRP. 
• Disable – Specifies that the port should not join GVRP. 
 name – Entering the name parameter specifies the name of the VLAN to be modified. 
 <name> – Enter a name for the VLAN |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To config vlan vlanid on the switch:

```
DES-3028P:4#config vlan vlanid 5 add tagged 7 advertisement enable name RG
Command: config vlan vlanid 5 add tagged 7 advertisement enable name RG
Success.
DES-3028P:4#
```

### config gvrp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure GVRP on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config gvrp &lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the Group VLAN Registration Protocol on the Switch. Ingress checking, the sending and receiving of GVRP information, and the Port VLAN ID (PVID) can be configured.</td>
</tr>
</tbody>
</table>
| Parameters | <portlist> – A port or range of ports for which users want to enable GVRP for. 
 all – Specifies all of the ports on the Switch. 
 state [enable | disable] – Enables or disables GVRP for the ports specified in the port list. |
**config gvrp**

`ingress_checking [enable | disable]` – Enables or disables ingress checking for the specified port list.

`acceptable_frame [tagged_only | admit_all]` – This parameter states the frame type that will be accepted by the Switch for this function. `tagged_only` implies that only VLAN tagged frames will be accepted, while `admit_all` implies tagged and untagged frames will be accepted by the Switch.

`pvid <vlanid 1-4094>` – Specifies the default VLAN associated with the port.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To set the ingress checking status, the sending and receiving GVRP information:

```
DES-3028P:4#config gvrp 1-4 state enable ingress_checking enable acceptable_frame tagged_only pvid 2
Command: config gvrp 1-4 state enable ingress_checking enable acceptable_frame tagged_only pvid 2
Success.
```

**enable gvrp**

Purpose: Used to enable GVRP on the Switch.

Syntax: `enable gvrp`

Description: This command, along with `disable gvrp` below, is used to enable and disable GVRP on the Switch, without changing the GVRP configuration on the Switch.

Parameters: None.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To enable the generic VLAN Registration Protocol (GVRP):

```
DES-3028P:4#enable gvrp
Command: enable gvrp
Success.
```

**disable gvrp**

Purpose: Used to disable GVRP on the Switch.

Syntax: `disable gvrp`

Description: This command, along with `enable gvrp`, is used to enable and disable GVRP on the Switch, without changing the GVRP configuration on the Switch.

Parameters: None.
### disable gvrp

| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To disable the Generic VLAN Registration Protocol (GVRP):

```
DES-3028P:4#disable gvrp
Command: disable gvrp
Success.
DES-3028P:4#
```

### show vlan

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current VLAN configuration on the Switch</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays summary information about each VLAN including the VLAN ID, VLAN name, VLAN Type, the Tagging/Untagging status, and the Member/Non-member/Forbidden status of each port that is a member of the VLAN.</td>
</tr>
</tbody>
</table>
| Parameters | `<vlanid>` – Specifies a range of multiple VLAN IDs to be displayed.  
`<ports>` – Specifies the ports to be displayed.  
`<vlan_name 32>` – The VLAN name of the VLAN for which to display a summary of settings.  
`<portlist>` – Specifies a port or range of ports that will be displayed. |
| Restrictions | None. |

Example usage:

To display the Switch’s current VLAN settings:

```
DES-3028P:4#show vlan
Command: show vlan
VID : 1   VLAN Name : default
VLAN Type : Static   Advertisement : Enabled
Member Ports : 1-28  
Static Ports : 1-28
Current Tagged Ports :  
Current Untagged Ports : 1-28  
Static Tagged Ports :  
Static Untagged Ports : 1-28
Forbidden Ports :  

Total Entries : 1

DES-3028P:4#
```

To display the Switch’s current VLAN settings for a specific port:
### show vlan

**Command:**
```
DES-3028P:4# show vlan ports 1
```

**Table:**
<table>
<thead>
<tr>
<th>VLAN ID</th>
<th>Untagged</th>
<th>Tagged</th>
<th>Forbidden</th>
<th>Dynamic</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>X</td>
<td>-</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

### show gvrp

**Purpose:** Used to display the GVRP status for a port list on the Switch.

**Syntax:**
```
show gvrp {<portlist>}
```

**Description:** This command displays the GVRP status for a port list on the Switch.

**Parameters:**
- `<portlist>` – Specifies a port or range of ports for which the GVRP status is to be displayed.

**Restrictions:** None.

**Example usage:**
To display GVRP port status:
```
DES-3028P:4# show gvrp 1-10
```

**Table:**
<table>
<thead>
<tr>
<th>Port</th>
<th>PVID</th>

**Total Entries:** 10
The link aggregation commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create link_aggregation</td>
<td>group_id &lt;value 1-6&gt; {type [lacp</td>
</tr>
<tr>
<td>delete link_aggregation</td>
<td>group_id &lt;value 1-6&gt;</td>
</tr>
<tr>
<td>config link_aggregation</td>
<td>group_id &lt;value 1-6&gt; {master_port &lt;port&gt;</td>
</tr>
<tr>
<td>config link_aggregation</td>
<td>algorithm [mac_source</td>
</tr>
<tr>
<td>show link_aggregation</td>
<td>{group_id &lt;value 1-6&gt;</td>
</tr>
<tr>
<td>config lacp_port</td>
<td>&lt;portlist&gt; mode [active</td>
</tr>
<tr>
<td>show lacp_port</td>
<td>{&lt;portlist}&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create link_aggregation**

**Purpose**

Used to create a link aggregation group on the Switch.

**Syntax**

`create link_aggregation group_id <value 1-6> {type [lacp | static]}`

**Description**

This command will create a link aggregation group with a unique identifier.

**Parameters**

- `<value>` – Specifies the group ID. The Switch allows up to 6 link aggregation groups to be configured. The group number identifies each of the groups.
- `type` – Specify the type of link aggregation used for the group. If the type is not specified the default type is `static`.
  - `lacp` – This designates the port group as LACP compliant. LACP allows dynamic adjustment to the aggregated port group. LACP compliant ports may be further configured (see `config lacp_port`). LACP compliant must be connected to LACP compliant devices.
  - `static` – This designates the aggregated port group as static. Static port groups can not be changed as easily as LACP compliant port groups since both linked devices must be manually configured if the configuration of the trunk group is changed. If static link aggregation is used, be sure that both ends of the connection are properly configured and that all ports have the same speed/duplex settings.

**Restrictions**

Only Administrator-level users can issue this command.

**Example usage:**

To create a link aggregation group:

```
DES-3028P:4# create link_aggregation group_id 1
Command: create link_aggregation group_id 1
Success.
DES-3028P:4#
```
**delete link_aggregation group_id**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete a previously configured link aggregation group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>delete link_aggregation group_id &lt;value 1-6&gt;</strong></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to delete a previously configured link aggregation group.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;value 1-6&gt; – Specifies the group ID. The Switch allows up to 6 link aggregation groups to be configured. The group number identifies each of the groups.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete link aggregation group:

```
DES-3028P:4#delete link_aggregation group_id 6
Command: delete link_aggregation group_id 6
Success.
DES-3028P:4#
```

**config link_aggregation**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure a previously created link aggregation group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>**config link_aggregation group_id &lt;value 1-6&gt; {master_port &lt;port&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows users to configure a link aggregation group that was created with the create link_aggregation command above.</td>
</tr>
<tr>
<td>Parameters</td>
<td>group_id &lt;value 1-6&gt; – Specifies the group ID. The Switch allows up to 6 link aggregation groups to be configured. The group number identifies each of the groups.</td>
</tr>
<tr>
<td></td>
<td>master_port &lt;port&gt; – Master port ID. Specifies which port (by port number) of the link aggregation group will be the master port. All of the ports in a link aggregation group will share the port configuration with the master port.</td>
</tr>
<tr>
<td></td>
<td>ports &lt;portlist&gt; – Specifies a port or range of ports that will belong to the link aggregation group.</td>
</tr>
<tr>
<td></td>
<td>state [enable</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command. Link aggregation groups may not overlap.</td>
</tr>
</tbody>
</table>

Example usage:

To define a load-sharing group of ports, group-id 1,master port 1 with group members ports 1 through 4:

```
DES-3028P:4#config link_aggregation group_id 1 master_port 1 ports 1-4
Command: config link_aggregation group_id 1 master_port 1 ports 1-4
Success.
DES-3028P:4#
```
**config link_aggregation algorithm**

**Purpose**
Used to configure the link aggregation algorithm.

**Syntax**
```
config link_aggregation algorithm [mac_source | mac_destination | mac_source_dest]
```

**Description**
This command configures the part of the packet examined by the Switch when selecting the egress port for transmitting load-sharing data. This feature is only available using the address-based load-sharing algorithm.

**Parameters**
- `mac_source` – Indicates that the Switch should examine the MAC source address.
- `mac_destination` – Indicates that the Switch should examine the MAC destination address.
- `mac_source_dest` – Indicates that the Switch should examine the MAC source and destination addresses.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To configure link aggregation algorithm for mac-source-dest:

```
DES-3028P:4#config link_aggregation algorithm mac_source_dest
Command: config link_aggregation algorithm mac_source_dest
Success.
DES-3028P:4#
```

**show link_aggregation**

**Purpose**
Used to display the current link aggregation configuration on the Switch.

**Syntax**
```
show link_aggregation {group_id <value 1-6> | algorithm}
```

**Description**
This command will display the current link aggregation configuration of the Switch.

**Parameters**
- `<value 1-6>` – Specifies the group ID. The Switch allows up to 6 link aggregation groups to be configured. The group number identifies each of the groups.
- `algorithm` – Allows users to specify the display of link aggregation by the algorithm in use by that group.

**Restrictions**
None.

Example usage:
To display Link Aggregation configuration:

```
DES-3028P:4#show link_aggregation
```
DES-3028P:4#show link_aggregation
Command: show link_aggregation

Link Aggregation Algorithm = MAC-source-dest

Group ID : 1
Master Port : 1
Member Port : 1, 5-10

**config lacp_ports**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure settings for LACP compliant ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config lacp_ports &lt;portlist&gt; mode [active</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure ports that have been previously designated as LACP ports (see create link_aggregation).</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;portlist&gt; – Specifies a port or range of ports to be configured.</td>
</tr>
<tr>
<td></td>
<td>mode – Select the mode to determine if LACP ports will process LACP control frames.</td>
</tr>
<tr>
<td></td>
<td>• active – Active LACP ports are capable of processing and sending LACP control frames. This allows LACP compliant devices to negotiate the aggregated link so the group may be changed dynamically as needs require. In order to utilize the ability to change an aggregated port group, that is, to add or subtract ports from the group, at least one of the participating devices must designate LACP ports as active. Both devices must support LACP.</td>
</tr>
<tr>
<td></td>
<td>• passive – LACP ports that are designated as passive cannot process LACP control frames. In order to allow the linked port group to negotiate adjustments and make changes dynamically, at one end of the connection must have “active” LACP ports (see above).</td>
</tr>
</tbody>
</table>

Restrictions Only Administrator-level users can issue this command.

Example usage:

To configure LACP port mode settings:

DES-3028P:4#config lacp_port 1-12 mode active
Command: config lacp_port 1-12 mode active

Success.

DES-3028P:4#
### show lacp_port

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display current LACP port mode settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show lacp_port {&lt;portlist&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the LACP mode settings as they are currently configured.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specifies a port or range of ports to be configured.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To display LACP port mode settings:

```
DES-3028P:4#show lacp_port 1-10
Command: show lacp_port 1-10

<table>
<thead>
<tr>
<th>Port</th>
<th>Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Active</td>
</tr>
<tr>
<td>2</td>
<td>Active</td>
</tr>
<tr>
<td>3</td>
<td>Active</td>
</tr>
<tr>
<td>4</td>
<td>Active</td>
</tr>
<tr>
<td>5</td>
<td>Active</td>
</tr>
<tr>
<td>6</td>
<td>Active</td>
</tr>
<tr>
<td>7</td>
<td>Active</td>
</tr>
<tr>
<td>8</td>
<td>Active</td>
</tr>
<tr>
<td>9</td>
<td>Active</td>
</tr>
<tr>
<td>10</td>
<td>Active</td>
</tr>
</tbody>
</table>
```

DES-3028P:4#
The IP interface commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config ipif</td>
<td>[System] [ipaddress &lt;network_address&gt;</td>
</tr>
<tr>
<td>show ipif</td>
<td></td>
</tr>
<tr>
<td>enable autoconfig*</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

*See Switch Utility Commands for descriptions of all autoconfig commands.

**config ipif**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the System IP interface.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config ipif [System] [ipaddress &lt;network_address&gt; [vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the System IP interface on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>System – Enter System.</td>
</tr>
<tr>
<td></td>
<td>ipaddress &lt;network_address&gt; – IP address and netmask of the IP interface to be created. Users can specify the address and mask information using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format 10.1.2.3/8).</td>
</tr>
<tr>
<td></td>
<td>&lt;vlan_name 32&gt; – The name of the VLAN corresponding to the System IP interface.</td>
</tr>
<tr>
<td></td>
<td>state [enable</td>
</tr>
<tr>
<td></td>
<td>bootp – Allows the selection of the BOOTP protocol for the assignment of an IP address to the Switch’s System IP interface.</td>
</tr>
<tr>
<td></td>
<td>dhcp – Allows the selection of the DHCP protocol for the assignment of an IP address to the Switch’s System IP interface. If users are using the autoconfig feature, the Switch becomes a DHCP client automatically so it is not necessary to change the ipif settings.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the IP interface System:

```
DES-3028P:4# config ipif System ipaddress 10.48.74.122/8
```

Command: config ipif System ipaddress 10.48.74.122/8

Success.

DES-3028P:4#
### show ipif

**Purpose**
Used to display the configuration of an IP interface on the Switch.

**Syntax**
show ipif

**Description**
This command will display the configuration of an IP interface on the Switch.

**Parameters**
None.

**Restrictions**
None.

Example usage:

To display IP interface settings.

```
DES-3028P:4#show ipif
Command: show ipif

IP Interface Settings

Interface Name : System
IP Address      : 10.48.74.122 (MANUAL)
Subnet Mask     : 255.0.0.0
VLAN Name       : default
Admin. State    : Disabled
Link Status     : Link UP
Member Ports    : 1-28

Total Entries : 1

DES-3028P:4#
```

### enable autoconfig

**Purpose**
Used to activate the auto configuration function for the Switch. This will load a previously saved configuration file for current use.

**Syntax**
enable autoconfig

**Description**
When autoconfig is enabled on the Switch, the DHCP reply will contain a configuration file and path name. It will then request the file from the TFTP server specified in the reply. When autoconfig is enabled, the ipif settings will automatically become DHCP client.

**Parameters**
None.

**Restrictions**
When autoconfig is enabled, the Switch becomes a DHCP client automatically (same as: config ipif System dhcp). The DHCP server must have the TFTP server IP address and configuration file name, and be configured to deliver this information in the data field of the DHCP reply packet. The TFTP server must be running and have the requested configuration file in its base directory when the request is received from the Switch. Consult the DHCP server and TFTP server software instructions for information on loading a boot file or configuration file.

Only Administrator-level users can issue this command.

Example usage:

To enable auto configuration on the Switch:
DES-3028P:4#enable autoconfig
Command: enable autoconfig
Success.
DES-3028P:4#

NOTE: More detailed information for this command and related commands can be found in the section titled Switch Utility Commands.
The IGMP Snooping commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config igmp_snooping</td>
<td>[ vlan_name &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config igmp_snooping querier</td>
<td>[vlan_name &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config router_ports</td>
<td>&lt;vlan_name 32&gt; [add</td>
</tr>
<tr>
<td>config router_port_forbidden</td>
<td>&lt;vlan_name 32&gt; [add</td>
</tr>
<tr>
<td>enable igmp snooping</td>
<td>{forward_mcrouter_only}</td>
</tr>
<tr>
<td>show igmp snooping</td>
<td>{vlan &lt;vlan_name 32&gt; }</td>
</tr>
<tr>
<td>disable igmp snooping</td>
<td>{forward_mcrouter_only}</td>
</tr>
<tr>
<td>show router ports</td>
<td>{vlan &lt;vlan_name 32&gt;} {[static</td>
</tr>
<tr>
<td>show igmp_snooping group</td>
<td>{vlan &lt;vlan_name 32&gt;} {data_driven}</td>
</tr>
<tr>
<td>config igmp_snooping data_driven_learning</td>
<td>[ vlan_name &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config igmp_snooping data_driven_learning max_learned_entry</td>
<td>&lt;value 1-256&gt;</td>
</tr>
<tr>
<td>clear igmp snooping data_driven_group</td>
<td>[ vlan_name &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>config igmp access_authentication</td>
<td>ports [all]&lt;portlist&gt;] state [enable</td>
</tr>
<tr>
<td>show igmp access_authentication</td>
<td>ports [all]&lt;portlist&gt;]</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

<table>
<thead>
<tr>
<th>config igmp_snooping</th>
<th>Used to configure IGMP snooping on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>[ vlan_name &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command allows the user to configure IGMP snooping on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;vlan_name 32&gt; – The name of the VLAN for which IGMP snooping is to be configured. host_timeout &lt;sec 1-16711450&gt; – Specifies the maximum amount of time a host can be a member of a multicast group without the Switch receiving a host membership report. The default is 260 seconds. router_timeout &lt;sec 1-16711450&gt; – Specifies the maximum amount of time a route can be a member of a multicast group without the Switch receiving a host membership report. The default is 260 seconds.</td>
</tr>
</tbody>
</table>
config igmp_snooping

leave_timer <sec 0-16711450> – Specifies the maximum amount of time in seconds between the Switch receiving a leave group message from a host, and the Switch issuing a group membership query. If no response to the membership query is received before the Leave Timer expires, the (multicast) forwarding entry for that host is deleted. The default setting is 2.

Note: The leave timer does not need to be configured as its action has no effect on the IGMP snooping settings.

state [enable | disable] – Allows users to enable or disable IGMP snooping for the specified VLAN.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To configure IGMP snooping:

```
config igmp_snooping default host_timeout 250
state enable
```

Command: config igmp_snooping default host_timeout 250 state enable

Success.

config igmp_snooping querier

Purpose Used to configure the time in seconds between general query transmissions, the maximum time in seconds to wait for reports from members and the permitted packet loss that guarantees IGMP snooping.

Syntax

```
config igmp_snooping querier [vlan <vlan_name 32> | all] { query_interval <sec 1-65535> | max_response_time <sec 1-25>| robustness_variable <value 1-255> | last_member_query_interval <sec 1-25> | state [enable|disable] }
```

Description The `config igmp_snooping querier` command configures IGMP snooping querier.

Parameters

- `<vlan_name 32>` – The name of the VLAN for which IGMP snooping querier is to be configured.
- `query_interval <sec 1-25>` – Specifies the amount of time in seconds between general query transmissions. The default setting is 125 seconds.
- `max_response_time` – The maximum time in seconds to wait for reports from members. The default setting is 10 seconds.
- `robustness_variable` – Provides fine-tuning to allow for expected packet loss on a subnet. The value of the robustness variable is used in calculating the following IGMP message intervals:
  - Group member interval – Amount of time that must pass before a multicast router decides there are no more members of a group on a network. This interval is calculated as follows: (robustness variable x query interval) + (1 x query response interval).
  - Other querier present interval – Amount of time that must pass before a multicast router decides that there is no longer another multicast router that is the querier. This interval is calculated as follows: (robustness variable x query interval) + (0.5 x query response interval).
  - Last member query count – Number of group-specific queries sent before the router assumes there are no local members of a group. The default number is the value of the robustness variable.
config igmp_snooping querier

- By default, the robustness variable is set to 2. You might want to increase this value if you expect a subnet to be lossy.

**last_member_query_interval** – The maximum amount of time between group-specific query messages, including those sent in response to leave-group messages. You might lower this interval to reduce the amount of time it takes a router to detect the loss of the last member of a group.

**state** – If the state is enable, it allows the switch to be selected as a IGMP Querier (sends IGMP query packets). If the state is disabled, then the switch can not play the role as a querier. Note that if the Layer 3 router connected to the switch provide only the IGMP proxy function but not provide the multicast routing function, then this state must be configured as disabled. Otherwise, if the Layer 3 router is not selected as the querier, it will not send the IGMP query packet. Since it will not also send the multicast-routing protocol packet, the port will be timed out as a router port.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To configure IGMP snooping querier:

```
DES-3028P:4# config igmp_snooping querier vlan default query_interval 125 state enable
Command: config igmp_snooping querier vlan default query_interval 125 state enable
Success.
DES-3028P:4#
```

config router_ports

**Purpose**
Used to configure ports as router ports.

**Syntax**
```
config router_ports <vlan_name 32> [add | delete] <portlist>
```

**Description**
This command allows users to designate a range of ports as being connected to multicast-enabled routers. This will ensure that all packets with such a router as its destination will reach the multicast-enabled router – regardless of protocol, etc.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN on which the router port resides.
- `<portlist>` – Specifies a port or range of ports that will be configured as router ports.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To set up static router ports:

```
DES-3028P:4# config router_ports default add 1-10
Command: config router_ports default add 1-10
Success.
DES-3028P:4#
```
### config router_ports_forbidden

**Purpose**
Used to configure ports as forbidden multicast router ports.

**Syntax**
```
config router_ports_forbidden <vlan_name 32> [add | delete] <portlist>
```

**Description**
This command allows designation of a port or range of ports as being forbidden to multicast-enabled routers. This will ensure that multicast packets will not be forwarded to this port – regardless of protocol, etc.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN on which the router port resides.
- `[add | delete]` – Specifies whether to add or delete forbidden ports of the specified VLAN.
- `<portlist>` – Specifies a range of ports that will be configured as forbidden router ports.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To set up forbidden router ports:

```
DES-3028P:4# config router
ports
forbidden
default
add
2-10
Command: config router_ports_forbidden default add 2-10
Success.
DES-3028P:4#
```

### enable igmp_snooping

**Purpose**
Used to enable IGMP snooping on the Switch.

**Syntax**
```
enable igmp_snooping {forward_mrouter_only}
```

**Description**
This command allows users to enable IGMP snooping on the Switch. If `forward_mrouter_only` is specified, the Switch will only forward all multicast traffic to the multicast router, only. Otherwise, the Switch forwards all multicast traffic to any IP router.

**Parameters**
- `forward_mrouter_only` – Specifies that the Switch should only forward all multicast traffic to a multicast-enabled router. Otherwise, the Switch will forward all multicast traffic to any IP router.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To enable IGMP snooping on the Switch:

```
DE-3028P:4#enable igmp_snooping
Command: enable igmp_snooping
Success.
DE-3028P:4#
```
disable igmp_snooping

**Purpose**
Used to enable IGMP snooping on the Switch.

**Syntax**
```
disable igmp_snooping {forward_mcrouter_only}
```

**Description**
This command disables IGMP snooping on the Switch. IGMP snooping can be disabled only if IP multicast routing is not being used. Disabling IGMP snooping allows all IGMP and IP multicast traffic to flood within a given IP interface.

**Parameters**

- `forward_mcrouter_only` – Adding this parameter to this command will disable forwarding all multicast traffic to a multicast-enabled router. The Switch will then forward all multicast traffic to any IP router.

  Entering this command without the parameter will disable igmp snooping on the Switch.

**Restrictions**
Only Administrator-level users can issue this command.

---

Example usage:

To disable IGMP snooping on the Switch:

```
DES-3028P:4#disable igmp_snooping
Command: disable igmp_snooping
Success.
DES-3028P:4#
```

Example usage:

To disable forwarding all multicast traffic to a multicast-enabled router:

```
DES-3028P:4#disable igmp_snooping forward_mcrouter_only
Command: disable igmp_snooping forward_mcrouter_only
Success.
DES-3028P:4#
```

---

show igmp_snooping

**Purpose**
Used to show the current status of IGMP snooping on the Switch.

**Syntax**
```
show igmp_snooping {vlan <vlan_name 32>}
```

**Description**
This command will display the current IGMP snooping configuration on the Switch.

**Parameters**

- `<vlan_name 32>` – The name of the VLAN for which to view the IGMP snooping configuration.

**Restrictions**
None.

---

Example usage:

To show IGMP snooping:
show igmp_snooping

IGMP Snooping Global State : Disabled
Multicast Router Only : Disabled

### `show igmp_snooping_group`

**Purpose**: Used to display the current IGMP snooping configuration on the Switch.

**Syntax**

```
show igmp_snooping group {vlan <vlan_name 32>} {data_driven}
```

**Description**: This command will display the current IGMP setup currently configured on the Switch.

**Parameters**

- `<vlan_name 32>` – The name of the VLAN for which to view IGMP snooping group information.
- `data_driven` – when the data driven learning is enabled, the multicast filtering mode for all ports are ignored.

**Restrictions**: None.

---

Example usage:

To view the current IGMP snooping group:
DES-3028P:4# show igmp_snooping group

Command: show igmp_snooping group

### config igmp snooping data_driven_learning

**Purpose**
Used to configure the data driven learning of an IGMP snooping group.

**Syntax**
```
[ vlan_name <vlan_name 32> | all] { aged_out [enable|disable]}
```

**Description**
This command is used to enable/disable the data driven learning of an IGMP snooping group.

When data-driven learning is enabled for the VLAN, or when the switch receives the IP multicast traffic on this VLAN, an IGMP snooping group will be created. The learning of an entry is not activated by IGMP membership registration, but by the traffic. For an ordinary IGMP snooping entry, the IGMP protocol will acknowledge the aging out of the entry. For a data-driven entry, the entry can be specified so that it won’t be ageout or that it will be ageout by the host_timeout timer.

When the data driven learning is enabled, the multicast filtering mode for all ports are ignored so that the multicast packets will be forwarded to router ports.

Note that if a data-driven group is created and IGMP member ports are learned later, the entry will become an ordinary IGMP snooping entry. The ageing out mechanism will follow the ordinary IGMP snooping entry.

**Parameters**
- `<vlan_name 32>` – specifies the vlan name to be configured.
- `all` – specifies all data driven entries.
- `aged_out` – Used to enable/disable the aging on the entry. By default, the state is in disabled state.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To configure the igmp snooping data driven entry:

```
DES-3028P:4#config igmp_snooping
data_driven_learning vlan_name default aged_out enable
Command: config igmp_snooping data_driven_learning
vlan_name default aged_out enable
Success.
DES-3028P:4#
```

### config igmp_snooping data_driven_learning max_learned_entry

**Purpose**
Used to configure the IGMP snooping data driven learning max learned entry.

**Syntax**
```
<value 1-256>
```

**Description**
Used to configure the IGMP snooping data driven learning max learned entry.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To configure igmp_snooping data_driven_learning max_learned_entry:

```
DES-3028P:4# config igmp_snooping data_driven_learning max_learned_entry 1
Command: config igmp_snooping data_driven_learning max_learned_entry 1
Success.
DES-3028P:4#
```

### clear igmp_snooping data_driven_group

**Purpose**: Used to delete the IGMP snooping group learned by data driven.

**Syntax**: 
```
[ vlan_name <vlan_name 32> [all | <ipaddr>] | all ]
```

**Description**: Used to delete the IGMP snooping group learned by data driven. Note that this command is currently only for layer 2 switches.

**Parameters**
- `all` – Delete all entries learned by data driven.
- `<vlan_name 32>` – Specifies the vlan name.
- `<ipaddr>` – Specifies the IP Address.

**Restrictions**: Only Administrator-level users can issue this command.

**Example usage:**

To delete all the groups learned by data-driven:

```
DES-3028P:4# clear igmp_snooping data_driven_group all
Command: clear igmp_snooping data_driven_group all
Success.
DES-3028P:4#
```

### config igmp access_authentication

**Purpose**: Used to config IGMP Access Control port status.

**Syntax**: 
```
config igmp access_authentication ports [all|<portlist>] state [enable|disable]
```

**Description**: The config igmp access_authentication ports command is used to enable/disable IGMP Access Control function for specified port. When the access_authentication is enabled, and the switch received a IGMP JOIN, the switch will send the access request to the radius server to do the authentication.

**Parameters**
- `<portlist>` – specifies a range of ports to be configured.
- `state` – enable/disable the radius authentication function on the specified ports

**Restrictions**: Only Administrator-level users can issue this command.

**Example usage:**

To enable IGMP Access Control for all ports:

```
DES-3028P:4# config igmp access_authentication ports all state enable
```
show igmp access_authentication

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current IGMP Access Control configuration.</th>

</tbody>
</table>

Each command is listed in detail in the following sections.

### config dhcp_relay

**Purpose**
Used to configure the DHCP/BOOTP relay feature of the switch.

**Syntax**

```plaintext
config dhcp_relay \{hops <value 1-16> | time <sec 0-65535>\}
```

**Description**
This command is used to configure the DHCP/BOOTP relay feature.

**Parameters**
- **hops <value 1-16>** – Specifies the maximum number of relay agent hops that the DHCP packets can cross.
- **time <sec 0-65535>** – If this time is exceeded; the Switch will not relay the DHCP packet.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To config DHCP relay:

```
DES-3028P:4#config dhcp_relay hops 2 time 23
Command: config dhcp_relay hops 2 time 23
Success.
```

### config dhcp_relay add ipif

**Purpose**
Used to add an IP destination address to the switch's DHCP/BOOTP relay table.

**Syntax**

```plaintext
config dhcp_relay add ipif System <ipaddr>
```

**Description**
This command adds an IP address as a destination to forward (relay) DHCP/BOOTP relay packets to.

**Parameters**
- **System** – The name of the IP interface in which DHCP relay is to be enabled.
config dhcp_relay add ipif

| <ipaddr> – The DHCP server IP address. |

Restrictions Only Administrator-level users can issue this command.

Example usage:
To add an IP destination to the DHCP relay table:

```
DES-3028P:4#config dhcp_relay add ipif System 10.58.44.6
Command: config dhcp_relay add ipif System 10.58.44.6
Success.
DES-3028P:4#
```

config dhcp_relay delete ipif

| Purpose | Used to delete one or all IP destination addresses from the Switch's DHCP/BOOTP relay table. |
| Syntax | config dhcp_relay delete ipif System <ipaddr> |
| Description | This command is used to delete an IP destination addresses in the Switch's DHCP/BOOTP relay table. |
| Parameters | System – The name of the IP interface that contains the IP address below. <ipaddr> – The DHCP server IP address. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:
To delete an IP destination from the DHCP relay table:

```
DES-3028P:4#config dhcp_relay delete ipif System 10.58.44.6
Command: config dhcp_relay delete ipif System 10.58.44.6
Success.
DES-3028P:4#
```

config dhcp_relay option_82 state

| Purpose | Used to configure the state of DHCP relay agent information option 82 of the switch. |
| Syntax | config dhcp_relay option_82 state [enable | disable] |
| Description | This command is used to configure the state of DHCP relay agent information option 82 of the switch. |
| Parameters | enable – When this field is toggled to Enabled the relay agent will insert and remove DHCP relay information (option 82 field) in messages between DHCP server and client. When the relay agent receives the DHCP request, it adds the option 82 information, and the IP address of the relay agent (if the relay agent is configured), to the packet. Once the option 82 information has been added to the packet it is sent on to the DHCP server. When the DHCP server receives the packet, if the server is capable of option 82, it can implement policies like... |
Restricting the number of IP addresses that can be assigned to a single remote ID or circuit ID. Then the DHCP server echoes the option 82 field in the DHCP reply. The DHCP server unicasts the reply to the back to the relay agent if the request was relayed to the server by the relay agent. The switch verifies that it originally inserted the option 82 data. Finally, the relay agent removes the option 82 field and forwards the packet to the switch port that connects to the DHCP client that sent the DHCP request.

**disable** – If the field is toggled to *disable* the relay agent will not insert and remove DHCP relay information (option 82 field) in messages between DHCP servers and clients, and the check and policy settings will have no effect.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To configure DHCP relay option 82 state:

```
DES-3028P:4#config dhcp relay option_82 state enable
Command: config dhcp relay option_82 state enable
Success.
DES-3028P:4#
```

**Purpose**

Used to configure the checking mechanism of DHCP relay agent information option 82 of the switch.

**Syntax**

```
config dhcp relay option_82 check [enable | disable]
```

**Description**

This command is used to configure the checking mechanism of DHCP/BOOTP relay agent information option 82 of the switch.

**Parameters**

*enable* – When the field is toggled to *enable*, the relay agent will check the validity of the packet’s option 82 field. If the switch receives a packet that contains the option 82 field from a DHCP client, the switch drops the packet because it is invalid. In packets received from DHCP servers, the relay agent will drop invalid messages.

*disable* – When the field is toggled to *disable*, the relay agent will not check the validity of the packet’s option 82 field.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To configure DHCP relay option 82 check:

```
DES-3028P:4#config dhcp relay option_82 check enable
Command: config dhcp relay option_82 check enable
Success.
DES-3028P:4#
```
config dhcp_relay option_82 policy

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the reforwarding policy of relay agent information option 82 of the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config dhcp_relay option_82 policy [replace</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the reforwarding policy of DHCP relay agent information option 82 of the switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>replace – The option 82 field will be replaced if the option 82 field already exists in the packet received from the DHCP client.</td>
</tr>
<tr>
<td></td>
<td>drop – The packet will be dropped if the option 82 field already exists in the packet received from the DHCP client.</td>
</tr>
<tr>
<td></td>
<td>keep – The option 82 field will be retained if the option 82 field already exists in the packet received from the DHCP client.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure DHCP relay option 82 policy:

```
DES-3028P:4#config dhcp_relay option_82 policy replace
Command: config dhcp_relay option_82 policy replace
Success.
DES-3028P:4#
```
config dhcp_relay option_82 remote id

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the processing of DHCP 82 remote id option for the DHCP.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config dhcp_relay option_82 remote_id [default</td>
</tr>
<tr>
<td>Description</td>
<td>Configures the processing of DHCP 82 option for the DHCP relay function. When DHCP 82 option is enabled, the DHCP packet received from the client will be inserted with option 82 field before being relayed to the server. The DHCP 82 option contained 2 suboptions which is circuit ID suboption and remote ID suboption. The formats for the circuit ID suboption and the remote ID suboption are as following. For the circuit ID suboption of a standalone switch, the module field is always zero.</td>
</tr>
<tr>
<td>Remote ID suboption format 2 (Using user-defined string as remote ID):</td>
<td></td>
</tr>
<tr>
<td>1. Suboption type</td>
<td>2. Length : the string length of Remote ID suboption</td>
</tr>
<tr>
<td>3. Remote ID type</td>
<td>4. Length : the string length of user-defined string</td>
</tr>
<tr>
<td>5. User-defined string</td>
<td></td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure DHCP relay option 82 remote id :

DES-3028P:4#config dhcp_relay option_82 remote_id user_define "D-Link L2 Switch"

DES-3028P:4#
**show dhcp_relay**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current DHCP/BOOTP relay configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show dhcp_relay {ipif [System]}</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the current DHCP relay configuration for the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>ipif System</code> – The name of the IP interface for which to display the current DHCP relay configuration.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To show the DHCP relay configuration:

```
DES-3028P:4#show dhcp_relay
Command: show dhcp_relay

DHCP/BOOTP Relay Status : Disabled
DHCP/BOOTP Hops Count Limit : 4
DHCP/BOOTP Relay Time Threshold : 0
DHCP Relay Agent Information Option 82 State : Disabled
DHCP Relay Agent Information Option 82 Check : Disabled
DHCP Relay Agent Information Option 82 Policy : Replace
DHCP Relay Agent Information Option 82 Remote ID : 00-19-5B-EF-78-B5

Interface    Server 1       Server 2      Server 3      Server 4
---------    -----------   ------------   -----------  -----------
System       10.58.44.6

DES-3028P:4#```

Example usage:

To show a single IP destination of the DHCP relay configuration:

```
DES-3028P:4#show dhcp_relay ipif System
Command: show dhcp_relay ipif System

Interface    Server 1       Server 2      Server 3      Server 4
---------    -----------   ------------   -----------  -----------
System       10.58.44.6

DES-3028P:4#```

**enable dhcp_relay**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable the DHCP/BOOTP relay function on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable dhcp_relay</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to enable the DHCP/BOOTP relay function on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:
To enable DHCP relay:

```
DES-3028P:4#enable dhcp_relay
Command: enable dhcp_relay
Success.
DES-3028P:4#
```

### disable dhcp_relay

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the DHCP/BOOTP relay function on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable dhcp_relay</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to disable the DHCP/BOOTP relay function on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable DHCP relay:

```
DES-3028P:4#disable dhcp_relay
Command: disable dhcp_relay
Success.
DES-3028P:4#
```
The DES-3028/28G/28P/52/52P implements IEEE 802.1X Port-based and Host-based Access Control. This mechanism is intended to allow only authorized users, or other network devices, access to network resources by establishing criteria for each port on the Switch that a user or network device must meet before allowing that port to forward or receive frames.

### 802.1X Commands

<table>
<thead>
<tr>
<th>Command</th>

</tr>
<tr>
<td>delete 802.1x user</td>
<td>&lt;username 15&gt;</td>
</tr>
<tr>
<td>show 802.1x user</td>
<td></td>
</tr>
</tbody>
</table>
Each command is listed, in detail, in the following sections:

### enable 802.1x

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable the 802.1X server on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable 802.1x</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>enable 802.1x</code> command enables the 802.1X Network Access control application on the Switch. To select between port-based or Host-based, use the <code>config 802.1x auth_mode</code> command.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable 802.1X switch wide:

```
DES-3028P:4#enable 802.1x
Command: enable 802.1x
Success.
DES-3028P:4#
```

### disable 802.1x

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable the 802.1X server on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable 802.1x</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>disable 802.1x</code> command is used to disable the 802.1X Network Access control application on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable 802.1x on the Switch:

```
DES-3028P:4#disable 802.1x
Command: disable 802.1x
Success.
DES-3028P:4#
```
### show 802.1x auth_configuration

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current configuration of the 802.1X server on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show 802.1x auth_configuration {ports &lt;auth_portlist&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show 802.1x auth_configuration</code> command is used to display the 802.1X Port-based or Host-based Network Access control local users currently configured on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>ports &lt;auth_portlist&gt;</code> – Specifies a port or range of ports to view.</td>
</tr>
<tr>
<td></td>
<td>The following details are displayed:</td>
</tr>
<tr>
<td></td>
<td><strong>802.1x Enabled / Disabled</strong> – Shows the current status of 802.1X functions on the Switch.</td>
</tr>
<tr>
<td></td>
<td><strong>Authentication Mode</strong> – Shows the authentication mode, whether it be by MAC address or by port.</td>
</tr>
<tr>
<td></td>
<td><strong>Authentication Protocol</strong> – Shows the authentication protocol suite in use between the Switch and a RADIUS server. May read <code>Radius_Eap</code> or <code>local</code>.</td>
</tr>
<tr>
<td></td>
<td><strong>Port number</strong> – Shows the physical port number on the Switch.</td>
</tr>
<tr>
<td></td>
<td><strong>Capability: Authenticator/None</strong> – Shows the capability of 802.1X functions on the port number displayed above. There are two 802.1X capabilities that can be set on the Switch: Authenticator and None.</td>
</tr>
<tr>
<td></td>
<td><strong>AdminCtlDir: Both / In</strong> – Shows whether a controlled Port that is unauthorized will exert control over communication in both receiving and transmitting directions, or just the receiving direction.</td>
</tr>
<tr>
<td></td>
<td><strong>OpenCtlDir: Both / In</strong> – Shows whether a controlled Port that is unauthorized will exert control over communication in both receiving and transmitting directions, or just the receiving direction.</td>
</tr>
<tr>
<td></td>
<td><strong>Port Control: ForceAuth / ForceUnauth / Auto</strong> – Shows the administrative control over the port’s authorization status. ForceAuth forces the Authenticator of the port to become Authorized. ForceUnauth forces the port to become Unauthorized.</td>
</tr>
<tr>
<td></td>
<td><strong>QuietPeriod</strong> – This is the initialization value of the quiet period timer. The default value is 60s and can be any value between 0-65535.</td>
</tr>
<tr>
<td></td>
<td><strong>TxPeriod</strong> – This is the initialization value of the tx timer. The default value is 30s and can be any value between 1-65535.</td>
</tr>
<tr>
<td></td>
<td><strong>SuppTimeout</strong> – Shows the time to wait for a response from a supplicant (user) for all EAP packets, except for the Request / Identity packets.</td>
</tr>
<tr>
<td></td>
<td><strong>ServerTimeout</strong> – Shows the length of time to wait for a response from a RADIUS server.</td>
</tr>
<tr>
<td></td>
<td><strong>MaxReq</strong> – Shows the maximum number of times to retry sending packets to the supplicant.</td>
</tr>
<tr>
<td></td>
<td><strong>ReAuthPeriod</strong> – Shows the time interval between successive re-authentications.</td>
</tr>
<tr>
<td></td>
<td><strong>ReAuthenticate: Enabled / Disabled</strong> – Shows whether or not to re-authenticate.</td>
</tr>
</tbody>
</table>

**Restrictions**

None.

---

**Example usage:**

To display the 802.1X authentication states:
### show 802.1x auth_state

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current authentication state of the 802.1X server on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show 802.1x auth_state {ports &lt;auth_portlist&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show 802.1x auth_state</code> command is used to display the current authentication state of the 802.1X Port-based or Host-based Network Access Control application on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;auth_portlist&gt;</code> – Specifies a port or range of ports to be viewed.</td>
</tr>
<tr>
<td></td>
<td>The following details what is displayed:</td>
</tr>
<tr>
<td></td>
<td>Port number – Shows the physical port number on the Switch.</td>
</tr>
<tr>
<td></td>
<td>Auth PAE State: Initialize / Disconnected / Connecting /</td>
</tr>
<tr>
<td></td>
<td>Authenticating / Authenticated / Held / ForceAuth / ForceUnauth – Shows the current state of the Authenticator PAE.</td>
</tr>
<tr>
<td></td>
<td>Backend State: Request / Response / Fail / Idle / Initialize / Success /</td>
</tr>
<tr>
<td></td>
<td>Timeout – Shows the current state of the Backend Authenticator.</td>
</tr>
<tr>
<td></td>
<td>Port Status: Authorized / Unauthorized – Shows the result of the authentication process. Authorized means that the user was authenticated, and can access the network. Unauthorized means that the user was not authenticated, and cannot access the network.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the 802.1X auth state for Port-based 802.1X:
DES-3028P:4#show 802.1x auth_state
Command: show 802.1x auth_state

<table>

### config 802.1x auth_mode

**Purpose**
Used to configure the 802.1X authentication mode on the Switch.

**Syntax**
```
config 802.1x auth_mode {port_based | mac_based}
```

**Description**
The `config 802.1x auth_mode` command is used to enable either the port-based or Host-based 802.1X authentication feature on the Switch.

**Parameters**
- `[port_based | mac_based]` - The Switch allows users to authenticate 802.1X by either port or MAC address.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To configure 802.1X authentication by MAC address:
```
DES-3028P:4#config 802.1x auth_mode mac_based
Command: config 802.1x auth_mode mac_based
Success.
```

### config 802.1x capability ports

**Purpose**
Used to configure the 802.1X capability of a range of ports on the Switch.

**Syntax**
```
config 802.1x capability ports [<portlist> | all] [authenticator | none]
```

**Description**
The `config 802.1x` command has two capabilities that can be set for each port, `authenticator` and `none`.

- `<portlist>` - Specifies a port or range of ports to be configured.
- `all` - Specifies all of the ports on the Switch.
- `authenticator` - A user must pass the authentication process to gain access to the network.
- `none` - The port is not controlled by the 802.1X functions.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To configure 802.1X capability on ports 1-10:
```
DES-3028P:4#config 802.1x capability ports 1-10 authenticator
Command: config 802.1x capability ports 1-10 authenticator
Success.
```
### config 802.1x auth_parameter

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the 802.1X Authentication parameters on a range of ports. The default parameter will return all ports in the specified range to their default 802.1X settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config 802.1x auth_parameter ports [&lt;auth_portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config 802.1x auth_parameter</code> command is used to configure the 802.1X Authentication parameters on a range of ports. The default parameter will return all ports in the specified range to their default 802.1X settings.</td>
</tr>
</tbody>
</table>
| Parameters | `<auth_portlist>` – Specifies a port or range of ports to be configured. all – Specifies all of the ports on the Switch. default – Returns all of the ports in the specified range to their 802.1X default settings. direction [both | in] – Determines whether a controlled port blocks communication in both the receiving and transmitting directions, or just the receiving direction. port_control – Configures the administrative control over the authentication process for the range of ports. The user has the following authentication options:  
  - `force_auth` – Forces the Authenticator for the port to become authorized. Network access is allowed.  
  - `auto` – Allows the port’s status to reflect the outcome of the authentication process.  
  - `force_unauth` – Forces the Authenticator for the port to become unauthorized. Network access will be blocked. quiet_period <sec 0-65535> – Configures the time interval between authentication failure and the start of a new authentication attempt. tx_period <sec 1-65535> – Configures the time to wait for a response from a supplicant (user) to send EAP Request/Identity packets. supp_timeout <sec 1-65535> – Configures the time to wait for a response from a supplicant (user) for all EAP packets, except for the Request/Identity packets. server_timeout <sec 1-65535> – Configure the length of time to wait for a response from a RADIUS server. max_req <value 1-10> – Configures the number of times to retry sending packets to a supplicant (user). reauth_period <sec 1-65535> – Configures the time interval between successive re-authentications. enable_reauth [enable | disable] – Determines whether or not the Switch will re-authenticate. Enabled causes re-authentication of users at the time interval specified in the Re-authentication Period field, above. |
| Restrictions | Only Administrator-level users can issue this command. |
Example usage:

To configure 802.1X authentication parameters for ports 1 – 20:

```plaintext
DES-3028P:4# config 802.1x auth_parameter ports 1-20 direction both
Command: config 802.1x auth_parameter ports 1-20 direction both
Success.
DES-3028P:4#
```

### config 802.1x auth_protocol

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the 802.1X authentication protocol on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config 802.1x auth_protocol [local</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config 802.1x auth_protocol</code> command enables users to configure the authentication protocol.</td>
</tr>
<tr>
<td>Parameters</td>
<td>`radius_eap</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the authentication protocol on the Switch:

```plaintext
DES-3028P:4# config 802.1x auth_protocol radius_eap
Command: config 802.1x auth_protocol radius_eap
Success.
DES-3028P:4#
```

### config 802.1x init

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to initialize the 802.1X function on a range of ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config 802.1x init {port_based ports [&lt;auth_portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config 802.1x init</code> command is used to immediately initialize the 802.1X functions on a specified range of ports or for specified MAC addresses operating from a specified range of ports.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>port_based</code> – This instructs the Switch to initialize 802.1X functions based only on the port number. Ports approved for initialization can then be specified.</td>
</tr>
<tr>
<td></td>
<td><code>mac_based</code> – This instructs the Switch to initialize 802.1X functions based only on the port number or the MAC address. MAC addresses approved for initialization can then be specified.</td>
</tr>
<tr>
<td></td>
<td><code>ports &lt;auth_portlist&gt;</code> – Specifies a port or range of ports to be configured.</td>
</tr>
<tr>
<td></td>
<td><code>all</code> – Specifies all of the ports on the Switch.</td>
</tr>
<tr>
<td></td>
<td><code>mac_address &lt;macaddr&gt;</code> – Enter the MAC address to be initialized.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To initialize the authentication state machine of all ports:
config 802.1x reauth

Purpose
Used to configure the 802.1X re-authentication feature of the Switch.

Syntax
```
config 802.1x reauth {port_based ports [<auth_portlist> | all] | mac_based | ports [<portlist> | all] {mac_address <macaddr>}}
```

Description
The `config 802.1x reauth` command is used to re-authenticate a previously authenticated device based on port number.

Parameters
- `port_based` - This instructs the Switch to re-authorize 802.1X functions based only on the port number. Ports approved for re-authorization can then be specified.
- `mac_based` - This instructs the Switch to re-authorize 802.1X functions based only on the port number or the MAC address. MAC addresses approved for re-authorization can then be specified.
- `ports <auth_portlist>` - Specifies a port or range of ports to be re-authorized.
- `all` - Specifies all of the ports on the Switch.
- `mac_address <macaddr>` - Enter the MAC address to be re-authorized.

Restrictions
Only Administrator-level users can issue this command.

Example usage:

To configure 802.1X reauthentication for ports 1-18:

```
DES-3028P:4# config 802.1x reauth port_based ports 1-18
Command: config 802.1x reauth port_based ports 1-18
Success.
DES-3028P:4#
```

config radius add

Purpose
Used to configure the settings the Switch will use to communicate with a RADIUS server.

Syntax
```
config radius add <server_index 1-3> <server_ip> key <passwd 32> [default | {auth_port <udp_port_number 1-65535> | acct_port <udp_port_number 1-65535>}]`
```

Description
The `config radius add` command is used to configure the settings the Switch will use to communicate with a RADIUS server.

Parameters
- `<server_index 1-3>` - Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.
**config radius add**

- `<server_ip>` – The IP address of the RADIUS server.
- `key` – Specifies that a password and encryption key will be used between the Switch and the RADIUS server.
- `<passwd 32>` – The shared-secret key used by the RADIUS server and the Switch. Up to 32 characters can be used.
- `default` – Uses the default UDP port number in both the “auth_port” and “acct_port” settings.
- `auth_port <udp_port_number 1-65535>` – The UDP port number for authentication requests. The default is 1812.
- `acct_port <udp_port_number 1-65535>` – The UDP port number for accounting requests. The default is 1813.

Restrictions
Only Administrator-level users can issue this command.

Example usage:

To configure the RADIUS server communication settings:

```
DES-3028P:4#config radius add 1 10.48.74.121 key dlink default
Command: config radius add 1 10.48.74.121 key dlink default
Success.
DES-3028P:4#
```

**config radius delete**

- **Purpose**
  Used to delete a previously entered RADIUS server configuration.
- **Syntax**
  `config radius delete <server_index 1-3>`
- **Description**
  The `config radius delete` command is used to delete a previously entered RADIUS server configuration.
- **Parameters**
  `<server_index 1-3>` – Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.
- **Restrictions**
  Only Administrator-level users can issue this command.

Example usage:

To delete previously configured RADIUS server communication settings:

```
DES-3028P:4#config radius delete 1
Command: config radius delete 1
Success.
DES-3028P:4#
```

**config radius**

- **Purpose**
  Used to configure the Switch’s RADIUS settings.
- **Syntax**
  `config radius <server_index 1-3> {ipaddress <server_ip> | key <passwd 32> | auth_port <udp_port_number 1-65535> | acct_port <udp_port_number 1-65535>}`
**config radius**

```config radius acct_port <udp_port_number 1-65535>}
```

**Description**
The `config radius` command is used to configure the Switch’s RADIUS settings.

**Parameters**
- `<server_index 1-3>` – Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.
- `ipaddress <server_ip>` – The IP address of the RADIUS server.
- `key` – Specifies that a password and encryption key will be used between the Switch and the RADIUS server.
  - `<passwd 32>` – The shared-secret key used by the RADIUS server and the Switch. Up to 32 characters can be used.
- `auth_port <udp_port_number 1-65535>` – The UDP port number for authentication requests. The default is 1812.
- `acct_port <udp_port_number 1-65535>` – The UDP port number for accounting requests. The default is 1813.

**Restrictions**
Only Administrator-level users can issue this command.

---

**config radius parameter**

**Purpose**
Used to configure parameters for radius servers.

**Syntax**
```
config radius parameter { timeout <int 1-255> | retransmit <int 1-255> }
```

**Description**
Used to configure parameters for radius servers.

**Parameters**
- `timeout <int 1-255>` – The time in second for waiting server reply. Default value is 5 seconds.
- `retransmit <int 1-255>` – The count for re-transmit. Default value is 2.

**Restrictions**
Only Administrator-level users can issue this command.

---

**Example usage:**

To configure the RADIUS settings:

```
DES-3028P:4# config radius 1 10.48.74.121 key dlink default
Command: config radius 1 10.48.74.121 key dlink default
Success.

DES-3028P:4#
```

To configure the timeout option for radius servers:

```
DES-3028P:4# config radius parameter timeout 3
Command: config radius parameter timeout 3
Success.

DES-3028P:4#
```
**show radius**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current RADIUS configurations on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show radius</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show radius</code> command is used to display the current RADIUS configurations on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display RADIUS settings on the Switch:

```
DES-3028P:4#show radius
Command: show radius

Timeout : 5 seconds
Retransmit : 2

Index  IP Address          Auth-Port  Acct-Port  Status          Key
Number     Number    Number    Number
-----  ------------------  ---------  ---------  --------------  ---------------
1       10.1.1.1             1812       1813       Active         switch
2       20.1.1.1             1800       1813       Active         des3226
3       30.1.1.1             1812       1813       Active         dlink

Total Entries : 3

DES-3028P:4#
```

**create 802.1x guest_vlan**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure a pre-existing VLAN as a 802.1X Guest VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>create 802.1x guest_vlan &lt;vlan_name 32&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>create 802.1x guest_vlan</code> command is used to configure a pre-defined VLAN as a 802.1X Guest VLAN. Guest 802.1X VLAN clients are those who have not been authorized for 802.1X or they haven’t yet installed the necessary 802.1X software, yet would still like to have limited access rights on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vlan_name 32&gt;</code> – Enter an alphanumeric string of no more than 32 characters to define a pre-existing VLAN as a 802.1X Guest VLAN. This VLAN must have first been created with the <code>create vlan</code> command mentioned earlier in this manual.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command. Users must have already previously created a VLAN using the <code>create vlan</code> command. Only one VLAN can be set as the 802.1X Guest VLAN.</td>
</tr>
</tbody>
</table>

Example usage:

To configure a previously created VLAN as an 802.1X Guest VLAN for the Switch:

```
```

159
**config 802.1x guest_vlan ports**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure ports for a pre-existing 802.1X guest VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config 802.1x guest_vlan ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config 802.1x guest_vlan ports</code> command is used to configure ports to be enabled or disabled for the 802.1X guest VLAN.</td>
</tr>
</tbody>
</table>
| Parameters | `<portlist>` – Specify a port or range of ports to be configured for the 802.1X Guest VLAN.  
`all` – Specify this parameter to configure all ports for the 802.1X Guest VLAN.  
`state [enable | disable]` – Use these parameters to enable or disable port listed here as enabled or disabled for the 802.1X Guest VLAN. |
| Restrictions | Only Administrator-level users can issue this command.  
Users must have already previously created a VLAN using the `create vlan` command. If the specific port state changes from an enabled state to a disabled state, these ports will return to the default VLAN. |

**Example usage:**

To configure the ports for a previously created 802.1X Guest VLAN as enabled.

```
DES-3028P:4#config 802.1x guest_vlan ports 1-5 state enable
Command: config 802.1x guest_vlan ports 1-5 state enable
Success.

DES-3028P:4#
```

**show 802.1x guest_vlan**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to view the configurations for a 802.1X Guest VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show 802.1x guest_vlan</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show 802.1x guest_vlan</code> command is used to display the settings for the VLAN that has been enabled as an 802.1X Guest VLAN. Guest 802.1X VLAN clients are those who have not been authorized for 802.1X or they haven't yet installed the necessary 802.1X software, yet would still like to have limited access rights on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
</tbody>
</table>
| Restrictions | None.  
This VLAN is only supported for port-based 802.1X and must have already been previously created using the `create vlan` command. Only one VLAN can be set as the 802.1X Guest VLAN. |

**Example usage:**

To configure the configurations for a previously created 802.1X Guest VLAN.
DES-3028P:4#show 802.1x guest_vlan
Command: show 802.1x guest_vlan

Guest VLAN Setting
-----------------------------------------------------------
Guest VLAN : Trinity
Enable guest VLAN ports: 1-5

DES-3028P:4#

delete 802.1x guest_vlan

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete a 802.1X Guest VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>delete 802.1x guest_vlan {&lt;vlan_name 32&gt;}&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The delete 802.1x guest_vlan command is used to delete an 802.1X Guest VLAN. Guest 802.1X VLAN clients are those who have not been authorized for 802.1X or they haven’t yet installed the necessary 802.1X software, yet would still like to have limited access rights on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;vlan_name 32&gt; – Enter the VLAN name of the Guest 802.1X VLAN to be deleted.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command. Users must have already previously created a VLAN using the create vlan command. Only one VLAN can be set as the 802.1X Guest VLAN.</td>
</tr>
</tbody>
</table>

Example usage:
To delete a previously created 802.1X Guest VLAN.

DES-3028P:4#delete 802.1x guest_vlan Trinity
Command: delete 802.1x guest_vlan Trinity
Success.

DES-3028P:4#

show acct_client

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current RADIUS accounting client.</th>

### create 802.1x user

**Purpose**: Used to create a new 802.1X user.

**Syntax**: `create 802.1x user <username 15>

**Description**: The `create 802.1x user` command is used to create new 802.1X users.

**Parameters**

- `<username 15>`: A username of up to 15 alphanumeric characters in length.

**Restrictions**: Only Administrator-level users can issue this command.

**Example usage**:

To create an 802.1X user:

```
DES-3028P:4# create 802.1x user dtremblett
Command: create 802.1x user dtremblett

Enter a case-sensitive new password:******
Enter the new password again for confirmation:******
Success.

DES-3028P:4#
```

### show 802.1x user

**Purpose**: Used to display the 802.1X user accounts on the Switch.

**Syntax**: `show 802.1x user`

**Description**: The `show 802.1x user` command is used to display the 802.1X Port-based or Host-based Network Access control local users currently configured on the Switch.

**Parameters**: None.

**Restrictions**: None.

**Example usage**:

To view 802.1X users currently configured on the Switch:

```
DES-3028P:4# show 802.1x user
Command: show 802.1x user

Index                     UserName
--------------            --------------
Darren                    Trinity
Total Entries: 1

DES-3028P:4#
```

### delete 802.1x user

**Purpose**: Used to delete an 802.1X user account on the Switch.

**Syntax**: `delete 802.1x user <username 15>

**Description**: The `delete 802.1x user` command is used to delete the 802.1X Port-based or Host-based Network Access control local users currently...
### delete 802.1x user

<table>
<thead>
<tr>
<th>Parameters</th>
<th>&lt;username 15&gt; – A username can be as many as 15 alphanumeric characters.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To delete 802.1X users:

```
DES-3028P:4# delete 802.1x user dtremblett
Command: delete 802.1x user dtremblett

Are you sure to delete the user?(y/n)
Success.

DES-3028P:4#
```
## ACCESS CONTROL LIST (ACL) COMMANDS

The DES-3028/28G/28P/52/52P implements Access Control Lists that enable the Switch to deny network access to specific devices or device groups based on IP settings and MAC address.

The access profile commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create access_profile</td>
<td>create access_profile [ethernet {vlan</td>
</tr>
<tr>
<td>delete access_profile</td>
<td>delete access_profile [profile_id &lt;value 1-256&gt;</td>
</tr>
<tr>
<td>show access_profile</td>
<td>show access_profile profile_id &lt;value 1-256&gt;</td>
</tr>
<tr>
<td>enable cpu_interface_filtering</td>
<td>enable cpu_interface_filtering</td>
</tr>
<tr>
<td>disable cpu_interface_filtering</td>
<td>disable cpu_interface_filtering</td>
</tr>
<tr>
<td>create cpu access_profile</td>

</table>
Access profiles allow users to establish criteria to determine whether or not the Switch will forward packets based on the information contained in each packet’s header.

Creating an access profile is divided into two basic parts. First, an access profile must be created using the create access_profile command. For example, if users want to deny all traffic to the subnet 10.42.73.0 to 10.42.73.255, users must first create an access profile that instructs the Switch to examine all of the relevant fields of each frame.

First create an access profile that uses IP addresses as the criteria for examination:

**create access_profile ip source_ip_mask 255.255.255.0 profile_id 1 profile_name 1**

Here we have created an access profile that will examine the IP field of each frame received by the Switch. Each source IP address the Switch finds will be combined with the source_ip_mask with a logical AND operation. The profile_id parameter is used to give the access profile an identifying number – in this case, 1 – and it is used to assign a priority in case a conflict occurs. The profile_id establishes a priority within the list of profiles. A lower profile_id gives the rule a higher priority. In case of a conflict in the rules entered for different profiles, the rule with the highest priority (lowest profile_id) will take precedence. See below for information regarding limitations on access profiles and access rules.

The deny parameter instructs the Switch to filter any frames that meet the criteria – in this case, when a logical AND operation between IP address specified in the next step and the ip source_mask match.

The default for an access profile on the Switch is to permit traffic flow. If users want to restrict traffic, users must use the deny parameter.

Now that an access profile has been created, users must add the criteria the Switch will use to decide if a given frame should be forwarded or filtered. We will use the config access_profile command to create a new rule that defines the criteria we want. Let’s further specify in the new rule to deny access to a range of IP addresses through an individual port: Here, we want to filter any packets that have an IP source address between 10.42.73.0 and 10.42.73.255, and specify the port that will not be allowed:

**config access_profile profile_id 1 add access_id 1 ip source_ip 10.42.73.1 port 7 deny**

We use the profile_id 1 which was specified when the access_id was created. The add parameter instructs the Switch to add the criteria that follows to the list of rules that are associated with access profile 1. For each rule entered into the access profile, users can assign an access_id that identifies the rule within the list of rules. The access_id is an index number only and does not effect priority within the profile_id. This access_id may be used later if users want to remove the individual rule from the profile.

The ip parameter instructs the Switch that this new rule will be applied to the IP addresses contained within each frame’s header. source_ip tells the Switch that this rule will apply to the source IP addresses in each frame’s header. The IP address 10.42.73.1 will be combined with the ip source_mask 255.255.255.0 to give the IP address 10.42.73.0 for any source IP address between 10.42.73.0 to 10.42.73.255. Finally the restricted port - port number 7 - is specified.

---

**create access_profile**

**Syntax**

```
create access_profile [ethernet {vlan | source_mac <macmask> | destination_mac <macmask> | 802.1p | ethernet_type}] ip {vlan | source_ip_mask <netmask> | destination_ip_mask <netmask> | dscp | [icmp | igmp | tcp {src_port_mask <hex 0x0-0xffffffff> | dst_port_mask <hex 0x0-0xffffffff> | flag_mask [all | {urg | ack | psh | rst | syn | fin}]} | udp {src_port_mask <hex 0x0-0xffffffff> | dst_port_mask <hex 0x0-0xffffffff> | protocol_id_mask <hex 0x0-0xffffffff> | packet_content_mask {offset_0-15 <hex 0x0-0xffffffff> | offset_16-31 <hex 0x0-0xffffffff> | offset_32-47 <hex 0x0-0xffffffff> | offset_48-63 <hex 0x0-0xffffffff> | offset_64-79 <hex 0x0-0xffffffff> | offset_80-95 <hex 0x0-0xffffffff> | offset_96-111 <hex 0x0-0xffffffff> | offset_112-127 <hex 0x0-0xffffffff> | offset_128-143 <hex 0x0-0xffffffff> | offset_144-159 <hex 0x0-0xffffffff> | offset_160-175 <hex 0x0-0xffffffff> | offset_176-191 <hex 0x0-0xffffffff> | offset_192-207 <hex 0x0-0xffffffff> | offset_208-223 <hex 0x0-0xffffffff> | offset_224-239 <hex 0x0-0xffffffff> | offset_240-255 <hex 0x0-0xffffffff}> | packet_length <value 0-65535> | packet_content <value 0-65535> | time_range <range_name 32>] | delete_access_id <value 1-5>]
```

**Parameters**

- **Command**
  - tcp {src_port <value 0-65535> | dst_port <value 0-65535> | urg | ack | psh | rst | syn | fin}
  - udp {src_port <value 0-65535> | dst_port <value 0-65535> | protocol_id <value 0-255>}
  - offset_0-15 <hex 0x0-0xffffffff> | offset_16-31 <hex 0x0-0xffffffff> | offset_32-47 <hex 0x0-0xffffffff> | offset_48-63 <hex 0x0-0xffffffff> | offset_64-79 <hex 0x0-0xffffffff> | offset_80-95 <hex 0x0-0xffffffff> | offset_96-111 <hex 0x0-0xffffffff> | offset_112-127 <hex 0x0-0xffffffff> | offset_128-143 <hex 0x0-0xffffffff> | offset_144-159 <hex 0x0-0xffffffff> | offset_160-175 <hex 0x0-0xffffffff> | offset_176-191 <hex 0x0-0xffffffff> | offset_192-207 <hex 0x0-0xffffffff> | offset_208-223 <hex 0x0-0xffffffff> | offset_224-239 <hex 0x0-0xffffffff> | offset_240-255 <hex 0x0-0xffffffff>
- **show cpu access_profile**
  - profile_id <value 1-3>

---

Access profiles allow users to establish criteria to determine whether or not the Switch will forward packets based on the information contained in each packet’s header.
## create access_profile

The `create access_profile` command is used to create an access profile on the Switch and to define which parts of each incoming frame’s header the Switch will examine. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the `config access_profile` command, below.

### Parameters

- **ethernet** – Specifies that the Switch will examine the layer 2 part of each packet header.
- **vlan** – Specifies that the Switch will examine the VLAN part of each packet header.
- **source_mac <macmask>** – Specifies a MAC address mask for the source MAC address. This mask is entered in a hexadecimal format.
- **destination_mac <macmask>** – Specifies a MAC address mask for the destination MAC address.
- **802.1p** – Specifies that the Switch will examine the 802.1p priority value in the frame’s header.
- **ethernet_type** – Specifies that the Switch will examine the Ethernet type value in each frame’s header.
- **ip** – Specifies that the Switch will examine the IP address in each frame’s header.
- **vlan** – Specifies a VLAN mask.
- **source_ip_mask <netmask>** – Specifies an IP address mask for the source IP address.
- **destination_ip_mask <netmask>** – Specifies an IP address mask for the destination IP address.
- **dscp** – Specifies that the Switch will examine the DiffServ Code Point (DSCP) field in each frame’s header.
- **icmp** – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field in each frame’s header.
- **igmp** – Specifies that the Switch will examine each frame’s Internet Group Management Protocol (IGMP) field.
- **src_port_mask <hex 0x0-0xffff>** – Specifies a TCP port mask for the source port.
- **dst_port_mask <hex 0x0-0xffff>** – Specifies a TCP port mask for the destination port.
- **flag_mask** – Enter the appropriate flag_mask parameter. All incoming packets have TCP port numbers contained in them as the forwarding criterion. These numbers have flag bits associated with them which are parts of a packet that determine what to do with the packet. The user may deny packets by denying certain flag bits within the packets. The user may choose between all, urg (urgent), ack (acknowledgement), psh (push), rst (reset), syn (synchronize) and fin (finish).
- **udp** – Specifies that the Switch will examine each frame’s Universal Datagram Protocol (UDP) field.
- **src_port_mask <hex 0x0-0xffff>** – Specifies a UDP port mask for the source port.
- **dst_port_mask <hex 0x0-0xffff>** – Specifies a UDP port mask for the destination port.
create access_profile

**protocol_id_mask** – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.

**packet_content_mask** – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:

- **offset_0-15** – Enter a value in hex form to mask the packet from the beginning of the packet to the 15th byte.
- **offset_16-31** – Enter a value in hex form to mask the packet from byte 16 to byte 31.
- **offset_32-47** – Enter a value in hex form to mask the packet from byte 32 to byte 47.
- **offset_48-63** – Enter a value in hex form to mask the packet from byte 48 to byte 63.
- **offset_64-79** – Enter a value in hex form to mask the packet from byte 64 to byte 79.

**profile_id <value 1-256>** – Sets the relative priority for the profile. Priority is set relative to other profiles where the lowest profile ID has the highest priority. The user may enter a profile ID number between 1 to 256.

Restrictions

Only Administrator-level users can issue this command.

Example usage:

To create an access list rules:

```
DES-3028P:4# create access_profile ip vlan source_ip_mask 20.0.0.0
destination_ip_mask 10.0.0.0 dscp icmp profile_id 101
```

Success.

```
DES-3028P:4#
```

delete access_profile

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to delete a previously created access profile.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>**delete access_profile [profile_id &lt;value 1-256&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The <strong>delete access_profile</strong> command is used to delete a previously created access profile on the Switch.</td>
</tr>
</tbody>
</table>
| Parameters | **profile_id <value 1-256>** – Enter an integer between 1 and 256 that is used to identify the access profile that will be deleted with this command. This value is assigned to the access profile when it is created with the **create access_profile** command. The user may enter a profile ID number between 1 and 256.  
**all** – Specifies all access list profiles will be deleted. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To delete the access profile with a profile ID of 1:

```
DES-3028P:4# delete access_profile profile_id 1
Command: delete access_profile profile_id 1
Success.
DES-3028P:4#
```
### config access_profile

**Purpose**
Used to configure an access profile on the Switch and to define specific values that will be used to by the Switch to determine if a given packet should be forwarded or filtered. Masks entered using the `create access_profile` command will be combined, using a logical AND operational method, with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the `config access_profile` command, below.

**Syntax**
```
config access_profile profile_id <value 1-256> [add access_id <value 1-65535>] [ethernet {vlan <vlan_name 32> | source_mac <macaddr> | destination_mac <macaddr> | 802.1p <value 0-7> | ethernet_type <hex 0x0-0xffff> } | ip {vlan <vlan_name 32> | source_ip <ipaddr> | destination_ip <ipaddr> | dscp <value 0-63> | [icmp | igmp | tcp {src_port <value 0-65535> | dst_port <value 0-65535> | urg | ack | psh | rst | syn | fin } | udp {src_port <value 0-65535> | dst_port <value 0-65535> | protocol_id <value 0-255>} | packet_content offset <value 0-76> <hex0x0-0xffffffff> {offset <value 0-76> <hex 0x0-0xffffffff> {offset <value 0-76> <hex 0x0-0xffffffff> {offset <value 0-76> <hex 0x0-0xffffffff>}}}} port [<portlist> | all ] [permit{ priority <value 0-7> replace_priority_with <value 0-7} | rx_rate [no_limit |<value 64-1024000>] | deny] {time_range <range_name 32>} | delete access_id <value 1-65535>]
```

**Description**
The `config access_profile` command is used to configure an access profile on the Switch and to enter specific values that will be combined, using a logical AND operational method, with masks entered with the `create access_profile` command, above.

**Parameters**
- `profile_id <value 1-256>` – Enter an integer used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the `create access_profile` command. The profile ID sets the relative priority for the profile and specifies an index number that will identify the access profile being created with this command. Priority is set relative to other profiles where the lowest profile ID has the highest priority. The user may enter a profile ID number between 1 and 256.
- `add access_id <value 1-65535>` – Adds an additional rule to the above specified access profile. The value is used to index the rule created. For information on number of rules that can be created for a given port, please see the introduction to this chapter.
- `auto_assign` – Choose this parameter to configure the Switch to automatically assign a numerical value (between 1 and 65535) for the rule being configured.
- `ethernet` – Specifies that the Switch will look only into the layer 2 part of each packet.
  - `vlan <vlan_name 32>` – Specifies that the access profile will apply to only to this VLAN.
  - `source_mac <macaddr>` – Specifies that the access profile will apply to only packets with this source MAC address.
  - `destination_mac <macaddr>` – Specifies that the access profile will apply to only packets with this destination MAC address.
  - `802.1p <value 0-7>` – Specifies that the access profile will apply only to packets with this 802.1p priority value.
  - `ethernet_type <hex 0x0-0xffff>` – Specifies that the access profile will apply only to packets with this hexadecimal 802.1Q Ethernet type value in the packet header.
config access_profile

Parameters

- **ip** – Specifies that the Switch will look into the IP fields in each packet.
- **vlan <vlan_name 32>** – Specifies that the access profile will apply to only this VLAN.
- **source_ip <ipaddr>** – Specifies that the access profile will apply to only packets with this source IP address.
- **destination_id <value 0-255>** – Specifies that the access profile will apply to only packets with this destination IP address.
- **dscp <value 0-63>** – Specifies that the access profile will apply only to packets that have this value in their Type-of-Service (DiffServ code point, DSCP) field in their IP packet header.
- **icmp** – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field within each packet.
- **igmp** – Specifies that the Switch will examine the Internet Group Management Protocol (IGMP) field within each packet.
- **tcp** – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet.
  - **src_port <value 0-65535>** – Specifies that the access profile will apply only to packets that have this TCP source port in their TCP header.
  - **dst_port <value 0-65535>** – Specifies that the access profile will apply only to packets that have this TCP destination port in their TCP header.
  - **flag_mask** – Enter the type of TCP flag to be masked.
    - **all**: all flags are selected.
    - **urg**: TCP control flag (urgent)
    - **ack**: TCP control flag (acknowledgement)
    - **psh**: TCP control flag (push)
    - **rst**: TCP control flag (reset)
    - **syn**: TCP control flag (synchronize)
    - **fin**: TCP control flag (finish)
  - **udp** – Specifies that the Switch will examine the Universal Datagram Protocol (UDP) field in each packet.
    - **src_port <value 0-65535>** – Specifies that the access profile will apply only to packets that have this UDP source port in their header.
    - **dst_port <value 0-65535>** – Specifies that the access profile will apply only to packets that have this UDP destination port in their header.
  - **protocol_id <value 0-255>** – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.
  - **packet_content** – Specifies that the switch will mask the packet header beginning with the offset value specified as follows:
    - **offset_0-76** – Enter a value in hex form to mask the packet from byte 0 to byte 76.

Parameters

- **port <portlist>** – Specifies the port number on the Switch to permit or deny access for the rule. The user can also configure “all” to specify all ports.
- **permit** – Specifies that packets that match the access profile are permitted to be forwarded by the Switch.
  - **priority <value 0-7>** – This parameter is specified if you want to re-write the 802.1p default priority previously set in the Switch, which is used to determine the CoS queue to which packets are forwarded to. Once this field is specified, packets accepted by the Switch that match this priority are forwarded to the CoS queue specified previously by the user.
  - **{replace_priority_with <value 0-7>**} – Enter this parameter if you want to re-write the 802.1p default priority of a packet to the value entered in the Priority field, which meets the criteria specified previously in this command, before forwarding it on to the specified CoS queue. Otherwise, a packet will have its incoming 802.1p user priority re-written to its original value before being forwarded by the Switch.
  - **rx_rate** – Use this to limit Rx bandwidth for the profile being configured. This rate is
config access_profile

- implemented using the following equation – 64 value = 64kbit/sec. The user may select a value between 64-1024000 or no limit. The default setting is no limit.
- deny – Specifies that packets that do not match the access profile are not permitted to be forwarded by the Switch and will be filtered.
- time_range <range_name 32> – Choose this parameter and enter the name of the Time Range settings that has been previously configured using the config time_range command. This will set specific times when this access rule will be enabled or disabled on the Switch.
- delete access_id <value 1-65535> – Use this command to delete a specific ACL rule from the Ethernet profile, IP profile or packet_content profile. Up to 256 rules may be specified for all access profiles.

Restrictions

- Only Administrator-level users can issue this command.
- Restriction: When the ACL rule is configured, the VLAN and DSCP cant be configured with source IP, destination IP or replace priority it can only be configured with DSCP.

Example usage:

To configure the access profile with the profile ID of 1 to filter frames on port 7 that have IP addresses in the range between 10.42.73.0 to 10.42.73.255:

```
DES-3028P:4# config access_profile profile_id 1 add access_id 1 ip source_ip 10.42.73.1 port 7 deny
Command: config access_profile profile_id 1 add access_id 1 ip source_ip 10.42.73.1 port 7 deny
Success.
DES-3028P:4#
```

NOTE: Address Resolution Protocol (ARP) is the standard for finding a host's hardware address (MAC Address). However, ARP is vulnerable as it can be easily spoofed and utilized to attack a LAN (known as ARP spoofing attack). For a more detailed explanation on how ARP protocol works and how to employ D-Link's advanced unique Packet Content ACL to prevent an ARP spoofing attack, please see Appendix B, at the end of this manual.

show access_profile

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the currently configured access profiles on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show access_profile profile_id &lt;value 1-256&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The <strong>show access_profile</strong> command is used to display the currently configured access profiles.</td>
</tr>
<tr>
<td>Parameters</td>
<td>profile_id &lt;value 1-256&gt; – Specify the profile id to display only the access rules configuration for a single profile ID. The user may enter a profile ID number between 1 and 256.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>
Example usage:

To display all of the currently configured access profiles on the Switch:

```
DES-3028P:4#show access_profile
Command: show access_profile

Access Profile Table

Profile ID: 101 Type: IPv4 Frame Filter - ICMP

Total Unused Rule Entries: 256
```

---

create cpu access_profile

**Purpose**

Used to create an access profile specifically for CPU Interface Filtering on the Switch and to define which parts of each incoming frame’s header the Switch will examine. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the `config cpu access_profile` command, below.

**Syntax**

```
create cpu access_profile <value 1-3> [ethernet {vlan | source_mac <macmask> | destination_mac <macmask> | 802.1p | ethernet_type} | ip {vlan | source_ip_mask <netmask> | destination_ip_mask <netmask> | dscp | icmp {type | code} | igmp {type} | tcp {src_port_mask <hex 0x0-0xffff> | dst_port_mask <hex 0x0-0xffff> | flag_mask {all | urg | ack | psh | rst | syn | fin}} | udp {src_port_mask <hex 0x0-0xffff> | dst_port_mask <hex 0x0-0xffff>} | protocol_id_mask <hex 0x0-0xff> | user_define <hex 0x0-0xffffffff>} | packet_content_mask {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_16-31<hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>}]
```

**Description**

The `create cpu access_profile` command is used to create an access profile used only for CPU Interface Filtering. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the `config cpu access_profile` command, below.

**Parameters**

- `ethernet` – Specifies that the Switch will examine the layer 2 part of each packet header.
  - `vlan` – Specifies that the Switch will examine the VLAN part of each packet header.
  - `source_mac <macmask>` – Specifies to examine the source MAC address mask.
  - `destination_mac <macmask>` – Specifies to examine the destination MAC address mask.
  - `802.1p` – Specifies that the Switch will examine the 802.1p priority value in the frame’s header.
  - `ethernet_type` – Specifies that the Switch will examine the Ethernet type value in each
create cpu access_profile

frame’s header.

ip – Specifies that the switch will examine the IP address in each frame’s header.

- vlan – Specifies a VLAN mask.

- source_ip_mask <netmask> – Specifies an IP address mask for the source IP address.

- destination_ip_mask <netmask> – Specifies an IP address mask for the destination IP address.

- dscp – Specifies that the Switch will examine the DiffServ Code Point (DSCP) field in each frame’s header.

- icmp – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field in each frame’s header.
  
  - type – Specifies that the Switch will examine each frame’s ICMP Type field.
  
  - code – Specifies that the Switch will examine each frame’s ICMP Code field.

- igmp – Specifies that the Switch will examine each frame’s Internet Group Management Protocol (IGMP) field.
  
  - type – Specifies that the Switch will examine each frame’s IGMP Type field.

- tcp – Specifies that the Switch will examine each frame’s Transport Control Protocol (TCP) field.
  
  - src_port_mask <hex 0x0-0xffff> – Specifies a TCP port mask for the source port.
  
  - dst_port_mask <hex 0x0-0xffff> – Specifies a TCP port mask for the destination port.

  - flag_mask [ all | {urg | ack | psh | rst | syn | fin}] – Enter the appropriate flag_mask parameter. All incoming packets have TCP port numbers contained in them as the forwarding criterion. These numbers have flag bits associated with them which are parts of a packet that determine what to do with the packet. The user may deny packets by denying certain flag bits within the packets. The user may choose between all, urg (urgent), ack (acknowledgement), psh (push), rst (reset), syn (synchronize) and fin (finish).

- udp – Specifies that the switch will examine each frame’s Universal Datagram Protocol (UDP) field.
  
  - src_port_mask <hex 0x0-0xffff> – Specifies a UDP port mask for the source port.
  
  - dst_port_mask <hex 0x0-0xffff> – Specifies a UDP port mask for the destination port.

- protocol_id_mask <hex 0x0-0xff> – Specifies that the Switch will examine each frame’s Protocol ID field using the hex form entered here.

- user_define_mask <hex 0x0-0xffffffff> – Specifies that the rule applies to the IP protocol ID and the mask options behind the IP header.

- packet_content_mask – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:
  
  - offset_0-15 – Enter a value in hex form to mask the packet from byte 0 to byte 15.
  
  - offset_16-31 – Enter a value in hex form to mask the packet from byte 16 to byte 31.
  
  - offset_32-47 – Enter a value in hex form to mask the packet from byte 32 to byte 47.
  
  - offset_48-63 – Enter a value in hex form to mask the packet from byte 48 to byte 63.
  
  - offset_64-79 – Enter a value in hex form to mask the packet from byte 64 to byte 79.

profile_id <value 1-3> – Enter an integer between 1 and 3 that is used to identify the CPU access profile to be created with this command.

Restrictions
Only Administrator-level users can issue this command.

Example usage:

To create a CPU access profile:
DES-3028P:4# create cpu access_profile profile_id 1 ip vlan
source_ip_mask 20.0.0.0 destination_ip_mask 10.0.0.0 dscp icmp type code
Command: create cpu access_profile profile_id 1 ip vlan source_ip_mask 20.0.0.0
destination_ip_mask 10.0.0.0 dscp icmp type code
Success.
DES-3028P:4#
### delete cpu access_profile

**Purpose**
Used to delete a previously created CPU access profile.

**Syntax**
```plaintext
delete cpu access_profile profile_id <value 1-3>
```

**Description**
The `delete cpu access_profile` command is used to delete a previously created CPU access profile.

**Parameters**
- `profile_id <value 1-3>` – Enter an integer between 1 and 3 that is used to identify the CPU access profile to be deleted with this command. This value is assigned to the access profile when it is created with the `create cpu access_profile` command.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To delete the CPU access profile with a profile ID of 1:

```
DES-3028P:4#delete cpu access_profile profile_id 1
Command: delete cpu access_profile profile_id 1
Success.
DES-3028P:4#
```

### config cpu access_profile

**Purpose**
Used to configure a CPU access profile used for CPU Interface Filtering and to define specific values that will be used to by the Switch to determine if a given packet should be forwarded or filtered. Masks entered using the `create cpu access_profile` command will be combined, using a logical AND operational method, with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the `config cpu access_profile` command, below.

**Syntax**
```plaintext
config cpu access_profile profile_id <value 1-3> [add access_id <value 1-5> [ ethernet {vlan <vlan_name 32> | source_mac <macaddr> | destination_mac <macaddr> | 802.1p <value 0-7> | ethernet_type <hex 0x0-0xffff> } | ip {vlan <vlan_name 32> | source_ip <ipaddr> | destination_ip <ipaddr> | dscp <value 0-63> | [icmp {type <value 0-255> | code <value 0-255> | igmp {type <value 0-255> | tcp {src_port <value 0-65535> | dst_port <value 0-65535> | urg | ack | psh | rst | syn | fin } | udp {src_port <value 0-65535> | dst_port <value 0-65535> } | protocol_id <value 0-255> {user_define<hex 0x0-0xffffffff>]} | packet_content {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_48-63 <hex 0x0-0xffffffff> | offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> } | offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> | offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> ]} port [<portlist> | all] [permit | deny] {time_range <range_name 32>} | delete access_id <value 1-5>]
```

**Description**
The `config cpu access_profile` command is used to configure a CPU access profile for CPU Interface Filtering and to enter specific values that will be combined, using a logical AND operational method, with masks entered with the `create cpu access_profile` command, above.

**Parameters**
- `profile_id <value 1-3>` – Enter an integer used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the `create cpu access_profile` command. The profile ID sets the relative priority for the profile and specifies an index number that will identify the access profile being created with this command. Priority is set relative to other profiles where the lowest profile ID has the highest priority.
- `add access_id <value 1-5>` – Adds an additional rule to the above specified access profile.
config cpu access_profile

The value is used to index the rule created.

ethernet – Specifies that the Switch will look only into the layer 2 part of each packet.

vlan <vlan_name 32> – Specifies that the access profile will apply to only to this VLAN.

source_mac <macaddr> – Specifies that the access profile will apply to this source MAC address.

destination_mac <macaddr> – Specifies that the access profile will apply to this destination MAC address.

ethernet_type <hex 0x0-0xffff> – Specifies that the access profile will apply only to packets with this hexadecimal 802.1Q Ethernet type value in the packet header.

ip – Specifies that the Switch will look into the IP fields in each packet.

vlan <vlan_name 32> – Specifies that the access profile will apply to only this VLAN.

source_ip <ipaddr> – Specifies that the access profile will apply to only packets with this source IP address.

destination_ip <ipaddr> – Specifies that the access profile will apply to only packets with this destination IP address.

dscp <value 0-63> – Specifies that the access profile will apply only to packets that have this value in their Type-of-Service (DiffServ code point, DSCP) field in their IP packet header.

icmp – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field within each packet.

igmp – Specifies that the Switch will examine the Internet Group Management Protocol (IGMP) field within each packet.

tcp – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet.

src_port <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP source port in their TCP header.

dst_port <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP destination port in their TCP header.

protocol_id <value 0-255> – Specifies that the Switch will examine the Protocol field in each packet and if this field contains the value entered here, apply the following rules.

udp – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet.

src_port <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP source port in their header.

dst_port <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP destination port in their header.

protocol_id <value 0-255> – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.

user_define_mask <hex 0x0-0xffffffff> – Specifies that the rule applies to the IP protocol ID and the mask options behind the IP header.

packet_content_mask – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:

offset_0-76 - Enter a value in hex form to mask the packet from byte 0 to byte 76.

<portlist> – Specifies a port or range of ports to be configured.

permit | deny – Specify that the packet matching the criteria configured with command will either be permitted entry to the cpu or denied entry to the CPU.

time_range <range_name 32> – Choose this parameter and enter the name of the Time Range settings that has been previously configured using the config time_range command. This will set specific times when this access rule will be enabled or disabled on the Switch.

delete access_id <value 1-5> – Use this to remove a previously created access rule in a

Total Rule Entries: 0

DES-3028P:4#
```
**TIME RANGE COMMANDS**

The Time Range commands are used in conjunction with the Access Profile commands listed in the previous chapter to determine a starting point and an ending point, based on days of the week, when an Access Profile configuration will be enabled on the Switch. Once configured here, the time ranges will to be applied to an access profile rule using the `config access_profile profile_id` command.

**NOTE:** The Time Range commands are based on the time settings of the Switch. Make sure to configure the time for the Switch appropriately for these commands using commands listed in the following chapter, *Time and SNTP Commands*.

The Time Range commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config time_range</td>
<td><code>&lt;range_name 32&gt; [hours start_time &lt;time hh:mm:ss&gt; end_time &lt;time hh:mm:ss&gt; weekdays &lt;daylist&gt; [ delete]</code></td>
</tr>
<tr>
<td>show time_range</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config time_range**

**Purpose**

Used to configure a time range in which an access profile rule is to be enabled.

**Syntax**

```
config time_range <range_name 32> [hours start_time <time hh:mm:ss> end_time <time hh:mm:ss> weekdays <daylist> [ delete]
```

**Description**

This command is to be used in conjunction with an access profile rule to determine a period of time when an access profile and an associated rule are to be enabled on the Switch. Remember, this time range can only be applied to one period of time and also, it is based on the time set on the Switch.

**Parameters**

- `<range_name 32>` – Enter a name of no more than 32 alphanumeric characters that will be used to identify this time range on the Switch. This range name will be used in the `config access_profile profile_id` command to identify the access profile and associated rule to be enabled for this time range.
- `hours` – This parameter is used to set the time in the day that this time range is to be set using the following parameters:
  - `start time <time hh:mm:ss>` – Use this parameter to identify the starting time of the time range, in hours, minutes and seconds, based on the 24-hour time system.
  - `end time <time hh:mm:ss>` – Use this parameter to identify the ending time of the time range, in hours, minutes and seconds, based on the 24-hour time system.
- `weekdays` – Use this parameter to determine the days of the week to set this time range.
  - `<daylist>` – The user may set the days of the week here to set this time range in the three letter format (mon, tue, wed...). To specify a day range, separate the daylist using a dash (mon-fri would mean Monday through Friday). To specify a list of days in a week, separate the daylist using a comma, with no spaces (mon,tue,fri would mean Monday, Tuesday and Friday).
- `delete` – Use this parameter to delete a previously configured time range from the system.
config time_range

Restrictions  Only Administrator-level users can issue this command.

Example usage:
To configure the time range time1 to be between 6:30 a.m. and 9:40 p.m., Monday to Friday:

```
DES-3028P:4#config time_range time1 hours start_time 6:30:00 end_time 21:40:00 weekdays mon-fri
Command: config time_range time1 hours start_time 6:30:00 end_time 21:40:00 weekdays mon-fri
Success.
```

show time_range

Purpose  To view the current configurations of the time range set on the Switch.
Syntax  `show time_range`
Description  This command is used to display the currently configured time range(s) set on the Switch.
Parameters  None.
Restrictions  Only Administrator-level users can issue this command.

Example usage:
To view the current time range settings.

```
DES-3028P:4#show time_range
Command: show time_range

Time Range information
--------------------------------------------
Range name : time1  
Weekdays    : Mon,Tue,Wed,Thu,Fri  
Start time  : 06:30:00  
End time    : 21:40:00  
Total entries: 1
```

DES-3028P:4#
SAFEGUARD ENGINE COMMANDS

Periodically, malicious hosts on the network will attack the Switch by utilizing packet flooding (ARP Storm) or other methods. These attacks may increase the CPU utilization beyond its capability. To alleviate this problem, the Safeguard Engine function was added to the Switch’s software.

The Safeguard Engine can help the overall operability of the Switch by minimizing the workload of the Switch while the attack is ongoing, thus making it capable to forward essential packets over its network in a limited bandwidth. When the Switch either (a) receives too many packets to process or (b) exerts too much memory, it will enter an Exhausted mode. When in this mode, the Switch will perform the following tasks to minimize the CPU usage:

a. It will limit bandwidth of receiving ARP packets.

b. It will limit the bandwidth of IP packets received by the Switch.

IP packets may also be limited by the Switch by configuring only certain IP addresses to be accepted. This method can be accomplished through the create trusted_host explained in the previous section. Once the user configures these acceptable IP addresses, other packets containing different IP addresses will be dropped by the Switch, thus limiting the bandwidth of IP packets.

The Safeguard Engine commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>

config safeguard_engine

Restrictions  Only Administrator-level users can issue this command.

Example usage:

To configure the safeguard engine for the Switch:

```
DES-3028P:4#config safeguard_engine state enable utilization rising 45
Command: config safeguard_engine state enable utilization rising 45
Success.
DES-3028P:4#
```

show safeguard_engine

Purpose  Used to display current Safeguard Engine settings.
Syntax  `show safeguard_engine`
Description  This will list the current status and type of the Safeguard Engine settings currently configured.
Parameters  None.
Restrictions  None.

Example usage:

To display the safeguard engine status:

```
DES-3028P:4#show safeguard_engine
Command: show safeguard_engine

Safeguard Engine State : Disabled
Safeguard Engine Current Status : Normal mode

CPU utilization information:
Rising Threshold (20-100) : 30%
Falling Threshold (20-100) : 20%
Trap/Log State : Disabled
Mode : Fuzzy
```

DES-3028P:4#
TRAFFIC SEGMENTATION COMMANDS

Traffic segmentation allows users to further sub-divide VLANs into smaller groups of ports that will help to reduce traffic on the VLAN. The VLAN rules take precedence, and then the traffic segmentation rules are applied.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config traffic_segmentation</td>
<td>[&lt;portlist&gt;] forward_list [null</td>
</tr>
<tr>
<td>show traffic_segmentation</td>
<td>&lt;portlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config traffic_segmentation**

**Purpose**
Used to configure traffic segmentation on the Switch.

**Syntax**
```
config traffic_segmentation [<portlist>] forward_list [null | <portlist>]
```

**Description**
The `config traffic_segmentation` command is used to configure traffic segmentation on the Switch.

**Parameters**
- `<portlist>` – Specifies a port or range of ports that will be configured for traffic segmentation.
- `forward_list` – Specifies a range of ports that will receive forwarded frames from the ports specified in the portlist, above.
  - `null` – No ports are specified
  - `<portlist>` – Specifies a range of ports for the forwarding list. This list must be on the same Switch previously specified for traffic segmentation (i.e. following the `<portlist>` specified above for `config traffic_segmentation`).

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To configure ports 1 through 10 to be able to forward frames to port 11 through 15:
```
DES-3028P:4#config traffic_segmentation 1-10 forward_list 11-15
Command: config traffic_segmentation 1-10 forward_list 11-15
Success.
DES-3028P:4#
```

**show traffic_segmentation**

**Purpose**
Used to display the current traffic segmentation configuration on the Switch.

**Syntax**
```
show traffic_segmentation <portlist>
```

**Description**
The `show traffic_segmentation` command is used to display the current traffic segmentation configuration on the Switch.

**Parameters**
- `<portlist>` – Specifies a port or range of ports for which the current traffic segmentation configuration on the Switch will be displayed.
show traffic_segmentation

Restrictions: The port lists for segmentation and the forward list must be on the same Switch.

Example usage:

To display the current traffic segmentation configuration on the Switch.

```
DES-3028P:4#show traffic_segmentation
Command: show traffic_segmentation

TIME AND SNTP COMMANDS

The Simple Network Time Protocol (SNTP) (an adaptation of the Network Time Protocol (NTP)) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config sntp</td>
<td>{primary &lt;ipaddr&gt;</td>
</tr>
<tr>
<td>show sntp</td>
<td></td>
</tr>
<tr>
<td>enable sntp</td>
<td></td>
</tr>
<tr>
<td>disable sntp</td>
<td></td>
</tr>
<tr>
<td>config time</td>
<td>&lt;date dmmmyyyy &gt; &lt;time hh:mm:ss &gt;</td>
</tr>
<tr>
<td>config time_zone</td>
<td>{operator [+</td>
</tr>
</tbody>
</table>
| config dst    | {disable | repeating {s_week <start_week 1-4,last> | s_day <start_day sun-sat> | s_mth <start_mth 1-12> | s_time <start_time hh:mm> | e_week <end_week 1-4,last> | e_day <end_day sun-sat> | e_mth <end_mth 1-12> | e_time <end_time hh:mm> | offset [30 | 60 | 90 | 120]} | annual {s_date <start_date 1-31> | s_mth <start_mth 1-12> | s_time <start_time hh:mm> | e_date <end_date 1-31> | e_mth <end_mth 1-12> | e_time <end_time hh:mm> | offset [30 | 60 | 90 | 120]}

Each command is listed, in detail, in the following sections.

config sntp

Purpose

Used to setup SNTP service.

Syntax

```
config sntp {primary <ipaddr> | secondary <ipaddr> | poll-interval <int 30-99999>}
```

Description

Use this command to configure SNTP service from an SNTP server. SNTP must be enabled for this command to function (See enable sntp).

Parameters

- **primary** – This is the primary server from which the SNTP information will be taken.
- **<ipaddr>** – The IP address of the primary server.
- **secondary** – This is the secondary server the SNTP information will be taken from in the event the primary server is unavailable.
- **<ipaddr>** – The IP address for the secondary server.
- **poll-interval <int 30-99999>** – This is the interval between requests for updated SNTP information. The polling interval ranges from 30 to 99,999 seconds.

Restrictions

Only Administrator-level users can issue this command. SNTP service must be enabled for this command to function (enable sntp).

Example usage:

To configure SNTP settings:
DES-3028P:4#config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-interval 30
Command: config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-interval 30
Success.

DES-3028P:4#

show sntp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the SNTP information.</th>
</tr>
</thead>
<tbody>
<tr>

<td>This command will display SNTP settings information including the source IP address, time and poll interval.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display SNTP configuration information:

DES-3028P:4#show sntp
Command: show sntp

Current Time Source : System Clock
SNTP : Disabled
SNTP Primary Server : 10.1.1.1
SNTP Secondary Server : 10.1.1.2
SNTP Poll Interval : 30 sec

DES-3028P:4#

enable sntp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>To enable SNTP server support.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>enable sntp</td>
</tr>
<tr>
<td>Description</td>
<td>This will enable SNTP support. SNTP service must be separately configured (see config sntp). Enabling and configuring SNTP support will override any manually configured system time settings.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command. SNTP settings must be configured for SNTP to function (config sntp).</td>
</tr>
</tbody>
</table>

Example usage:

To enable the SNTP function:
DES-3028P:4#enable sntp
Command: enable sntp
Success.
DES-3028P:4#

### disable sntp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>To disable SNTP server support.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable sntp</code></td>
</tr>
<tr>
<td>Description</td>
<td>This will disable SNTP support. SNTP service must be separately configured (see <code>config sntp</code>).</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable SNTP support:

```
DES-3028P:4#disable sntp
Command: disable sntp
Success.
DES-3028P:4#
```

### config time

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to manually configure system time and date settings.</th>

<td><code>config time &lt;date ddmmmyyyy&gt; &lt;time hh:mm:ss&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This will configure the system time and date settings. These will be overridden if SNTP is configured and enabled.</td>
</tr>
</tbody>
</table>
| Parameters       | `date` – Express the date using two numerical characters for the day of the month, three alphabetical characters for the name of the month, and four numerical characters for the year. For example: 03aug2003.  
`time` – Express the system time using the format hh:mm:ss, that is, two numerical characters each for the hour using a 24-hour clock, the minute and second. For example: 19:42:30. |
| Restrictions     | Only Administrator-level users can issue this command. Manually configured system time and date settings are overridden if SNTP support is enabled. |

Example usage:

To manually set system time and date settings:
DES-3028P:4# config time 30jun2003 16:30:30
Command: config time 30jun2003 16:30:30
Success.

DES-3028P:4#

### config time_zone

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to determine the time zone used in order to adjust the system clock.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config time_zone {operator [+</td>
</tr>
<tr>
<td>Description</td>
<td>This will adjust system clock settings according to the time zone. Time zone settings will adjust SNTP information accordingly.</td>
</tr>
<tr>
<td>Parameters</td>
<td>operator – Choose to add (+) or subtract (-) time to adjust for time zone relative to GMT.</td>
</tr>
<tr>
<td></td>
<td>hour – Select the number of hours different from GMT.</td>
</tr>
<tr>
<td></td>
<td>min – Select the number of minutes difference added or subtracted to adjust the time zone.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure time zone settings:

DES-3028P:4# config time_zone operator + hour 2 min 30
Command: config time_zone operator + hour 2 min 30
Success.

DES-3028P:4#
### config dst

**Purpose**

Used to enable and configure time adjustments to allow for the use of Daylight Savings Time (DST).

**Syntax**

```
config dst [disable | repeating {s_week <start_week 1-4,last> | s_day <start_day sun-sat> | s_mth <start_mth 1-12> | s_time start_time hh:mm> | e_week <end_week 1-4,last> | e_day <end_day sun-sat> | e_mth <end_mth 1-12> | e_time <end_time hh:mm> | offset [30 | 60 | 90 | 120]} | annual {s_date start_date 1-31> | s_mth <start_mth 1-12> | s_time <start_time hh:mm> | e_date <end_date 1-31> | e_mth <end_mth 1-12> | e_time <end_time hh:mm> | offset [30 | 60 | 90 | 120]}]
```

**Description**

DST can be enabled and configured using this command. When enabled this will adjust the system clock to comply with any DST requirement. DST adjustment affects system time for both manually configured time and time set using SNTP service.

- **disable** – Disable the DST seasonal time adjustment for the Switch.
- **repeating** – Using repeating mode will enable DST seasonal time adjustment. Repeating mode requires that the DST beginning and ending date be specified using a formula. For example, specify to begin DST on Saturday during the second week of April and end DST on Sunday during the last week of October.
- **annual** – Using annual mode will enable DST seasonal time adjustment. Annual mode requires that the DST beginning and ending date be specified concisely. For example, specify to begin DST on April 3 and end DST on October 14.

**Parameters**

- **s_week** – Configure the week of the month in which DST begins.
  - `<start_week 1-4,last>` – The number of the week during the month in which DST begins where 1 is the first week, 2 is the second week and so on, last is the last week of the month.
- **e_week** - Configure the week of the month in which DST ends.
  - `<end_week 1-4,last>` – The number of the week during the month in which DST ends where 1 is the first week, 2 is the second week and so on, last is the last week of the month.
- **s_day** – Configure the day of the week in which DST begins.
  - `<start_day sun-sat>` – The day of the week in which DST begins expressed using a three character abbreviation (sun, mon, tue, wed, thu, fri, sat)
- **e_day** – Configure the day of the week in which DST ends.
  - `<end_day sun-sat>` – The day of the week in which DST ends expressed using a three character abbreviation (sun, mon, tue, wed, thu, fri, sat)
- **s_mth** – Configure the month in which DST begins.
  - `<start_mth 1-12>` – The month to begin DST expressed as a number.
- **e_mth** – Configure the month in which DST ends.
  - `<end_mth 1-12>` – The month to end DST expressed as a number.
- **s_time** – Configure the time of day to begin DST.
  - `<start_time hh:mm>` – Time is expressed using a 24-hour clock, in hours and minutes.
**config dst**

- **e_time** – Configure the time of day to end DST.
  - `<end_time hh:mm>` – Time is expressed using a 24-hour clock, in hours and minutes.

- **s_date** – Configure the specific date (day of the month) to begin DST.
  - `<start_date 1-31>` – The start date is expressed numerically.

- **e_date** – Configure the specific date (day of the month) to begin DST.
  - `<end_date 1-31>` – The end date is expressed numerically.

- **offset [30 | 60 | 90 | 120]** – Indicates number of minutes to add or to subtract during the summertime. The possible offset times are 30, 60, 90, 120. The default value is 60.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To configure daylight savings time on the Switch:

```
DES-3028P:4# config dst repeating s_week 2 s_day tue s_mth 4 s_time 15:00 e_week 2 e_day wed e_mth 10 e_time 15:30 offset 30
Command: config dst repeating s_week 2 s_day tue s_mth 4 s_time 15:00 e_week 2 e_day wed e_mth 10 e_time 15:30 offset 30
Success.
DES-3028P:4#
```

**show time**

- **Purpose** Used to display the current time settings and status.
- **Syntax** `show time`
- **Description** This will display system time and date configuration as well as display current system time.
- **Parameters** None.
- **Restrictions** None.

Example usage:

To show the time currently set on the Switch’s System clock:
DES-3028P:4#show time
Command: show time

Current Time Source: System Clock
Current Time: 1 Days 01:39:17
Time Zone: GMT +02:30
Daylight Saving Time: Repeating
Offset in minutes: 30
  Repeating From: Apr 2nd Tue 15:00
  To: Oct 2nd Wed 15:30
Annual From: 29 Apr 00:00
To: 12 Oct 00:00

DES-3028P:4#
The ARP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create arpentry</td>
<td><code>&lt;ipaddr&gt; &lt;macaddr&gt;</code></td>
</tr>
<tr>
<td>config arpentry</td>
<td><code>&lt;ipaddr&gt; &lt;macaddr&gt;</code></td>
</tr>
<tr>
<td>delete arpentry</td>
<td>{&lt;ipaddr&gt;</td>
</tr>
<tr>
<td>show arpentry</td>
<td>{ipif [System]</td>
</tr>
<tr>
<td>config arp_aging</td>
<td><code>&lt;value 0-65535&gt;</code></td>
</tr>
<tr>
<td>clear arptable</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create arpentry**

**Purpose**: Used to make a static entry into the ARP table.

**Syntax**: `create arpentry <ipaddr> <macaddr>`

**Description**: This command is used to enter an IP address and the corresponding MAC address into the Switch's ARP table.

**Parameters**
- `<ipaddr>` – The IP address of the end node or station.
- `<macaddr>` – The MAC address corresponding to the IP address above.

**Restrictions**: Only Administrator-level users can issue this command. The Switch supports up to 255 static ARP entries.

**Example Usage:**

To create a static arp entry for the IP address 10.48.74.121 and MAC address 00:50:BA:00:07:36:

```plaintext
DES-3028P:4# create arpentry 10.48.74.121 00-50-BA-00-07-36
Command: create arpentry 10.48.74.121 00-50-BA-00-07-36
Success.
DES-3028P:4#
```
config arpentry

Restrictions Only Administrator-level users can issue this command.

Example Usage:
To configure a static ARP entry for the IP address 10.48.74.12 and MAC address 00:50:BA:00:07:36:

```
DES-3028P:4#config arpentry 10.48.74.12 00-50-BA-00-07-36
Command: config arpentry 10.48.74.12 00-50-BA-00-07-36
Success.
DES-3028P:4#
```

delete arpentry

Purpose Used to delete a static entry into the ARP table.
Syntax `delete arpentry {<ipaddr> | all}`
Description This command is used to delete a static ARP entry, made using the create arpentry command above, by specifying either the IP address of the entry or all. Specifying all clears the Switch’s ARP table.
Parameters `<ipaddr>` – The IP address of the end node or station.
`all` – Deletes all ARP entries.
Restrictions Only Administrator-level users can issue this command.

Example Usage:
To delete an entry of IP address 10.48.74.121 from the ARP table:

```
DES-3028P:4#delete arpentry 10.48.74.121
Command: delete arpentry 10.48.74.121
Success.
DES-3028P:4#
```

config arp_aging time

Purpose Used to configure the age-out timer for ARP table entries on the Switch.
Syntax `config arp_aging time <value 0-65535>`
Description This command sets the maximum amount of time, in minutes, that an ARP entry can remain in the Switch’s ARP table, without being accessed, before it is dropped from the table.
Parameters `time <value 0-65535>` – The ARP age-out time, in minutes. The value may be set in the range of 0-65535 minutes with a default setting of 20 minutes.
Restrictions Only Administrator-level users can issue this command.

Example Usage:
To configure ARP aging time:
DES-3028P:4#config arp_aging time 30
Command: config arp_aging time 30
Success.

DES-3028P:4#

**show arpentry**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the ARP table.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>**show arpentry {ipif [System]</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display the current contents of the Switch’s ARP table.</td>
</tr>
<tr>
<td>Parameters</td>
<td><em>ipif [System]</em> – The name of the IP interface, the end node or station for which the ARP table entry was made, resides on.</td>
</tr>
<tr>
<td></td>
<td><em>ipaddress &lt;ipaddr&gt;</em> – The network address corresponding to the IP interface name above.</td>
</tr>
<tr>
<td></td>
<td><em>static</em> – Displays the static entries to the ARP table.</td>
</tr>
</tbody>
</table>

**Restrictions**

None.

**Example Usage:**

To display the ARP table:

```
DES-3028P:4#show arpentry
Command: show arpentry

ARP Aging Time : 20

DES-3028P:4#
clear arptable

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to remove all dynamic ARP table entries.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>clear arptable</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to remove dynamic ARP table entries from the Switch’s ARP table. Static ARP table entries are not affected.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example Usage:

To remove dynamic entries in the ARP table:

```
DES-3028P:4# clear arptable
Command: clear arptable
Success.
DES-3028P:4#
```
The routing table commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create iproute</td>
<td>[default] &lt;ipaddr&gt; {&lt;metric 1-65535&gt;}</td>
</tr>
<tr>
<td>delete iproute</td>
<td>[default]</td>
</tr>
<tr>
<td>show iproute</td>
<td>{&lt;network_address&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### create iproute default

**Purpose**
Used to create IP route entries to the Switch’s IP routing table.

**Syntax**
create iproute [default] <ipaddr> {<metric 1-65535>}

**Description**
This command is used to create a default static IP route entry to the Switch’s IP routing table.

**Parameters**
- `<ipaddr>` – The gateway IP address for the next hop router.
- `<metric 1-65535>` – Allows the entry of a routing protocol metric entry representing the number of routers between the Switch and the IP address above. The default setting is 1.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To add the default static address 10.48.74.121, with a metric setting of 1, to the routing table:

```
DES-3028P:4# create iproute default 10.48.74.121 1
Command: create iproute default 10.48.74.121 1
Success.
DE-3028P:4#
```

### delete iproute default

**Purpose**
Used to delete a default IP route entry from the Switch’s IP routing table.

**Syntax**
delete iproute [default]

**Description**
This command will delete an existing default entry from the Switch’s IP routing table.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To delete the default IP route 10.53.13.254:
DES-3028P:4#delete iproute default 10.53.13.254
Command: delete iproute default 10.53.13.254
Success.
DES-3028P:4#

**show iproute**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the Switch’s current IP routing table.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show iproute {&lt;network_address&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the Switch’s current IP routing table.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;network_address&gt; – The network IP address.</td>
</tr>
<tr>
<td></td>
<td>static – Select a static IP route.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the contents of the IP routing table:

```
DES-3028P:4#show iproute
Command: show iproute

Routing Table

DES-3028P:4#
MAC NOTIFICATION COMMANDS

The MAC notification commands in the Command Line Interface (CLI) are listed, in the following table, along with their appropriate parameters.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable mac_notification</td>
<td></td>
</tr>
<tr>
<td>disable mac_notification</td>
<td></td>
</tr>
<tr>
<td>config mac_notification</td>
<td>{interval &lt;int 1-2147483647&gt;</td>
</tr>
<tr>
<td>config mac_notification ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show mac_notification</td>
<td></td>
</tr>
<tr>
<td>show mac_notification ports</td>
<td>&lt;portlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable mac_notification**

Purpose: Used to enable global MAC address table notification on the Switch.

Syntax: `enable mac_notification`

Description: This command is used to enable MAC address notification without changing configuration.

Parameters: None.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To enable MAC notification without changing basic configuration:

```
DES-3028P:4#enable mac_notification
Command: enable mac_notification
Success.
DES-3028P:4#
```

**disable mac_notification**

Purpose: Used to disable global MAC address table notification on the Switch.

Syntax: `disable mac_notification`

Description: This command is used to disable MAC address notification without changing configuration.

Parameters: None.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To disable MAC notification without changing basic configuration:

```
DES-3028P:4#disable mac_notification
Command: disable mac_notification
Success.
DES-3028P:4#
```
### config mac_notification

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure MAC address notification.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config mac_notification {interval &lt;int 1-2147483647&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>MAC address notification is used to monitor MAC addresses learned and entered into the FDB.</td>
</tr>
</tbody>
</table>
| Parameters | `interval <sec 1-2147483647>` – The time in seconds between notifications. The user may choose an interval between 1 and 2,147,483,647 seconds.  
`historysize <1-500>` – The maximum number of entries listed in the history log used for notification. |
| Restrictions | Only Administrator-level users can issue this command. |

**Example usage:**

To configure the Switch’s MAC address table notification global settings:

```
DES-3028P:4#config mac_notification interval 1
historysize 500
Command: config mac_notification interval 1
historysize 500
Success.
DES-3028P:4#
```

### config mac_notification ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure MAC address notification status settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config mac_notification ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>MAC address notification is used to monitor MAC addresses learned and entered into the FDB.</td>
</tr>
</tbody>
</table>
| Parameters | `<portlist>` – Specifies a port or range of ports to be configured.  
`all` – Entering this command will set all ports on the system.  
`[enable | disable]` – These commands will enable or disable MAC address table notification on the Switch. |
| Restrictions | Only Administrator-level users can issue this command. |

**Example usage:**

To enable port 7 for MAC address table notification:

```
DES-3028P:4#config mac_notification ports 7 enable
Command: config mac_notification ports 7 enable
Success.
DES-3028P:4#
```
### show mac_notification

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the Switch’s MAC address table notification global settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show mac_notification</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display the Switch’s MAC address table notification global settings.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To view the Switch’s MAC address table notification global settings:

```
DES-3028P:4#show mac_notification
Command: show mac_notification

Global Mac Notification Settings

State : Enabled
Interval : 1
History Size : 1

DES-3028P:4#
```

### show mac_notification ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the Switch’s MAC address table notification status settings.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show mac_notification ports &lt;portlist&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to display the Switch’s MAC address table notification status settings.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specify a port or group of ports to be viewed. Entering this command without the parameter will display the MAC notification table for all ports.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To display all port’s MAC address table notification status settings:

```
DES-3028P:4#show mac_notification ports
Command: show mac_notification ports

<table>
<thead>
<tr>
<th>Port #</th>
<th>MAC Address Table Notification State</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Disabled</td>
</tr>
<tr>
<td>2</td>
<td>Disabled</td>
</tr>
<tr>
<td>3</td>
<td>Disabled</td>
</tr>
<tr>
<td>4</td>
<td>Disabled</td>
</tr>
<tr>
<td>5</td>
<td>Disabled</td>
</tr>
<tr>
<td>6</td>
<td>Disabled</td>
</tr>
<tr>
<td>7</td>
<td>Disabled</td>
</tr>
<tr>
<td>8</td>
<td>Disabled</td>
</tr>
<tr>
<td>9</td>
<td>Disabled</td>
</tr>
</tbody>
</table>
```
<table>
<thead>
<tr>
<th>Port</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>Disabled</td>
</tr>
<tr>
<td>11</td>
<td>Disabled</td>
</tr>
<tr>
<td>12</td>
<td>Disabled</td>
</tr>
<tr>
<td>13</td>
<td>Disabled</td>
</tr>
<tr>
<td>14</td>
<td>Disabled</td>
</tr>
<tr>
<td>15</td>
<td>Disabled</td>
</tr>
<tr>
<td>16</td>
<td>Disabled</td>
</tr>
<tr>
<td>17</td>
<td>Disabled</td>
</tr>
<tr>
<td>18</td>
<td>Disabled</td>
</tr>
<tr>
<td>19</td>
<td>Disabled</td>
</tr>
<tr>

ACCESS AUTHENTICATION CONTROL COMMANDS

The TACACS / XTACACS / TACACS+ / RADIUS commands allow secure access to the Switch using the TACACS / XTACACS / TACACS+ / RADIUS protocols. When a user logs in to the Switch or tries to access the administrator level privilege, he or she is prompted for a password. If TACACS / XTACACS / TACACS+ / RADIUS authentication is enabled on the Switch, it will contact a TACACS / XTACACS / TACACS+ / RADIUS server to verify the user. If the user is verified, he or she is granted access to the Switch.

There are currently three versions of the TACACS security protocol, each a separate entity. The Switch’s software supports the following versions of TACACS:

- **TACACS** (Terminal Access Controller Access Control System) — Provides password checking and authentication, and notification of user actions for security purposes utilizing via one or more centralized TACACS servers, utilizing the UDP protocol for packet transmission.

- **Extended TACACS (XTACACS)** — An extension of the TACACS protocol with the ability to provide more types of authentication requests and more types of response codes than TACACS. This protocol also uses UDP to transmit packets.

- **TACACS+** (Terminal Access Controller Access Control System plus) — Provides detailed access control for authentication for network devices. TACACS+ is facilitated through Authentication commands via one or more centralized servers. The TACACS+ protocol encrypts all traffic between the Switch and the TACACS+ daemon, using the TCP protocol to ensure reliable delivery.

The Switch also supports the RADIUS protocol for authentication using the Access Authentication Control commands. RADIUS or Remote Authentication Dial In User Server also uses a remote server for authentication and can be responsible for receiving user connection requests, authenticating the user and returning all configuration information necessary for the client to deliver service through the user. RADIUS may be facilitated on this Switch using the commands listed in this section.

In order for the TACACS / XTACACS / TACACS+ / RADIUS security function to work properly, a TACACS / XTACACS / TACACS+ / RADIUS server must be configured on a device other than the Switch, called a **server host** and it must include usernames and passwords for authentication. When the user is prompted by the Switch to enter usernames and passwords for authentication, the Switch contacts the TACACS / XTACACS / TACACS+ / RADIUS server to verify, and the server will respond with one of three messages:

A) The server verifies the username and password, and the user is granted normal user privileges on the Switch.

B) The server will not accept the username and password and the user is denied access to the Switch.

C) The server doesn’t respond to the verification query. At this point, the Switch receives the timeout from the server and then moves to the next method of verification configured in the method list.

The Switch has four built-in **server groups**, one for each of the TACACS, XTACACS, TACACS+ and RADIUS protocols. These built-in **server groups** are used to authenticate users trying to access the Switch. The users will set **server hosts** in a preferable order in the built-in **server group** and when a user tries to gain access to the Switch, the Switch will ask the first **server host** for authentication. If no authentication is made, the second **server host** in the list will be queried, and so on. The built-in **server group** can only have hosts that are running the specified protocol. For example, the TACACS **server group** can only have TACACS **server hosts**.

The administrator for the Switch may set up five different authentication techniques per user-defined **method list** (TACACS / XTACACS / TACACS+ / RADIUS / local / none) for authentication. These techniques will be listed in an order preferable, and defined by the user for normal user authentication on the Switch, and may contain up to eight authentication techniques. When a user attempts to access the Switch, the Switch will select the first technique listed for authentication. If the first technique goes through its **server hosts** and no authentication is returned, the Switch will then go to the next technique listed in the server group for authentication, until the authentication has been verified or denied, or the list is exhausted.

Please note that user granted access to the Switch will be granted normal user privileges on the Switch. To gain access to admin level privileges, the user must enter the **enable admin** command and then enter a password, which was previously configured by the administrator of the Switch.

**NOTE:** TACACS, XTACACS and TACACS+ are separate entities and are not compatible. The Switch and the server must be configured exactly the same, using the same protocol. (For example, if the Switch is set up for TACACS authentication, so must be the host server.)

The Access Authentication Control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.
<table>
<thead>
<tr>

</tbody>
</table>

Each command is listed, in detail, in the following sections.
**enable authen_policy**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable system access authentication policy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable authen_policy</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will enable an administrator-defined authentication policy for users trying to access the Switch. When enabled, the device will check the method list and choose a technique for user authentication upon login.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable the system access authentication policy:

```
DES-3028P:4#enable authen_policy
Command: enable authen_policy
Success.
DES-3028P:4#
```

**disable authen_policy**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable system access authentication policy.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable authen_policy</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will disable the administrator-defined authentication policy for users trying to access the Switch. When disabled, the Switch will access the local user account database for username and password verification. In addition, the Switch will now accept the local enable password as the authentication for normal users attempting to access administrator level privileges.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable the system access authentication policy:

```
DES-3028P:4#disable authen_policy
Command: disable authen_policy
Success.
DES-3028P:4#
```

**show authen_policy**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the system access authentication policy status on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show authen_policy</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will show the current status of the access authentication policy on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
</tbody>
</table>

### show authen_policy

Restrictions: None.

Example usage:

To display the system access authentication policy:

```
DES-3028P:4#show authen_policy
Command: show authen_policy

Authentication Policy: Enabled

DES-3028P:4#
```

### create authen_login method_list_name

**Purpose**: Used to create a user defined method list of authentication methods for users logging on to the Switch.

**Syntax**: `create authen_login method_list_name <string 15>`

**Description**: This command is used to create a list for authentication techniques for user login. The Switch can support up to eight method lists, but one is reserved as a default and cannot be deleted. Multiple method lists must be created and configured separately.

**Parameters**:
- `<string 15>` – Enter an alphanumeric string of up to 15 characters to define the given method list.

**Restrictions**: Only Administrator-level users can issue this command.

Example usage:

To create the method list “Trinity.”:

```
DES-3028P:4#create authen_login method_list_name Trinity
Command: create authen_login method_list_name Trinity
Success.

DES-3028P:4#
```

### config authen_login

**Purpose**: Used to configure a user-defined or default method list of authentication methods for user login.

**Syntax**: `config authen_login [default | method_list_name <string 15>] method {tacacs | xtacacs | tacacs+ | radius | server_group <string 15> | local | none}`

**Description**: This command will configure a user-defined or default method list of authentication methods for users logging on to the Switch. The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like `tacacs – xtacacs – local`, the Switch will send an authentication request to the first `tacacs` host in the server group. If no response comes from the server host, the Switch will send an authentication request to the second `tacacs` host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the
**config authen_login**

same sequence with the following protocol listed, `xtacacs`. If no authentication takes place using the `xtacacs` list, the local account database set in the Switch is used to authenticate the user. When the local method is used, the privilege level will be dependant on the local account privilege configured on the Switch.

Successful login using any of these methods will give the user a “user” privilege only. If the user wishes to upgrade his or her status to the administrator level, the user must implement the `enable admin` command, followed by a previously configured password. (See the `enable admin` part of this section for more detailed information, concerning the `enable admin` command.)

**Parameters**

- `default` – The default method list for access authentication, as defined by the user. The user may choose one or a combination of up to four (4) of the following authentication methods:
  - `tacacs` – Adding this parameter will require the user to be authenticated using the TACACS protocol from the remote TACACS server hosts of the TACACS server group list.
  - `xtacacs` – Adding this parameter will require the user to be authenticated using the XTACACS protocol from the remote XTACACS server hosts of the XTACACS server group list.
  - `tacacs+` – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from the remote TACACS+ server hosts of the TACACS+ server group list.
  - `radius` – Adding this parameter will require the user to be authenticated using the RADIUS protocol from the remote RADIUS server hosts of the RADIUS server group list.
  - `server_group <string 15>` – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
  - `local` – Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
  - `none` – Adding this parameter will require no authentication to access the Switch.

- `method_list_name` – Enter a previously implemented method list name defined by the user. The user may add one, or a combination of up to four (4) of the following authentication methods to this method list:
  - `tacacs` – Adding this parameter will require the user to be authenticated using the TACACS protocol from a remote TACACS server.
  - `xtacacs` – Adding this parameter will require the user to be authenticated using the XTACACS protocol from a remote XTACACS server.
  - `tacacs+` – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from a remote TACACS+ server.
  - `radius` – Adding this parameter will require the user to be authenticated using the RADIUS protocol from a remote RADIUS server.
  - `server_group <string 15>` – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
  - `local` – Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
  - `none` – Adding this parameter will require no authentication to access the Switch.
**config authen_login**

**NOTE:** Entering *none* or *local* as an authentication protocol will override any other authentication that follows it on a method list or on the default method list.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To configure the user defined method list “Trinity” with authentication methods TACACS, XTACACS and local, in that order:

```
DES-3028P:4#config authen_login method_list_name Trinity method tacacs xtacacs local
Command: config authen_login method_list_name Trinity method tacacs xtacacs local
Success.
DES-3028P:4#
```

Example usage:

To configure the default method list with authentication methods XTACACS, TACACS+ and local, in that order:

```
DES-3028P:4#config authen_login default method xtacacs tacacs+ local
Command: config authen_login default method xtacacs tacacs+ local
Success.
DES-3028P:4#
```

**delete authen_login method_list_name**

Purpose Used to delete a previously configured user defined method list of authentication methods for users logging on to the Switch.

Syntax `delete authen_login method_list_name <string 15>`

Description This command is used to delete a list for authentication methods for user login.

Parameters `<string 15>` – Enter an alphanumeric string of up to 15 characters to define the given *method list* to delete.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To delete the method list name “Trinity”:

```
DES-3028P:4#delete authen_login method_list_name Trinity
Command: delete authen_login method_list_name Trinity
Success.
DES-3028P:4#
```
### show authen_login

**Purpose**
Used to display a previously configured user defined method list of authentication methods for users logging on to the Switch.

**Syntax**
```
show authen_login [default | method_list_name <string 15> | all]
```

**Description**
This command is used to show a list of authentication methods for user login.

**Parameters**
- `default` – Entering this parameter will display the default method list for users logging on to the Switch.
- `method_list_name <string 15>` – Enter an alphanumeric string of up to 15 characters to define the given method list to view.
- `all` – Entering this parameter will display all the authentication login methods currently configured on the Switch.

The window will display the following parameters:
- **Method List Name** – The name of a previously configured method list name.
- **Priority** – Defines which order the method list protocols will be queried for authentication when a user attempts to log on to the Switch. Priority ranges from 1 (highest) to 4 (lowest).
- **Method Name** – Defines which security protocols are implemented, per method list name.
- **Comment** – Defines the type of Method. User-defined Group refers to server group defined by the user. Built-in Group refers to the TACACS, XTACACS, TACACS+, and RADIUS security protocols which are permanently set in the Switch. Keyword refers to authentication using a technique INSTEAD of TACACS / XTACACS / TACACS+ / RADIUS which are local (authentication through the user account on the Switch) and none (no authentication necessary to access any function on the Switch).

**Restrictions**
None.

**Example usage:**

To view the authentication login method list named Trinity:

```
DES-3028P:4#show authen_login method_list_name Trinity
Command: show authen_login method_list_name Trinity

<table>
<thead>
<tr>
<th>Method List Name</th>
<th>Priority</th>
<th>Method Name</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Trinity</td>
<td>1</td>
<td>tacacs+</td>
<td>Built-in Group</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>tacacs</td>
<td>Built-in Group</td>
</tr>
<tr>
<td></td>
<td>3</td>
<td>Darren</td>
<td>User-defined Group</td>
</tr>
<tr>
<td></td>
<td>4</td>
<td>local</td>
<td>Keyword</td>
</tr>
</tbody>
</table>

DES-3028P:4#
```

### create authen_enable method_list_name

**Purpose**
Used to create a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

**Syntax**
```
create authen_enable method_list_name <string 15>
```

**Description**
This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch.
create authen_enable method_list_name

Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight (8) enable method lists can be implemented on the Switch.

Parameters

<string 15> – Enter an alphanumeric string of up to 15 characters to define the given enable method list to create.

Restrictions

Only Administrator-level users can issue this command.

Example usage:

To create a user-defined method list, named “Permit” for promoting user privileges to Administrator privileges:

```
DES-3028P:4#create authen_enable method_list_name Permit
Command: create authen_enable method_list_name Permit
Success.
DES-3028P:4#
```

config authen_enable

Purpose

Used to configure a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

Syntax

```
config authen_enable [default | method_list_name <string 15>] method {tacacs | xtacacs | tacacs+ | radius | server_group <string 15> | local_enable | none}
```

Description

This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight (8) enable method lists can be implemented simultaneously on the Switch.

The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like tacacs – xtacacs – local_enable, the Switch will send an authentication request to the first TACACS host in the server group. If no verification is found, the Switch will send an authentication request to the second TACACS host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the same sequence with the following protocol listed, xtacacs. If no authentication takes place using the xtacacs list, the local_enable password set in the Switch is used to authenticate the user.

Successful authentication using any of these methods will give the user an “Admin” level privilege.

Parameters

default – The default method list for administration rights authentication, as defined by the user. The user may choose one or a combination of up to four (4) of the following authentication methods:

- tacacs – Adding this parameter will require the user to be authenticated using the TACACS protocol from the remote TACACS server hosts of the TACACS server group list.
**config authen_enable**

- `xtacacs` – Adding this parameter will require the user to be authenticated using the XTACACS protocol from the remote XTACACS server hosts of the XTACACS server group list.

- `tacacs+` – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from the remote TACACS+ server hosts of the TACACS+ server group list.

- `radius` – Adding this parameter will require the user to be authenticated using the RADIUS protocol from the remote RADIUS server hosts of the RADIUS server group list.

- `server_group <string 15>` – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.

- `local_enable` – Adding this parameter will require the user to be authenticated using the local user account database on the Switch.

- `none` – Adding this parameter will require no authentication to access the Switch.

`method_list_name` – Enter a previously implemented method list name defined by the user (`create authen_enable`). The user may add one, or a combination of up to four (4) of the following authentication methods to this method list:

- `tacacs` – Adding this parameter will require the user to be authenticated using the TACACS protocol from a remote TACACS server.

- `xtacacs` – Adding this parameter will require the user to be authenticated using the XTACACS protocol from a remote XTACACS server.

- `tacacs+` – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from a remote TACACS+ server.

- `radius` – Adding this parameter will require the user to be authenticated using the RADIUS protocol from a remote RADIUS server.

- `server_group <string 15>` – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.

- `local_enable` – Adding this parameter will require the user to be authenticated using the local user account database on the Switch. The local enable password of the device can be configured using the `config admin local_password` command.

- `none` – Adding this parameter will require no authentication to access the administration level privileges on the Switch.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To configure the user defined method list “Permit” with authentication methods TACACS, XTACACS and local, in that order.

```
DES-3028P:4#config authen_enable method_list_name Trinity method tacacs xtacacs local
Command: config authen_enable method_list_name Trinity method tacacs xtacacs local
Success.
```
Example usage:
To configure the default method list with authentication methods XTACACS, TACACS+ and local, in that order:

```
DES-3028P:4#config authen_enable default method xtacacs tacacs+ local
Command: config authen_enable default method xtacacs tacacs+ local
Success.
```

### delete authen_enable method_list_name

**Purpose**
Used to delete a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

**Syntax**
```
delete authen_enable method_list_name <string 15>
```

**Description**
This command is used to delete a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges.

**Parameters**
- `<string 15>` – Enter an alphanumeric string of up to 15 characters to define the given `enable method list` to delete.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To delete the user-defined method list “Permit”

```
DES-3028P:4#delete authen_enable method_list_name Permit
Command: delete authen_enable method_list_name Permit
Success.
```

### show authen_enable

**Purpose**
Used to display the method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

**Syntax**
```
show authen_enable [default | method_list_name <string 15> | all]
```

**Description**
This command is used to display a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges.

**Parameters**
- `default` – Entering this parameter will display the default method list for users attempting to gain access to Administrator level privileges on the Switch.
- `method_list_name <string 15>` – Enter an alphanumeric string of up to 15 characters to define the given `method list` the user wishes to view.
- `all` – Entering this parameter will display all the authentication login methods currently configured on the Switch.

The window will display the following parameters:
- Method List Name – The name of a previously configured method list name.
**show authen_enable**

- **Priority** – Defines which order the method list protocols will be queried for authentication when a user attempts to log on to the Switch. Priority ranges from 1 (highest) to 4 (lowest).
- **Method Name** – Defines which security protocols are implemented, per method list name.
- **Comment** – Defines the type of Method. *User-defined Group* refers to server groups defined by the user. *Built-in Group* refers to the TACACS, XTACACS, TACACS+ and RADIUS security protocols which are permanently set in the Switch. *Keyword* refers to authentication using a technique INSTEAD of TACACS/XTACACS/TACACS+/RADIUS which are local (authentication through the **local_enable** password on the Switch) and none (no authentication necessary to access any function on the Switch).

**Restrictions**

None.

**Example usage:**

To display all method lists for promoting user level privileges to administrator level privileges.

```
DES-3028P:4#show authen_enable all
Command: show authen_enable all

<table>
<thead>
<tr>
<th>Method List Name</th>

DES-3028P:4#
```

**config authen application**

**Purpose**

Used to configure various applications on the Switch for authentication using a previously configured method list.

**Syntax**

```
config authen application [console | telnet | ssh | http | all] [login | enable] [default | method_list_name <string 15>]
```

**Description**

This command is used to configure Switch configuration applications (console, telnet, ssh, web) for login at the user level and at the administration level (**authen_enable**) utilizing a previously configured method list.

**Parameters**

- **application** – Choose the application to configure. The user may choose one of the following five options to configure:
  - **console** – Choose this parameter to configure the command line interface login method.
  - **telnet** – Choose this parameter to configure the telnet login method.
  - **ssh** – Choose this parameter to configure the Secure
**config authen application**

Shell login method.
- `http` – Choose this parameter to configure the web interface login method.
- `all` – Choose this parameter to configure all applications (console, telnet, ssh, web) login method.

`login` – Use this parameter to configure an application for normal login on the user level, using a previously configured method list.

`enable` – Use this parameter to configure an application for upgrading a normal user level to administrator privileges, using a previously configured method list.

`default` – Use this parameter to configure an application for user authentication using the default method list.

`method_list_name <string 15>` – Use this parameter to configure an application for user authentication using a previously configured method list. Enter an alphanumeric string of up to 15 characters to define a previously configured method list.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To configure the default method list for the web interface:

```
DES-3028P:4#config authen application http login default
Command: config authen application http login default
Success.
DES-3028P:4#
```

**show authen application**

Purpose Used to display authentication methods for the various applications on the Switch.

Syntax `show authen application`

Description This command will display all of the authentication method lists (login, enable administrator privileges) for Switch configuration applications (console, telnet, SSH, web) currently configured on the Switch.

Parameters None.

Restrictions None.

Example usage:
To display the login and enable method list for all applications on the Switch:

```
DES-3028P:4#show authen application
Command: show authen application

<table>
<thead>
<tr>
<th>Application</th>
<th>Login Method List</th>
<th>Enable Method List</th>
</tr>
</thead>
<tbody>
<tr>
<td>Console</td>
<td>default</td>
<td>default</td>
</tr>
<tr>
<td>Telnet</td>
<td>Trinity</td>
<td>default</td>
</tr>
<tr>
<td>SSH</td>
<td>default</td>
<td>default</td>
</tr>
</tbody>
</table>
```
create authen server_host

Purpose
Used to create an authentication server host.

Syntax
create authen server_host <ipaddr> protocol [tacacs | xtacacs | tacacs+ | radius] (port <int 1-65535> | key [<key_string 254> | none] | timeout <int 1-255> | retransmit < 1-255>)

Description
This command will create an authentication server host for the TACACS/XTACACS/TACACS+/RADIUS security protocols on the Switch. When a user attempts to access the Switch with authentication protocol enabled, the Switch will send authentication packets to a remote TACACS/XTACACS/TACACS+/RADIUS server host on a remote host. The TACACS/XTACACS/TACACS+/RADIUS server host will then verify or deny the request and return the appropriate message to the Switch. More than one authentication protocol can be run on the same physical server host but, remember that TACACS/XTACACS/TACACS+/RADIUS are separate entities and are not compatible with each other. The maximum supported number of server hosts is 16.

Parameters

- server_host <ipaddr> – The IP address of the remote server host to add.
- protocol – The protocol used by the server host. The user may choose one of the following:
  - tacacs – Enter this parameter if the server host utilizes the TACACS protocol.
  - xtacacs – Enter this parameter if the server host utilizes the XTACACS protocol.
  - tacacs+ – Enter this parameter if the server host utilizes the TACACS+ protocol.
  - radius – Enter this parameter if the server host utilizes the RADIUS protocol.
- port <int 1-65535> – Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS/XTACACS/TACACS+ servers and 1812 and 1813 for RADIUS servers but the user may set a unique port number for higher security.
- key <key_string 254> – Authentication key to be shared with a configured TACACS+ or RADIUS server only. Specify an alphanumeric string up to 254 characters.
- timeout <int 1-255> – Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.
- retransmit <int 1-255> – Enter the value in the retransmit field to change how many times the device will resend an authentication request when the server does not respond.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To create a TACACS+ authentication server host, with port number 1234, a timeout value of 10 seconds and a retransmit count of 5.

```
DES-3028P:4# create authen server_host 10.1.1.121 protocol tacacs+ port 1234 timeout 10 retransmit 5
Command: create authen server_host 10.1.1.121 protocol tacacs+ port 1234 timeout 10 retransmit 5
```
### config authen server_host

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure a user-defined authentication server host.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>```config authen server_host &lt;ipaddr&gt; protocol [tacacs</td>
</tr>
<tr>
<td>Description</td>
<td>This command will configure a user-defined authentication server host for the TACACS/XTACACS/TACACS+/RADIUS security protocols on the Switch. When a user attempts to access the Switch with the authentication protocol enabled, the Switch will send authentication packets to a remote TACACS/XTACACS/TACACS+/RADIUS server host on a remote host. The TACACS/XTACACS/TACACS+/RADIUS server host will then verify or deny the request and return the appropriate message to the Switch. More than one authentication protocol can be run on the same physical server host but, remember that TACACS/XTACACS/TACACS+/RADIUS are separate entities and are not compatible with each other. The maximum supported number of server hosts is 16.</td>
</tr>
</tbody>
</table>
| Parameters | server_host `<ipaddr>` – The IP address of the remote server host the user wishes to alter. protocol – The protocol used by the server host. The user may choose one of the following:  
  - tacacs – Enter this parameter if the server host utilizes the TACACS protocol.  
  - xtacacs – Enter this parameter if the server host utilizes the XTACACS protocol.  
  - tacacs+ – Enter this parameter if the server host utilizes the TACACS+ protocol.  
  - radius – Enter this parameter if the server host utilizes the RADIUS protocol.  
  port `<int 1-65535>` – Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS/XTACACS/TACACS+ servers and 1812 and 1813 for RADIUS servers but the user may set a unique port number for higher security.  
  key `<key_string 254>` – Authentication key to be shared with a configured TACACS+ or RADIUS server only. Specify an alphanumeric string up to 254 characters or choose none.  
  timeout `<int 1-255>` – Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.  
  retransmit `<int 1-255>` – Enter the value in the retransmit field to change how many times the device will resend an authentication request when the server does not respond. This field is inoperable for the TACACS+ protocol. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To configure a TACACS+ authentication server host, with port number 4321, a timeout value of 12 seconds and a retransmit count of 4.
### delete authen server_host

**Purpose**
Used to delete a user-defined authentication server host.

**Syntax**
```
delete authen server_host <ipaddr> protocol [tacacs | xtacacs | tacacs+ | radius]
```

**Description**
This command is used to delete a user-defined authentication server host previously created on the Switch.

**Parameters**
- `server_host <ipaddr>` – The IP address of the remote server host to be deleted.
- `protocol` – The protocol used by the server host the user wishes to delete. The user may choose one of the following:
  - `tacacs` – Enter this parameter if the server host utilizes the TACACS protocol.
  - `xtacacs` – Enter this parameter if the server host utilizes the XTACACS protocol.
  - `tacacs+` – Enter this parameter if the server host utilizes the TACACS+ protocol.
  - `radius` – Enter this parameter if the server host utilizes the RADIUS protocol.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To delete a user-defined TACACS+ authentication server host:

```
DES-3028P:4#delete authen server_host 10.1.1.121 protocol tacacs+
Command: delete authen server_host 10.1.1.121 protocol tacacs+
Success.
```

### show authen server_host

**Purpose**
Used to view a user-defined authentication server host.

**Syntax**
```
show authen server_host
```

**Description**
This command is used to view user-defined authentication server hosts previously created on the Switch.

The following parameters are displayed:
- `IP Address` – The IP address of the authentication server host.
- `Protocol` – The protocol used by the server host. Possible results will include TACACS, XTACACS, TACACS+ or RADIUS.
- `Port` – The virtual port number on the server host. The default value is 49.
show authen server_host

49.

Timeout – The time in seconds the Switch will wait for the server host to reply to an authentication request.

Retransmit – The value in the retransmit field denotes how many times the device will resend an authentication request when the TACACS server does not respond. This field is inoperable for the tacacs+ protocol.

Key – Authentication key to be shared with a configured TACACS+ server only.

Parameters None.
Restrictions None.

Example usage:

To view authentication server hosts currently set on the Switch:

```
DES-3028P:4#show authen server_host
Command: show authen server_host
IP Address    Protocol    Port  Timeout  Retransmit  Key
------------- --------     ----- -------  ----------  -------------
10.53.13.94    TACACS       49     5         2       No Use
Total Entries : 1
DES-3028P:4#
```

create authen server_group

Purpose Used to create a user-defined authentication server group.

Syntax `create authen server_group <string 15>`

Description This command will create an authentication server group. A server group is a technique used to group TACACS/XTACACS/TACACS+/RADIUS server hosts into user defined categories for authentication using method lists. The user may add up to eight (8) authentication server hosts to this group using the `config authen server_group` command.

Parameters `<string 15>` – Enter an alphanumeric string of up to 15 characters to define the newly created server group.

Restrictions Only Administrator-level users can issue this command.

Example usage:

To create the server group “group_1”:

```
DES-3028P:4#create authen server_group group_1
Command: create authen server_group group_1
Success.
DES-3028P:4#
```
config authen server_group

Purpose
Used to configure a user-defined authentication server group.

Syntax
`config authen server_group [tacacs | xtacacs | tacacs+ | radius | <string 15>] [add | delete] server_host <ipaddr> protocol [tacacs | xtacacs | tacacs+ | radius]

Description
This command will configure an authentication server group. A server group is a technique used to group TACACS/XTACACS/TACACS+/RADIUS server hosts into user defined categories for authentication using method lists. The user may define the type of server group by protocol or by previously defined server group. Up to eight authentication server hosts may be added to any particular group.

Parameters

- server_group – The user may define the group by protocol groups built into the Switch (TACACS/XTACACS/TACACS+/RADIUS), or by a user-defined group previously created using the `create authen server_group` command.

  - tacacs – Use this parameter to utilize the built-in TACACS server protocol on the Switch. Only server hosts utilizing the TACACS protocol may be added to this group.

  - xtacacs – Use this parameter to utilize the built-in XTACACS server protocol on the Switch. Only server hosts utilizing the XTACACS protocol may be added to this group.

  - tacacs+ – Use this parameter to utilize the built-in TACACS+ server protocol on the Switch. Only server hosts utilizing the TACACS+ protocol may be added to this group.

  - radius – Use this parameter to utilize the built-in RADIUS server protocol on the Switch. Only server hosts utilizing the RADIUS protocol may be added to this group.

  - <string 15> – Enter an alphanumeric string of up to 15 characters to define the previously created server group. This group may add any combination of server hosts to it, regardless of protocol.

- add/delete – Enter the correct parameter to add or delete a server host from a server group.

- server_host <ipaddr> – Enter the IP address of the previously configured server host to add or delete.

- protocol – Enter the protocol utilized by the server host. There are three options:

  - tacacs – Use this parameter to define the protocol if the server host is using the TACACS authentication protocol.

  - xtacacs – Use this parameter to define the protocol if the server host is using the XTACACS authentication protocol.

  - tacacs+ – Use this parameter to define the protocol if the server host is using the TACACS+ authentication protocol.

  - radius – Use this parameter to define the protocol if the server host is using the RADIUS authentication protocol.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To add an authentication host to server group “group_1”:

```
DES-3028P:4# config authen server_group group_1 add server_host 10.1.1.121 protocol tacacs+
Command: config authen server_group group_1 add server_host 10.1.1.121 protocol tacacs+
Success.
```
### delete authen server_group

**Purpose**
Used to delete a user-defined authentication server group.

**Syntax**
```
delete authen server_group <string 15>
```

**Description**
This command will delete an authentication server group.

**Parameters**
```
<string 15> – Enter an alphanumeric string of up to 15 characters to define the previously created server group to be deleted.
```

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To delete the server group “group_1”:

```
DES-3028P:4#delete server_group group_1
Command: delete server_group group_1
Success.
DES-3028P:4#
```  

### show authen server_group

**Purpose**
Used to view authentication server groups on the Switch.

**Syntax**
```
show authen server_group <string 15>
```

**Description**
This command will display authentication server groups currently configured on the Switch.

This command will display the following fields:
- **Group Name** – The name of the server group currently configured on the Switch, including built in groups and user defined groups.
- **IP Address** – The IP address of the server host.
- **Protocol** – The authentication protocol used by the server host.

**Parameters**
```
<string 15> – Enter an alphanumeric string of up to 15 characters to define the previously created server group to be viewed.
```

Entering this command without the `<string>` parameter will display all authentication server groups on the Switch.

**Restrictions**
None.

**Example usage:**
To view authentication server groups currently set on the Switch.
DES-3028P:4#show authen server_group
Command: show authen server_group

<table>
<thead>
<tr>
<th>Group Name</th>
<th>IP Address</th>
<th>Protocol</th>
</tr>
</thead>
<tbody>
<tr>
<td>radius</td>
<td></td>
<td></td>
</tr>
<tr>
<td>tacacs</td>
<td></td>
<td></td>
</tr>
<tr>

</table>

Total Entries : 4

DES-3028P:4#

**config authen parameter response_timeout**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the amount of time the Switch will wait for a user to enter authentication before timing out.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config authen parameter response_timeout &lt;int 0-255&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will set the time the Switch will wait for a response of authentication from the user.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>response_timeout &lt;int 0-255&gt;</code> – Set the time, in seconds, the Switch will wait for a response of authentication from the user attempting to log in from the command line interface or telnet interface. 0 means there won’t be a time-out. The default value is 30 seconds.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure the response timeout for 60 seconds:

DES-3028P:4#config authen parameter response_timeout 60
Command: `config authen parameter response_timeout 60`
Success.

DES-3028P:4#

**config authen parameter attempt**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the maximum number of times the Switch will accept authentication attempts.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config authen parameter attempt &lt;int 1-255&gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command will configure the maximum number of times the Switch will accept authentication attempts. Users failing to be authenticated after the set amount of attempts will be denied access to the Switch and will be locked out of further authentication attempts. Command line interface users will have to wait 60 seconds before another authentication attempt. Telnet users will be disconnected from the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>parameter attempt &lt;int 1-255&gt;</code> – Set the maximum number of attempts the user may try to become authenticated by the Switch, before being locked out.</td>
</tr>
</tbody>
</table>
**config authen parameter attempt**

| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To set the maximum number of authentication attempts at 5:

```
DES-3028P:4#config authen parameter attempt 5
Command: config authen parameter attempt 5
Success.
```

**show authen parameter**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the authentication parameters currently configured on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>show authen parameter</strong></td>
</tr>
</tbody>
</table>
| Description | This command will display the authentication parameters currently configured on the Switch, including the response timeout and user authentication attempts.  
This command will display the following fields:  
Response timeout – The configured time allotted for the Switch to wait for a response of authentication from the user attempting to log in from the command line interface or telnet interface.  
User attempts – The maximum number of attempts the user may try to become authenticated by the Switch, before being locked out. |
| Parameters | None. |
| Restrictions | None. |

Example usage:

To view the authentication parameters currently set on the Switch:

```
DES-3028P:4#show authen parameter
Command: show authen parameter
Response Timeout : 60 seconds
User Attempts : 5
```

**enable admin**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to promote user level privileges to administrator level privileges.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>enable admin</strong></td>
</tr>
</tbody>
</table>
| Description | This command is for users who have logged on to the Switch on the normal user level, to become promoted to the administrator level.  
After logging on to the Switch users will have only user level privileges. To gain access to administrator level privileges, the user will enter this command and will have to enter an authentication password. Possible authentication methods for this function include TACACS, XTACACS, TACACS+, RADIUS, user defined server groups, local enable (local account on the Switch), or no |
### enable admin

**authentication (none).** Because XTACACS and TACACS do not support the enable function, the user must create a special account on the server host which has the username "enable", and a password configured by the administrator that will support the "enable" function. This function becomes inoperable when the authentication policy is disabled.

**Parameters**
- None.

**Restrictions**
- None.

**Example usage:**

To enable administrator privileges on the Switch:

```
DES-3028P:4#enable admin
Password: ******
DES-3028P:4#
```

### config admin local_enable

**Purpose**
- Used to configure the local enable password for administrator level privileges.

**Syntax**
- `config admin local_enable`

**Description**
- This command will configure the locally enabled password for the `enable admin` command. When a user chooses the "local_enable" method to promote user level privileges to administrator privileges, he or she will be prompted to enter the password configured here that is set locally on the Switch.

**Parameters**
- `<password 15>` – After entering this command, the user will be prompted to enter the old password, then a new password in an alphanumeric string of no more than 15 characters, and finally prompted to enter the new password again for confirmation. See the example below.

**Restrictions**
- Only Administrator-level users can issue this command.

**Example usage:**

To configure the password for the “local_enable” authentication method.

```
DES-3028P:4#config admin local_enable
Command: config admin local_enable

Enter the old password:
Enter the case-sensitive new password:******
Enter the new password again for confirmation:******
Success.

DES-3028P:4#
```
SSH COMMANDS

The steps required to use the Secure Shell (SSH) protocol for secure communication between a remote PC (the SSH Client) and the Switch (the SSH Server), are as follows:

Create a user account with admin-level access using the `create account admin <username> <password>` command. This is identical to creating any other admin-level user account on the Switch, including specifying a password. This password is used to login to the Switch, once secure communication has been established using the SSH protocol.

Configure the user account to use a specified authorization method to identify users that are allowed to establish SSH connections with the Switch using the `config ssh authmode` command. There are three choices as to the method SSH will use to authorize the user, and they are password, publickey and hostbased.

Configure the encryption algorithm that SSH will use to encrypt and decrypt messages sent between the SSH Client and the SSH Server.

Finally, enable SSH on the Switch using the `enable ssh` command.

After following the above steps, users can configure an SSH Client on the remote PC and manage the Switch using secure, in-band communication.

The Secure Shell (SSH) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable ssh</td>
<td></td>
</tr>
<tr>
<td>disable ssh</td>
<td></td>
</tr>
<tr>
<td>config ssh authmode</td>
<td>[password</td>
</tr>
<tr>
<td>show ssh authmode</td>
<td></td>
</tr>
<tr>
<td>config ssh server</td>
<td>{maxsession &lt;int 1-8&gt;</td>
</tr>
<tr>
<td>show ssh server</td>
<td></td>
</tr>
<tr>
<td>config ssh user</td>
<td>&lt;username 15&gt; authmode [hostbased [hostname &lt;domain_name 32&gt;</td>
</tr>
<tr>
<td>show ssh user authmode</td>
<td></td>
</tr>
<tr>
<td>config ssh algorithm</td>
<td>[3DES</td>
</tr>
<tr>
<td>show ssh algorithm</td>
<td></td>
</tr>
<tr>
<td>config ssh regenerate hostkey</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.
enable ssh

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable SSH.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable ssh</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command allows users to enable SSH on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Usage example:
To enable SSH:

```
DES-3028P:4#enable ssh
Command: enable ssh
Success.
DES-3028P:4#
```

disable ssh

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable SSH.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>disable ssh</code></td>
</tr>
<tr>
<td>Description</td>
<td>This command allows users to disable SSH on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Usage example:
To disable SSH:

```
DES-3028P:4# disable ssh
Command: disable ssh
Success.
DES-3028P:4#
```

config ssh authmode

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the SSH authentication mode setting.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config ssh authmode [password</td>
</tr>
<tr>
<td>Description</td>
<td>This command will allow users to configure the SSH authentication mode for users attempting to access the Switch.</td>
</tr>
</tbody>
</table>
### config ssh authmode

**Parameters**
- **password** – This parameter may be chosen if the administrator wishes to use a locally configured password for authentication on the Switch.
- **publickey** – This parameter may be chosen if the administrator wishes to use a publickey configuration set on a SSH server, for authentication.
- **hostbased** – This parameter may be chosen if the administrator wishes to use a host computer for authentication. This parameter is intended for Linux users requiring SSH authentication techniques and the host computer is running the Linux operating system with a SSH program previously installed.
- **[enable | disable]** – This allows users to enable or disable SSH authentication on the Switch.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To enable the SSH authentication mode by password:

```
DES-3028P:4# config ssh authmode password enable
Command: config ssh authmode password enable
Success.
DES-3028P:4#
```

### show ssh authmode

**Purpose**
Used to display the SSH authentication mode setting.

**Syntax**
```
show ssh authmode
```

**Description**
This command will allow users to display the current SSH authentication set on the Switch.

**Parameters**
None.

**Restrictions**
None.

Example usage:

To view the current authentication mode set on the Switch:

```
DES-3028P:4# show ssh authmode
Command: show ssh authmode

The SSH authmode:
Password : Enabled
Publickey : Enabled
Hostbased : Enabled

DES-3028P:4#
```

### config ssh server

**Purpose**
Used to configure the SSH server.

**Syntax**
```
config ssh server {maxsession <int 1-8> | timeout <sec 120-600> | authfail <int 2-20> | rekey [10min | 30min | 60min | never]}
```
**config ssh server**

<table>
<thead>
<tr>
<th>Description</th>
<th>This command allows users to configure the SSH server.</th>
</tr>
</thead>
</table>
| Parameters  | **maxsession** <int 1-8> – Allows the user to set the number of users that may simultaneously access the Switch. The default setting is 8.  
**contimeout** <sec 120-600> – Allows the user to set the connection timeout. The user may set a time between 120 and 600 seconds. The default is 120 seconds.  
**authfail** <int 2-20> – Allows the administrator to set the maximum number of attempts that a user may try to logon utilizing SSH authentication. After the maximum number of attempts is exceeded, the Switch will be disconnected and the user must reconnect to the Switch to attempt another login.  
**rekey** [10min | 30min | 60min | never] – Sets the time period that the Switch will change the security shell encryptions. |
| Restrictions| Only Administrator-level users can issue this command. |

Usage example:

To configure the SSH server:

```
DES-3028P:4# config ssh server maxsession 2 contimeout 300 authfail 2
Command: config ssh server maxsession 2 contimeout 300 authfail 2
Success.
DES-3028P:4#
```

**show ssh server**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the SSH server setting.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><strong>show ssh server</strong></td>
</tr>
<tr>
<td>Description</td>
<td>This command allows users to display the current SSH server setting.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Usage example:

To display the SSH server:

```
DES-3028P:4# show ssh server
Command: show ssh server

The SSH server configuration
max Session : 8
Connection timeout : 300
Authfail attempts : 2
Rekey timeout : never
port : 22

DES-3028P:4#
```
### config ssh user

**Purpose**
Used to configure the SSH user.

**Syntax**
```
config ssh user <username 15> authmode [hostbased [hostname <domain_name 32>] [hostname_IP <domain_name 32> <ipaddr>] | password | publickey]
```

**Description**
This command allows users to configure the SSH user authentication method.

**Parameters**
- `<username 15>` – Enter a username of no more than 15 characters to identify the SSH user.
- `authmode` – Specifies the authentication mode of the SSH user wishing to log on to the Switch. The administrator may choose between:
  - `hostbased` – This parameter should be chosen if the user wishes to use a remote SSH server for authentication purposes. Choosing this parameter requires the user to input the following information to identify the SSH user:
    - `hostname <domain_name 32>` – Enter an alphanumeric string of up to 32 characters identifying the remote SSH user.
    - `hostname_IP <domain_name 32> <ipaddr>` – Enter the hostname and the corresponding IP address of the SSH user.
  - `password` – This parameter should be chosen to use an administrator defined password for authentication. Upon entry of this command, the Switch will prompt the user for a password, and then to retype the password for confirmation.
  - `publickey` – This parameter should be chosen to use the publickey on a SSH server for authentication.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To configure the SSH user:

```
DES-3028P:4# config ssh user Trinity authmode password
Command: config ssh user Trinity authmode password
Success.
DES-3028P:4#
```

### show ssh user authmode

**Purpose**
Used to display the SSH user setting.

**Syntax**
```
show ssh user authmode
```

**Description**
This command allows users to display the current SSH user setting.

**Parameters**
None.

**Restrictions**
None.

**Example usage:**
To display the SSH user:

```
DES-3028P:4# show ssh user authmode
Command: show ssh user authmode
```

230
Current Accounts:

<table>
<thead>
<tr>
<th>UserName</th>
<th>Authentication</th>
<th>Host Name</th>
<th>Host IP</th>
</tr>
</thead>
<tbody>
<tr>
<td>Trinity</td>
<td>Password</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

DES-3028P:4#

**Note**: To configure the SSH user, the administrator must create a user account on the Switch. For information concerning configuring a user account, please see the section of this manual entitled **Basic Switch Commands** and then the command, `create account`.

### config ssh algorithm

**Purpose**: Used to configure the SSH algorithm.

**Syntax**: `config ssh algorithm [3DES | AES128 | AES192 | AES256 | arcfour | blowfish | cast128 | twofish128 | twofish192 | twofish256 | MD5 | SHA1 | RSA | DSA] [enable | disable]`

**Description**: This command allows users to configure the desired type of SSH algorithm used for authentication encryption.

**Parameters**:
- **3DES**: This parameter will enable or disable the Triple Data Encryption Standard encryption algorithm.
- **AES128**: This parameter will enable or disable the Advanced Encryption Standard AES128 encryption algorithm.
- **AES192**: This parameter will enable or disable the Advanced Encryption Standard AES192 encryption algorithm.
- **AES256**: This parameter will enable or disable the Advanced Encryption Standard AES256 encryption algorithm.
- **arcfour**: This parameter will enable or disable the Arcfour encryption algorithm.
- **blowfish**: This parameter will enable or disable the Blowfish encryption algorithm.
- **cast128**: This parameter will enable or disable the Cast128 encryption algorithm.
- **twofish128**: This parameter will enable or disable the twofish128 encryption algorithm.
- **twofish192**: This parameter will enable or disable the twofish192 encryption algorithm.
- **MD5**: This parameter will enable or disable the MD5 Message Digest encryption algorithm.
- **SHA1**: This parameter will enable or disable the Secure Hash Algorithm encryption.
- **RSA**: This parameter will enable or disable the RSA encryption algorithm.
- **DSA**: This parameter will enable or disable the Digital Signature Algorithm encryption.
- \([enable | disable]\) – This allows the user to enable or disable algorithms entered in this command, on the Switch.

**Restrictions**: Only Administrator-level users can issue this command.

Usage example:

To configure SSH algorithm:
**show ssh algorithm**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the SSH algorithm setting.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show ssh algorithm</td>
</tr>
<tr>
<td>Description</td>
<td>This command will display the current SSH algorithm setting status.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Usage Example:

To display SSH algorithms currently set on the Switch:

```
DES-3028P:4# show ssh algorithm
Command: show ssh algorithm

Encryption Algorithm
3DES               :Enabled
AES128             :Enabled
AES192             :Enabled
AES256             :Enabled
ARC4               :Enabled
Blowfish           :Enabled
Cast128            :Enabled
Twofish128         :Enabled
Twofish192         :Enabled
Twofish256         :Enabled

Data Integrity Algorithm
MD5                :Enabled
SHA1               :Enabled

Public Key Algorithm
RSA                :Enabled
DSA                :Enabled
```

DES-3028P:4#
Secure Sockets Layer or SSL is a security feature that will provide a secure communication path between a host and client through the use of authentication, digital signatures and encryption. These security functions are implemented through the use of a ciphersuite, which is a security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session and consists of three levels:

1. **Key Exchange:** The first part of the ciphersuite string specifies the public key algorithm to be used. This Switch utilizes the Rivest Shamir Adleman (RSA) public key algorithm and the Digital Signature Algorithm (DSA), specified here as the DHE DSS Diffie-Hellman (DHE) public key algorithm. This is the first authentication process between client and host as they “exchange keys” in looking for a match and therefore authentication to be accepted to negotiate encryptions on the following level.

2. **Encryption:** The second part of the ciphersuite that includes the encryption used for encrypting the messages sent between client and host. The Switch supports two types of cryptology algorithms:

   - **Stream Ciphers** – There are two types of stream ciphers on the Switch, RC4 with 40-bit keys and RC4 with 128-bit keys. These keys are used to encrypt messages and need to be consistent between client and host for optimal use.
   - **CBC Block Ciphers** – CBC refers to Cipher Block Chaining, which means that a portion of the previously encrypted block of encrypted text is used in the encryption of the current block. The Switch supports the 3DES_EDE encryption code defined by the Data Encryption Standard (DES) to create the encrypted text.

3. **Hash Algorithm:** This part of the ciphersuite allows the user to choose a message digest function which will determine a Message Authentication Code. This Message Authentication Code will be encrypted with a sent message to provide integrity and prevent against replay attacks. The Switch supports two hash algorithms, MD5 (Message Digest 5) and SHA (Secure Hash Algorithm).

These three parameters are uniquely assembled in four choices on the Switch to create a three layered encryption code for secure communication between the server and the host. The user may implement any one or combination of the ciphersuites available, yet different ciphersuites will affect the security level and the performance of the secured connection. The information included in the ciphersuites is not included with the Switch and requires downloading from a third source in a file form called a certificate. This function of the Switch cannot be executed without the presence and implementation of the certificate file and can be downloaded to the Switch by utilizing a TFTP server. The Switch supports SSLv3 and TLSv1. Other versions of SSL may not be compatible with this Switch and may cause problems upon authentication and transfer of messages from client to host.

Each command is listed, in detail, in the following sections.
### enable ssl

<table>
<thead>
<tr>
<th>Purpose</th>
<th>To enable the SSL function on the Switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`enable ssl {ciphersuite {RSA_with_RC4_128_MD5</td>
</tr>
<tr>
<td>Description</td>
<td>This command will enable SSL on the Switch by implementing any one or combination of listed ciphersuites on the Switch. Entering this command without a parameter will enable the SSL status on the Switch. Enabling SSL will disable the web-manager on the Switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>ciphersuite</code> – A security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session. The user may choose any combination of the following:</td>
</tr>
<tr>
<td></td>
<td><code>RSA_with_RC4_128_MD5</code> – This ciphersuite combines the RSA key exchange, stream cipher RC4 encryption with 128-bit keys and the MD5 Hash Algorithm.</td>
</tr>
<tr>
<td></td>
<td><code>RSA_with_3DES_EDE_CBC_SHA</code> – This ciphersuite combines the RSA key exchange, CBC Block Cipher 3DES_EDE encryption and the SHA Hash Algorithm.</td>

<tr>
<td></td>
<td><code>DHE_DSS_with_3DES_EDE_CBC_SHA</code> – This ciphersuite combines the DSA Diffie Hellman key exchange, CBC Block Cipher 3DES_EDE encryption and SHA Hash Algorithm.</td>
</tr>
<tr>
<td></td>
<td><code>RSA_EXPORT_with_RC4_40_MD5</code> – This ciphersuite combines the RSA Export key exchange, stream cipher RC4 encryption with 40-bit keys. The ciphersuites are enabled by default on the Switch, yet the SSL status is disabled by default. Enabling SSL with a ciphersuite will not enable the SSL status on the Switch.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

#### Example usage:

To enable SSL on the Switch for all ciphersuites:

```
DES-3028P:4#enable ssl
Command: enable ssl

Note: Web will be disabled if SSL is enabled.
Success.
```

**NOTE:** Enabling SSL on the Switch will enable all ciphersuites. To utilize a particular ciphersuite, the user must eliminate other ciphersuites by using the `disable ssl` command along with the appropriate ciphersuites.

**NOTE:** Enabling the SSL function on the Switch will disable the port for the web manager (port 80). To log on to the web based manager, the entry of the URL must begin with `https://` (ex. `https://10.90.90.90`).
### disable ssl

**Purpose**

To disable the SSL function on the Switch.

**Syntax**

```
disable ssl {ciphersuite {RSA_with_RC4_128_MD5 |
RSA_with_3DES_EDE_CBC_SHA |
DHE_DSS_with_3DES_EDE_CBC_SHA |
RSA_EXPORT_with_RC4_40_MD5}}
```

**Description**

This command will disable SSL on the Switch and can be used to disable any one or combination of listed ciphersuites on the Switch.

**Parameters**

`ciphersuite` - A security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session. The user may choose any combination of the following:

1. `RSA_with_RC4_128_MD5` – This ciphersuite combines the RSA key exchange, stream cipher RC4 encryption with 128-bit keys and the MD5 Hash Algorithm.
2. `RSA_with_3DES_EDE_CBC_SHA` – This ciphersuite combines the RSA key exchange, CBC Block Cipher 3DES_EDE encryption and the SHA Hash Algorithm.
3. `DHE_DSS_with_3DES_EDE_CBC_SHA` – This ciphersuite combines the DSA Diffie Hellman key exchange, CBC Block Cipher 3DES_EDE encryption and SHA Hash Algorithm.
4. `RSA_EXPORT_with_RC4_40_MD5` – This ciphersuite combines the RSA Export key exchange, stream cipher RC4 encryption with 40-bit keys.

**Restrictions**

Only Administrator-level users can issue this command.

**Example usage:**

To disable the SSL status on the Switch:

```
DES-3028P:4#disable ssl
Command: disable ssl
Success.
DES-3028P:4#
```

To disable ciphersuite `RSA_EXPORT_with_RC4_40_MD5` only:

```
DES-3028P:4#disable ssl ciphersuite RSA_EXPORT_with_RC4_40_MD5
Command: disable ssl ciphersuite RSA_EXPORT_with_RC4_40_MD5
Success.
DES-3028P:4#
```

---

### config ssl cachetimeout timeout

**Purpose**

Used to configure the SSL cache timeout.

**Syntax**

```
config ssl cachetimeout timeout <value 60-86400>
```

**Description**

This command will set the time between a new key exchange between a client and a host using the SSL function. A new SSL session is established every time the client and host go through a
**config ssl cachetimeout timeout**

Key exchange. Specifying a longer timeout will allow the SSL session to reuse the master key on future connections with that particular host, therefore speeding up the negotiation process.

**Parameters**

`timeout <value 60-86400>` – Enter a timeout value between 60 and 86400 seconds to specify the total time an SSL key exchange ID stays valid before the SSL module will require a new, full SSL negotiation for connection. The default cache timeout is 600 seconds.

**Restrictions**

Only Administrator-level users can issue this command.

Example usage:

To set the SSL cachetimeout for 7200 seconds:

```
DES-3028P:4#config ssl cachetimeout timeout 7200
Command: config ssl cachetimeout timeout 7200
Success.
DES-3028P:4#
```

**show ssl cachetimeout**

Purpose: Used to show the SSL cache timeout.

Syntax: `show ssl cachetimeout`

Description: Entering this command will allow the user to view the SSL cache timeout currently implemented on the Switch.

Parameters: None.

Restrictions: None.

Example usage:

To view the SSL cache timeout on the Switch:

```
DES-3028P:4#show ssl cachetimeout
Command: show ssl cachetimeout
Cache timeout is 600 second(s).
DES-3028P:4#
```

**show ssl**

Purpose: Used to view the SSL status and the certificate file status on the Switch.

Syntax: `show ssl`

Description: This command is used to view the SSL status on the Switch.

Parameters: None.

Restrictions: None.

Example usage:

To view the SSL status on the Switch:
show ssl certificate

Purpose: Used to view the SSL certificate file status on the Switch.
Syntax: `show ssl certificate`
Description: This command is used to view the SSL certificate file information currently implemented on the Switch.
Parameters: None.
Restrictions: None.

Example usage:

To view certificate file information on the Switch:

```
DES-3028P:4# show ssl certificate
Command: show ssl certificate
Loaded with RSA Certificate!

DES-3028P:4#
```

download ssl certificate

Purpose: Used to download a certificate file for the SSL function on the Switch.
Syntax: `download ssl certificate <ipaddr> certfilename <path_filename 64> keyfilename <path_filename 64>
Description: This command is used to download a certificate file for the SSL function on the Switch from a TFTP server. The certificate file is a data record used for authenticating devices on the network. It contains information on the owner, keys for authentication and digital signatures. Both the server and the client must have consistent certificate files for optimal use of the SSL function. The Switch only supports certificate files with .der file extensions.
Parameters:
- `<ipaddr>` – Enter the IP address of the TFTP server.
- `certfilename <path_filename 64>` – Enter the path and the filename of the certificate file users wish to download.
- `keyfilename <path_filename 64>` – Enter the path and the filename of the key exchange file users wish to download.
Restrictions: Only Administrator-level users can issue this command.

Example usage:

To download a certificate file and key file to the Switch:

```
DES-3028P:4# download ssl certificate 192.168.1.1 certfilename /mycertfile.key keyfilename /mymykey.key
Command: download ssl certificate
To download a certificate file and key file to the Switch:

DES-3028P:4# download ssl certificate 192.168.1.1 certfilename /mycertfile.key keyfilename /mymykey.key
```

DES-3028P:4# show ssl certificate
Command: show ssl certificate
Loaded with RSA Certificate!

DES-3028P:4#
DES-3028P:4#download ssl certificate 10.53.13.94
certfilename c:/cert.der keyfilename c:/pkey.der

Command: download ssl certificate 10.53.13.94
certfilename c:/cert.der keyfilename c:/pkey.der

Certificate Loaded Successfully!

DES-3028P:4#
D-LINK SINGLE IP MANAGEMENT COMMANDS

Simply put, D-Link Single IP Management is a concept that will stack switches together over Ethernet instead of using stacking ports or modules. Switches using D-Link Single IP Management (labeled here as SIM) must conform to the following rules:

SIM is an optional feature on the Switch and can easily be enabled or disabled. SIM grouping has no effect on the normal operation of the Switch in the user’s network.

There are three classifications for switches using SIM. The Commander Switch (CS), which is the master switch of the group, Member Switch (MS), which is a switch that is recognized by the CS a member of a SIM group, and a Candidate Switch (CaS), which is a switch that has a physical link to the SIM group but has not been recognized by the CS as a member of the SIM group.

A SIM group can only have one Commander Switch (CS).

All switches in a particular SIM group must be in the same IP subnet (broadcast domain). Members of a SIM group cannot cross a router.

A SIM group accepts one Commander Switch (numbered 0) and up to 32 switches (numbered 0-31).

There is no limit to the number of SIM groups in the same IP subnet (broadcast domain), however a single switch can only belong to one group.

If multiple VLANs are configured, the SIM group will only utilize the default VLAN on any switch.

SIM allows intermediate devices that do not support SIM. This enables the user to manage a switch that is more than one hop away from the CS.

The SIM group is a group of switches that are managed as a single entity. The DES-3028/28G/28P/52/52P may take on three different roles:

**Commander Switch (CS)** – This is a switch that has been manually configured as the controlling device for a group, and takes on the following characteristics:
- It has an IP Address.
- It is not a Commander Switch or Member Switch of another Single IP group.
- It is connected to the Member Switches through its management VLAN.

**Member Switch (MS)** – This is a switch that has joined a single IP group and is accessible from the CS, and it takes on the following characteristics:
- It is not a CS or MS of another IP group.
- It is connected to the CS through the CS management VLAN.

**Candidate Switch (CaS)** – This is a switch that is ready to join a SIM group but is not yet a member of the SIM group. The Candidate Switch may join the SIM group through an automatic function of the DES-3028/28G/28P/52/52P, or by manually configuring it to be a MS of a SIM group. A switch configured as a CaS is not a member of a SIM group and will take on the following characteristics:
- It is not a CS or MS of another Single IP group.
- It is connected to the CS through the CS management VLAN.

The following rules also apply to the above roles:
1. Each device begins in the Commander state.
2. CS’s must change their role to CaS and then to MS, to become a MS of a SIM group. Thus the CS cannot directly be converted to a MS.
3. The user can manually configure a CS to become a CaS.
4. A MS can become a CaS by:
   a. Being configured as a CaS through the CS.
   b. If report packets from the CS to the MS time out.
5. The user can manually configure a CaS to become a CS
6. The CaS can be configured through the CS to become a MS.

After configuring one switch to operate as the CS of a SIM group, additional DES-3028/28G/28P/52/52P Switches may join the group by either an automatic method or by manually configuring the Switch to be a MS. The CS will then serve as the in band entry point for access to the MS. The CS’s IP address will become the path to all MS’s of the group and the CS’s Administrator’s password, and/or authentication will control access to all MS’s of the SIM group.

With SIM enabled, the applications in the CS will redirect the packet instead of executing the packets. The applications will decode the packet from the administrator, modify some data, and then send it to the MS. After execution, the CS may receive a response packet from the MS, which it will encode and send back to the administrator.
When a CS becomes a MS, it automatically becomes a member of the first SNMP community (includes read/write and read only) to which the CS belongs. However, if a MS has its own IP address, it can belong to SNMP communities to which other switches in the group, including the CS, do not belong.

**The Upgrade to v1.6**

To better improve SIM management, the DES-3028/28G/28P/52/52P Switches have been upgraded to version 1.6 in this release. Many improvements have been made, including:

The Commander Switch (CS) now has the capability to automatically rediscover member switches that have left the SIM group, either through a reboot or web malfunction. This feature is accomplished through the use of Discover packets and Maintain packets that previously set SIM members will emit after a reboot. Once a MS has had its MAC address and password saved to the CS’s database, if a reboot occurs in the MS, the CS will keep this MS information in its database and when a MS has been rediscovered, it will add the MS back into the SIM tree automatically. No configuration will be necessary to rediscover these switches. There are some instances where pre-saved MS switches cannot be rediscovered. For example, if the Switch is still powered down, if it has become the member of another group, or if it has been configured to be a Commander Switch, the rediscovery process cannot occur.

This version will support multiple switch upload and downloads for firmware, configuration files and log files, as follows:

- **Firmware** – The switch now supports multiple MS firmware downloads from a TFTP server.
- **Configuration Files** – This switch now supports multiple downloading and uploading of configuration files both to (for configuration restoration) and from (for configuration backup) MS’s, using a TFTP server.
- **Log** – The switch now supports uploading multiple MS log files to a TFTP server.

**NOTE:** For more details regarding improvements made in SIMv1.6, please refer to the White Paper located on the D-Link website.

The SIM commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable sim</td>
<td></td>
</tr>
<tr>
<td>disable sim</td>

</tbody>
</table>

Each command is listed, in detail, in the following sections.
### enable sim

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
<td>Used to enable Single IP Management (SIM) on the Switch</td>
</tr>
<tr>
<td><strong>Syntax</strong></td>
<td><code>enable sim</code></td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command will enable SIM globally on the Switch. SIM features and functions will not function properly unless this function is enabled.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td>None.</td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable SIM on the Switch:

```
DES-3028P:4#enable sim
Command: enable sim
Success.
DES-3028P:4#
```

### disable sim

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
<td>Used to disable Single IP Management (SIM) on the Switch</td>
</tr>
<tr>
<td><strong>Syntax</strong></td>
<td><code>disable sim</code></td>
</tr>
<tr>
<td><strong>Description</strong></td>
<td>This command will disable SIM globally on the Switch.</td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
<td>None.</td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable SIM on the Switch:

```
DES-3028P:4#disable sim
Command: disable sim
Success.
DES-3028P:4#
```

### show sim

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
<td>Used to view the current information regarding the SIM group on the Switch.</td>
</tr>
<tr>
<td><strong>Syntax</strong></td>
<td>`show sim {candidates {&lt;candidate_id 1-100&gt;}</td>
</tr>
</tbody>
</table>
| **Description** | This command will display the current information regarding the SIM group on the Switch, including the following:

- SIM Version – Displays the current Single IP Management version on the Switch.
- Firmware Version – Displays the current Firmware version on the Switch.
- Device Name – Displays the user-defined device name on the Switch. |

Example usage:

```
DES-3028P:4#show sim
```

```
SIM Version: 1.0
Firmware Version: 2.0
Device Name: DES-3028P
```

"
<table>
<thead>
<tr>
<th>show sim</th>
</tr>
</thead>
</table>
| **MAC Address** – Displays the MAC Address of the Switch.  
**Capabilities** – Displays the type of switch, be it Layer 2 (L2) or Layer 3 (L3).  
**Platform** – Switch Description including name and model number.  
**SIM State** – Displays the current Single IP Management State of the Switch, whether it be enabled or disabled.  
**Role State** – Displays the current role the Switch is taking, including Commander, Member or Candidate. A Stand-alone switch will always have the commander role.  
**Discovery Interval** – Time in seconds the Switch will send discovery packets out over the network.  
**Hold time** – Displays the time in seconds the Switch will hold discovery results before dropping it or utilizing it.  

**Parameters**  
- `candidates <candidate_id 1-100>` – Entering this parameter will display information concerning candidates of the SIM group. To view a specific candidate, include that candidate’s ID number, listed from 1 to 100.  
- `members <member_id 1-32>` – Entering this parameter will display information concerning members of the SIM group. To view a specific member, include that member’s id number, listed from 1 to 32.  
- `group {commander_mac <macaddr>}` – Entering this parameter will display information concerning the SIM group. To view a specific group, include the commander’s MAC address of the group.  
- `neighbor` – Entering this parameter will display neighboring devices of the Switch. A SIM neighbor is defined as a switch that is physically connected to the Switch but is not part of the SIM group. This screen will produce the following results:  
  - **Port** – Displays the physical port number of the commander switch where the uplink to the neighbor switch is located.  
  - **MAC Address** – Displays the MAC Address of the neighbor switch.  
  - **Role** – Displays the role(CS, CaS, MS) of the neighbor switch.  

**Restrictions** None.  

**Example usage:**  
To show the SIM information in detail:  

```
DES-3028P:4#show sim
Command: show sim

SIM Version : VER-1.61  
Firmware Version : 2.00.B23

DES-3028P:4#

**reconfig**

- **Purpose**: Used to connect to a member switch, through the commander switch, using Telnet.
- **Syntax**: `reconfig {member_id <value 1-32> | exit}
- **Description**: This command is used to reconnect to a member switch using Telnet.
- **Parameters**:
  - `member_id <value 1-32>` – Select the ID number of the member switch to configure.
  - `exit` – This command is used to exit from managing the member switch and will return to managing the commander switch.
reconfig

| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To connect to the MS, with member ID 2, through the CS, using the command line interface:

```
DES-3028P:4#reconfig member_id 2
Command: reconfig member_id 2

DES-3028P:4#
```

config sim_group

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to add candidates and delete members from the SIM group.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config sim_group [add &lt;candidate_id 1-100&gt; {&lt;password&gt;}]</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to add candidates and delete members from the SIM group by ID number.</td>
</tr>
</tbody>
</table>
| Parameters | `add <candidate_id 1-100> <password>` – Use this parameter to change a candidate switch (CaS) to a member switch (MS) of a SIM group. The CaS may be defined by its ID number and a password (if necessary).
`delete <member_id 1-32>` – Use this parameter to delete a member switch of a SIM group. The member switch should be defined by ID number. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To add a member:

```
DES-3028P:4#config sim_group add 2
Command: config sim_group add 2

Please wait for ACK...
GM Config Success !!!

Success.

DES-3028P:4#
```

To delete a member:

```
DES-3028P:4# config sim_group delete 1
Command: config sim_group delete 1

Please wait for ACK...
Success.

DES-3028P:4#
```
### config sim

**Purpose**

Used to configure role parameters for the SIM protocol on the Switch.

**Syntax**

```
config sim [[commander {group_name <groupname 64>} | candidate] | dp_interval <sec 30-90> | hold_time <sec 100-255>]
```

**Description**

This command is used to configure parameters of switches of the SIM.

**Parameters**

- **commander** – Use this parameter to configure the commander switch (CS) for the following parameters:
  - **dp_interval <30-90>** – The user may set the discovery protocol interval, in seconds that the Switch will send out discovery packets. Returning information to the CS will include information about other switches connected to it. (Ex. MS, CaS). The user may set the `dp_interval` from 30 to 90 seconds.
  - **hold time <100-255>** – Using this parameter, the user may set the time, in seconds, the Switch will hold information sent to it from other switches, utilizing the discovery interval protocol. The user may set the hold time from 100 to 255 seconds.

**Restrictions**

Only Administrator-level users can issue this command.

**Example usage:**

To change the time interval of the discovery protocol:

```
DES-3028P:4# config sim dp_interval 30
Command: config sim dp_interval 30
Success.
DES-3028P:4#
```

To change the hold time of the discovery protocol:

```
DES-3028P:4# config sim hold_time 120
Command: config sim hold_time 120
Success.
DES-3028P:4#
```
To transfer the CS (commander) to be a CaS (candidate):

```plaintext
DES-3028P:4# config sim candidate
Command: config sim candidate
Success.
DES-3028P:4#
```

To transfer the Switch to be a CS:

```plaintext
DES-3028P:4# config sim commander
Command: config sim commander
Success.
DES-3028P:4#
```

To update the name of a group:

```plaintext
DES-3028P:4# config sim commander group_name Trinity
Command: config sim commander group_name Trinity
Success.
DES-3028P:4#
```

download sim

### upload sim_ms

**Purpose**: User to upload a configuration file to a TFTP server from a specified member of a SIM group.

**Syntax**:

```
upload sim_ms [configuration_to_tftp | log_to_tftp] <ipaddr> <path_filename> [members <mslist> | all]
```

**Description**: This command will upload a configuration file to a TFTP server from a specified member of a SIM group.

**Parameters**:

- `<ipaddr>` – Enter the IP address of the TFTP server to which to upload a configuration file.
- `<path_filename>` – Enter a user-defined path and file name on the TFTP server to which to upload configuration files.
- `<member_id 1-32>` – Enter this parameter to specify the member to which to upload a switch configuration file. The user may specify a member or members by adding the ID number of the specified member.

**Restrictions**: Only Administrator-level users can issue this command.

Example usage:

To upload configuration files to a TFTP server:
DES-3028P:4# upload sim_ms configuration_to_tftp 10.55.47.1 D:\configuration.txt 1

Command: upload sim_ms configuration 10.55.47.1 D:\configuration.txt 1

This device is upload configuration. Please wait several minutes ...

DES-3028P:4#
SMTP or Simple Mail Transfer Protocol is a function of the Switch that will send switch events to mail recipients based on e-mail addresses entered using the commands below. The Switch is to be configured as a client of SMTP while the server is a remote device that will receive messages from the Switch, place the appropriate information into an e-mail and deliver it to recipients configured on the Switch. This can benefit the Switch administrator by simplifying the management of small workgroups or wiring closets, increasing the speed of handling emergency Switch events and enhancing security by recording questionable events occurring on the Switch.

The Switch plays four important roles as a client in the functioning of SMTP:

- The server and server virtual port must be correctly configured for this function to work properly. This is accomplished in the `config smtp` command by properly configuring the `server` and `server_port` parameters.
- Mail recipients must be configured on the Switch. This information is sent to the server which then processes the information and then e-mails Switch information to these recipients. Up to 8 e-mail recipients can be configured on the Switch using the `config smtp` command by configuring the `add mail_receiver` and `delete mail_receiver` parameters.
- The administrator can configure the source mail address from which messages are delivered to configured recipients. This can offer more information to the administrator about Switch functions and problems. The personal e-mail can be configured using the `config smtp` command and setting the `self_mail_addr` parameter.
- The Switch can be configured to send out test mail to first ensure that the recipient will receive e-mails from the SMTP server regarding the Switch. To configure this test mail, the SMTP function must first be enabled using the `enable smtp` command and then by entering the `smtp send_testmsg` command. All recipients configured for SMTP will receive a sample test message from the SMTP server, ensuring the reliability of this function.

THE SWITCH WILL SEND OUT E-MAIL TO RECIPIENTS WHEN ONE OR MORE OF THE FOLLOWING EVENTS OCCUR:

- When a cold start occurs on the Switch.
- When a port enters a link down status.
- When a port enters a link up status.
- When SNMP authentication has been denied by the Switch.
- When a switch configuration entry has been saved to the NVRAM by the Switch.
- When an abnormality occurs on TFTP during a firmware download event. This includes `in-process`, `invalid-file`, `violation`, `file-not-found`, `complete` and `time-out` messages from the TFTP server.
- When a system reset occurs on the Switch.

Information within the e-mail from the SMTP server regarding switch events includes:

- The source device name and IP address.
- A timestamp denoting the identity of the SMTP server and the client that sent the message, as well as the time and date of the message received from the Switch. Messages that have been relayed will have timestamps for each relay.
- The event that occurred on the Switch, prompting the e-mail message to be sent.
- When an event is processed by a user, such as save or firmware upgrade, the IP address, MAC address and User Name of the user completing the task will be sent along with the system message of the event occurred.
- When the same event occurs more than once, the second mail message and every repeating mail message following will have the system’s error message placed in the subject line of the mail message.

The following details events occurring during the Delivery Process:

- Urgent mail will have high priority and be immediately dispatched to recipients while normal mail will be placed in a queue for future transmission.
- The maximum number of untransmitted mail messages placed in the queue cannot exceed 30 messages. Any new messages will be discarded if the queue is full.
- If the initial message sent to a mail recipient is not delivered, it will be placed in the waiting queue until its place in the queue has been reached, and then another attempt to transmit the message is made.
- The maximum attempts for delivering mail to recipients is three. Mail message delivery attempts will be tried every five minutes until the maximum number of attempts is reached. Once reached and the message has not been successfully delivered, the message will be dropped and not received by the mail recipient.
- If the Switch shuts down or reboots, mail messages in the waiting queue will be lost.
The SMTP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable smtp</td>
<td></td>
</tr>
<tr>
<td>disable smtp</td>
<td></td>
</tr>
<tr>
<td>config smtp</td>
<td>{server &lt;ipaddr&gt;</td>
</tr>
<tr>
<td>show smtp</td>
<td></td>
</tr>
<tr>
<td>smtp send_testmsg</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### enable smtp

**Purpose**
Used to enable the Switch as a SMTP client.

**Syntax**
```plaintext
enable smtp
```

**Description**
This command, in conjunction with the `disable smtp command` will enable and disable the Switch as a SMTP client without changing configurations.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To enable SMTP on the Switch.

```
DES-3028:4#enable smtp
Command: enable smtp
Success.
DES-3028:4#
```

### disable smtp

**Purpose**
Used to disable the Switch as a SMTP client.

**Syntax**
```plaintext
disable smtp
```

**Description**
This command, in conjunction with the `enable smtp command` will enable and disable the Switch as a SMTP client without changing configurations.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To disable SMTP on the Switch.

```
DES-3028:4#disable smtp
Command: disable smtp
Success.
DES-3028:4#
```
config smtp

Purpose
Used to configure necessary information in setting up the Switch as an SMTP client.

Syntax
```
config smtp {server <ipaddr> | server_port <tcp_port_number 1-65535> | self_mail_addr <mail_addr 64> | [add mail_receiver <mail_addr 64> | delete mail_receiver <index 1-8>]
```

Description
This command will allow the user to set the necessary parameters to configure the SMTP server and mail recipients. This command must be completely configured properly for the SMTP function of the switch to correctly operate.

Parameters

- `server <ipaddr>` – Enter the IP address of the SMTP server on a remote device.
- `server_port <tcp_port_number 1-65535>` – Enter the virtual port number that the Switch will connect with on the SMTP server. The common port number for SMTP is 25.
- `self_mail_addr <mail_addr 64>` – Enter the e-mail address from which mail messages will be sent. This address will be the from address on the e-mail message sent to a recipient. Only one self mail address can be configured for this Switch. This string can be no more than 64 alphanumeric characters.
- `add mail_receiver <mail_addr 64>` – Choose this parameter to add mail recipients to receive e-mail messages from the Switch. Up to 8 e-mail addresses can be added per Switch.
- `delete mail_receiver <index 1-8>` – Choose this parameter to delete mail recipients from the configured list receiving e-mail messages from the Switch. Up to 8 e-mail addresses can be added per Switch.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To configure the SMTP settings:

```
DES-3028:4#config smtp server 166.99.66.33 server_port 25 add mail receiver darren_tremblett@nhl.com
Command: config smtp server 166.99.66.33 server_port 25 add mail receiver darren_tremblett@nhl.com
Success.
DES-3028:4#
```

show smtp

Purpose
Used to view configured parameters for the SMTP function on the Switch.

Syntax
```
show smtp
```

Description
This command will display parameters configured for SMTP on the Switch, including server information, mail recipients and the current running status of SMTP on the Switch.

Parameters
None.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To view the SMTP parameters currently configured on the Switch:
DES-3028:4# show smtp
Command: show smtp

smtp status: Enabled
smtp server address : 166.99.66.33
smtp server port : 25
self mail address: smtp@30XX.dev

<table>

</tbody>
</table>

smtp send_testmsg

Purpose       Used to send a test message to mail recipients configured on the Switch.
Syntax        smtp send_testmsg
Description    This command is used to send test messages to all mail recipients configured on the Switch, thus testing the configurations set and the reliability of the SMTP server.
Parameters     None.
Restrictions  Only Administrator-level users can issue this command.

Example usage:
To send a test mail message to all configured mail recipients.

DES-3028:4# smtp send_testmsg
Command: smtp send_testmsg

Subject: This is a SMTP test.
Content: Hello everybody!!

Sending mail, please wait...

Success.

DES-3028:4#
DES-3028P and the DES-3052P support Power over Ethernet (PoE) as defined by the IEEE 802.3af specification. Ports 1-24/1-48 supply 48 VDC power to PDs over Category 5 or Category 3 UTP Ethernet cables. The DES-3028P and the DES-3052P follow the standard PSE pinout *Alternative A*, whereby power is sent out over pins 1, 2, 3 and 6. The DES-3028P and the DES-3052P works with all D-Link 802.3af capable devices.

The DES-3028P and the DES-3052P include the following PoE features:

- The auto-discovery feature recognizes the connection of a PD (Powered Device) and automatically sends power to it.
- The auto-disable feature will occur under two conditions: first, if the total power consumption exceeds the system power limit; and second, if the per port power consumption exceeds the per port power limit.
- The active circuit protection feature automatically disables the port if there is a short. Other ports will remain active.

PDs receive power according to the following classification:

<table>
<thead>
<tr>
<th>Class</th>
<th>Max power used by PD</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0.44 to 12.95W</td>
</tr>
<tr>
<td>1</td>
<td>0.44 to 3.84W</td>
</tr>
<tr>
<td>2</td>
<td>3.84 to 6.49W</td>
</tr>
<tr>
<td>3</td>
<td>6.49 to 12.95W</td>
</tr>
</tbody>
</table>

PSE provides power according to the following classification:

<table>
<thead>
<tr>
<th>Class</th>
<th>Max power provided by PSE</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>15.4W</td>
</tr>
<tr>
<td>1</td>
<td>4.0W</td>
</tr>
<tr>
<td>2</td>
<td>7.0W</td>
</tr>
<tr>
<td>3</td>
<td>15.4W</td>
</tr>
</tbody>
</table>

The PoE commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config poe system</td>
<td>{power_limit &lt;value 37-185&gt;</td>
</tr>
<tr>
<td>config poe ports</td>
<td>[all</td>
</tr>
<tr>
<td>show poe</td>
<td>[system</td>
</tr>
</tbody>
</table>

**NOTE:** The maximum PoE power limit for the DES-3028P is 185W and the maximum PoE power limit for the DES-3052P is 370W.

Each command is listed in detail in the following sections.
config poe system
deny_low_priority_port
Description Allows the user to configure the parameters for the whole PoE system.
Parameters
power_limit – The power limit parameter allows the user to configure the power budget of whole PoE system. The minimum setting is 37 W and the maximum is 370W (depending on the power supplier’s capability). Default setting is 370 W.
power_disconnect_method – This parameter is used to configure the power management disconnection method. When the total consumed power exceeds the power budget, the PoE controller initiates a port disconnection to prevent overloading the power supply. The controller uses one of the following two ways to implement the disconnection:
  deny_next_port – After the power budget has been exceeded, the next port attempting to power up is denied, regardless of its priority.
  deny_low_priority_port – After the power budget has been exceeded, the next port attempting to power up, causes the port with the lowest priority to shut down (to allow high-priority ports to power up).

The default setting is deny_next_port.
Restrictions Only Administrator-level users can issue this command.

Example usage:
To config the PoE System on the Switch:

```
DES-3028P:4#config poe system power_limit 185
power_disconnect_method deny_next_port
Command: config poe system power_limit 185
power_disconnect_method deny_next_port
Success.
DES-3028P:4#
```

config poe ports
Purpose Used to configure the PoE port settings.
Syntax config poe ports [all | portlist] [state [enable | disable] | priority [critical | high | low] | power_limit [class_0 | class_1 | class_2 | class_3 | user_define <value 1000-16800>]]
Description The config poe ports command is used to configure the PoE port settings.
Parameters portlist – Specifies a range of ports to be configured or all the ports.
all – Specifies that all ports on the Switch will be configured for PoE.
state – Enables or disables the PoE function on the Switch.
priority – Setting the port priority affects power-up order and shutdown order. Power-up order: When the Switch powers-up or reboots, the ports are powered up according to their priority (critical first, then high and finally low). Shutdown order: When the power limit has been exceeded, the ports will shut down according to their...
**config poe ports**

priority if the power disconnect method is set to deny_low_priority_port.

- **critical** – Specifying this parameter will nominate these ports having the highest priority for all configured PoE ports. These ports will be the first ports to receive power and the last to disconnect power.

- **high** – Specifying this parameter will nominate these ports as having the second highest priority for receiving power and shutting down power.

- **low** – Specifying this parameter will nominate these ports as having the lowest priority for receiving and shutting down power. These ports will be the first ports to have their power disconnected if the power_disconnect_method chosen in the config poe system command is deny_low_priority_port.

- **power_limit** – Allows the user to configure the per-port power limit. If a port exceeds its power limit, the PoE system will shut down that port. The minimum user-Defined setting is 1000mW and maximum is 16800mW. The default setting is 15400mW. The user may also choose to define a power class by which to set the power limit, based on the PSE table at the beginning of this section.

  - **class_0** – Choosing this class will set the maximum port limit at 15.4W.
  - **class_1** – Choosing this class will set the maximum port limit at 4.0W.
  - **class_2** – Choosing this class will set the maximum port limit at 7.0W.
  - **class_3** – Choosing this class will set the maximum port limit at 15.4.0W.

- **user_define** – Choosing this parameter will allow the user to set a power limit between 1000 and 16800mW with a default value of 15400mW.

**Restrictions**

Only Administrator-level users can issue this command.

Example usage:

To config the Switch’s ports for PoE:

```
DES-3028P:4#config poe ports 1-3 state enable priority critical power_limit class_0
Command: config poe ports 1-3 state enable priority critical power_limit class_0

Power limit has been set to 15400mW(Class 0 PD upper power limit 12.95W + power loss on cable).
Success.

DES-3028P:4#
```

**show poe system**

**Purpose**

Used to display the setting and actual values of the whole PoE system.

**Syntax**

```
show poe [system | ports {<portlist>}]  
```

**Description**

Display the settings, actual values and port configuration of the whole PoE system.
show poe system

Parameters
- **system** – Choosing this parameter will display the system settings for PoE, such as switch power limit, consumption, remaining useable power and the power disconnection method.
- **ports** – Choosing this parameter will display the settings for PoE on a port-by-port basis.
  
  `<portlist>` – Enter a port or range of ports to be displayed for their PoE settings.

Restrictions
- None.

Example usage:

To display the power settings for the switch system:

```
DES-3028P:4#show poe system
Command: show poe system

PoE System Information
---------------------------------------------------
Power Limit : 185(watts)
Power Consumption : 0(watts)
Power Remained : 185(watts)
Power Disconnection Method : Deny Next Port

If power disconnection method is set to deny next port, then the system can not
utilize out of its maximum power capacity. The maximum unused watt is 19W.
```

Example usage:

To display the power settings for the switch’s ports
DES-3028P:4# show poe ports
Command: show poe ports

<table>

DES-3028P:4#
The Cable Diagnostics commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>cable_diag ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### cable_diag ports

**Purpose**
Used to test the copper cable. If there is an error on the cable, it can determine the type of error and the position where the error occurred.

**Syntax**
cable_diag ports [<portlist> | all]

**Description**
For FE port, two pairs of cable will be diagnosed. The type of cable error can be open and short. Open means that the cable in the error pair does not have a connection at the specified position. Short means that the cables in the error pair has a short problem at the specified position. When a port is in link-up status, the test will obtain the distance of the cable. Since the status is link-up, the cable will not have the short or open problem. When a port is in link-down status, the link-down may be caused by many factors. When the port has a normal cable connection, but the remote partner is powered off, the cable diagnosis can still diagnose the health of the cable as if the remote partner is powered on. When the port does not have any cable connection, the result of the test will indicate no cable. The test will detect the type of error and the position where the error occurs. Note that this test will consume a low number of packets. Since this test is for copper cable, the port with fiber cable will be skipped from the test. Some phy chips can't support Cable Diagnostic function, and it will display at the result.

**Parameters**

- `<portlist>` – Specifies a range of ports to be tested.
- `all` – All ports

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To test the cable on specific ports:

```
DES-3028P:4#cable_diag ports 1-3,10
Command: cable_diag ports 1-3,10
Perform Cable Diagnostics ...
```

<table>

DES-3028P:4#
DHCP LOCAL RELAY COMMANDS

The DHCP Local Relay commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config dhcp_local_relay</td>
<td>vlan[&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>enable dhcp_local_relay</td>
<td></td>
</tr>
<tr>
<td>disable dhcp_local_relay</td>
<td></td>
</tr>
<tr>
<td>show dhcp_local_relay</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config dhcp_local_relay vlan**

**Purpose**
Used to enable/disable DHCP local relay function to vlan.

**Syntax**
```plaintext
config dhcp_local_relay vlan [<vlan_name 32>| vlanid <vidlist>] state [enable | disable]
```

**Description**
The `config dhcp_local_relay vlan` command is used to enable /disable DHCP local relay function for specified vlan. When DHCP local relay is enabled for the VLAN, the DHCP packet will be relayed in broadcast way without change of the source MAC address and gateway address. DHCP option 82 will be automatically added.

**Parameters**
- `<vlan_name 32>` – The name of the VLAN to be enabled DHCP local relay.
- `<vidlist>` – Specifies a range of VLAN IDs to be configured.
- `state` – Enable or disable DHCP local relay for specified vlan.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**
To enable DHCP local relay for the default vlan:

```
DES-3028P:4#config dhcp_local_relay vlan default state enable
Command: config dhcp_local_relay vlan default state enable
Success.
DES-3028P:4#
```

**enable dhcp_local_relay**

**Purpose**
Used to enable the DHCP local relay function on the switch.

**Syntax**
```plaintext
enable dhcp_local_relay
```

**Description**
The `enable dhcp_local_relay` command globally enables the DHCP local relay function on the switch.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.
Example usage:
To enable DHCP local relay function:

```
DES-3028P:4#enable dhcp_local_relay
Command: enable dhcp_local_relay
Success.
DES-3028P:4#
```

```text
**disable dhcp_local_relay**
Purpose: Used to disable the DHCP local relay function on the switch.
Syntax: disable dhcp_local_relay
Description: The disable dhcp_local_relay command globally disables the DHCP local relay function on the switch.
Parameters: None.
Restrictions: Only Administrator-level users can issue this command.
```

Example usage:
To disable DHCP local relay function:

```
DES-3028P:4#disable dhcp_local_relay
Command: disable dhcp_local_relay
Success.
DES-3028P:4#
```

```text
**show dhcp_local_relay**
Purpose: Used to display the current DHCP local relay configuration.
Syntax: show dhcp_local_relay
Description: The show dhcp_local_relay command displays the current DHCP local relay configuration.
Parameters: None.
Restrictions: None.
```

Example usage:
To show DHCP local relay function:

```
DES-3028P:4# show dhcp_local_relay
Command: show dhcp_local_relay
DHCP/BOOTP Local Relay Status : Disabled
DHCP/BOOTP Local Relay VLAN List : 1,3-4
DES-3028P:4#
```
The Gratuitous ARP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config gratuitous_arp send</td>
<td>[enable</td>
</tr>
<tr>
<td>ipif_status_up</td>
<td></td>

<td></td>
</tr>
<tr>
<td>show gratuitous_arp</td>
<td>{ipif &lt;ipif_name 12&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config gratuitous_arp send ipif_status_up**

**Purpose**
Used to enable/disable send gratuitous ARP request while the IP interface status is up.

**Syntax**
config gratuitous_arp send ipif_status_up [enable | disable]

**Description**
The command is used to enable/disable sending of gratuitous ARP request packet while IPIF interface is up. This is used to automatically announce the interface's IP address to other nodes. By default, the state is enabled, and only one gratuitous ARP packet will be broadcast.

**Parameters**

- **enable** – Enable sending of gratuitous ARP when IPIF status is up.
- **disable** – Disable sending of gratuitous ARP when IPIF status is up.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To enable a gratuitous ARP request:

```
DES-3028P:4#config gratuitous_arp send ipif_status_up enable
Command: config gratuitous_arp send ipif_status_up enable
Success.
DES-3028P:4#
```

**config gratuitous_arp send duplicate_ip_detected**

**Purpose**
Used to enable/disable the sending of gratuitous ARP requests while duplicate IP addresses are detected.

**Syntax**
config gratuitous_arp send duplicate_ip_detected [enable|disable]

**Description**
The command is used to enable/disable sending of gratuitous ARP request packets while duplicate IPs are detected. By default, the state is...
config gratuitous_arp send duplicate_ip_detected

enabled. For this command, the duplicate IP detected means that the system has received an ARP request packet that was sent by an IP address that matched the system's own IP address. In this case, the system knows that somebody out there uses an IP address that is conflicting with the system. In order to reclaim the correct host of this IP address, the system can send out the gratuitous ARP request packet for this duplicate IP address.

Parameters

- **enable** – Enable sending of gratuitous ARP when duplicate IP is detected.
- **disable** – Disable sending of gratuitous ARP when duplicate IP is detected.

Restrictions

Only Administrator-level users can issue this command.

Example usage:

To enable gratuitous ARP request when a duplicate IP is detected:

```
DES-3028P:4# config gratuitous_arp duplicate_ip_detected enable
Command: config gratuitous_arp duplicate_ip_detected enable
Success.
DES-3028P:4#
```

config gratuitous_arp learning

Purpose

Used to enable/disable learning of ARP entries in ARP cache based on the received gratuitous ARP packets.

Syntax

```
config gratuitous_arp learning [enable|disable]
```

Description

Normally, the system will only learn the ARP reply packet or a normal ARP request packet that asks for the MAC address that corresponds to the system's IP address.

The command is used to enable/disable learning of ARP entry in ARP cache based on the received gratuitous ARP packet. The gratuitous ARP packet is sent by a source IP address that is identical to the IP that the packet is queries for. Note that, with the gratuitous ARP learning, the system will not learn new entry but only do the update on the ARP table based on the received gratuitous ARP packet.

By default, the state is Enabled.

Parameters

- **enable** – Enable learning of ARP entries based on the received gratuitous ARP packet.
- **disable** – Disable learning of ARP entry based on the received gratuitous ARP packet.

Restrictions

Only Administrator-level users can issue this command.

Example usage:

To enable learning of ARP entries based on the received gratuitous ARP packets:

```
DES-3028P:4# config gratuitous_arp learning enable
Command: config gratuitous_arp learning enable
Success.
DES-3028P:4#
```
### config gratuitous_arp periodical_send

**Purpose**
Used to configure the interval for periodical sending of gratuitous ARP request packets.

**Syntax**
```
config gratuitous_arp send periodically ipif <ipif_name 12> interval <value 0-65535>
```

**Description**
This command is used to configure the interval for periodical sending of gratuitous ARP request packets. By default, the interval is 0.

**Parameters**
- `<ipif_name 12>` – Interface name of L3 interface.
- `<value 0-65535>` – Periodically send gratuitous ARP interval time in seconds. 0- means it will not send gratuitous ARP periodically.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To configure gratuitous ARP intervals for the IPIF System:

```
DES-3028P:4# config gratuitous_arp send periodically ipif System interval 5
Command: config gratuitous_arp send periodically ipif System interval 5
Success.
DES-3028P:4#
```

### enable gratuitous_arp trap and log

**Purpose**
Used to enable the gratuitous ARP trap and log.

**Syntax**
```
enable gratuitous_arp {ipif <ipif_name 12>} {trap |log}
```

**Description**
The command is used to enable gratuitous ARP trap and log states. The switch can trap and log the IP conflict event to inform the administrator. By default, the trap is disabled and event log is enabled.

**Parameters**
- `<ipif_name 12>` – Interface name of L3 interface.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage:**

To enable the System’s interface gratuitous ARP log and trap:

```
DES-3028P:4# enable gratuitous_arp System trap log
Command: enable gratuitous_arp System trap log
Success.
DES-3028P:4#
```

### disable gratuitous_arp trap and log

**Purpose**
Used to disable the gratuitous ARP trap and log.

**Syntax**
```
disable gratuitous_arp {ipif <ipif_name 12>} {trap |log}
```

**Description**
The command is used to disable the gratuitous ARP trap and log states. The switch can trap and log the IP conflict event to inform the administrator. By default, the trap is disabled and event log is enabled.

**Parameters**
- `<ipif_name 12>` – Interface name of L3 interface.
**disable gratuitous_arp trap and log**

| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To disable the System’s interface gratuitous ARP log and trap:

```
DES-3028P:4#disable gratuitous_arp System trap log
Command: disable gratuitous_arp System trap log
Success.
DES-3028P:4#
```

**show gratuitous_arp**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display gratuitous ARP configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show gratuitous_arp {ipif &lt;ipif_name&gt;}</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show gratuitous_arp</code> command is used to display gratuitous ARP configurations.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;ipif_name 12&gt;</code> – Interface name of L3 interface.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To display gratuitous ARP log and trap states:

```
DES-3028P:4# show gratuitous_arp
Command: show gratuitous_arp

Send on IPIF status up : Enabled
Send on Duplicate_IP_Detected : Disabled
Gratuitous ARP Learning : Enabled

IP Interface Name : System
Gratuitous ARP Trap/Log : Disabled
Gratuitous ARP Log : Enabled
Gratuitous ARP Periodical Send Interval : 5

DES-3028P:4#
```
The VLAN Trunking commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable vlan_trunk</td>
<td></td>
</tr>
<tr>
<td>disable vlan_trunk</td>
<td></td>
</tr>
<tr>
<td>config vlan_trunk ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show vlan_trunk</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable vlan_trunk**

Purpose: Used to enable the VLAN trunk function.

Syntax: `enable vlan_trunk`

Description: When the VLAN trunk function is enabled, the VLAN trunk ports shall be able to forward all tagged frames with any VID.

Parameters: None.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To enable the VLAN Trunk:

```
DES-3028P:4#enable vlan_trunk
Command: enable vlan_trunk
Success.
DES-3028P:4#
```

**disable vlan_trunk**

Purpose: Used to disable the VLAN trunk function.

Syntax: `disable vlan_trunk`

Description: This command is used to disable the VLAN trunk function.

Parameters: None.

Restrictions: Only Administrator-level users can issue this command.

Example usage:

To disable the VLAN Trunk:

```
DES-3028P:4#disable vlan_trunk
Command: disable vlan_trunk
Success.
DES-3028P:4#
```
### config vlan_trunk

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure a port as a VLAN trunk port.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config vlan_trunk ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure a port as a VLAN trunk port. By default, none of the ports on the Switch are VLAN trunk ports. A VLAN trunk port and a non-VLAN trunk port cannot be grouped as an aggregated link. To change the VLAN trunk setting for an aggregated link, the user must apply the command to the master port. However, this setting will disappear as the aggregated link is destroyed, and the VLAN trunk setting of the individual port will follow the original setting of the port. If the command is applied to link aggregation member port excluding the master, the command will be rejected. The ports with different VLAN configurations are not allowed to form an aggregated link. However, if they are specified as VLAN trunk ports, they are allowed to form an aggregated link. For a VLAN trunk port, the VLANs on which the packets can be bypassed will not be advertised by GVRP on that particular port. However, since the traffic on these VLANs are forwarded, this vlan trunk port should participate the MSTP instances corresponding to these VLANs.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specifies the list of ports to be configured. <code>enable</code> – Specifies that the port is a VLAN trunk port. <code>disable</code> – Specifies that the port is not a VLAN trunk port.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure a VLAN Trunk port:

```
DES-3028P:4#config vlan_trunk ports 1-5 state enable
Command: config vlan_trunk ports 1-5 state enable
Success.
DES-3028P:4#
```
To configure a VLAN Trunk port if Port 6 is LA-1 member port; port 7 is LA-2 master port.

```
DES-3028P:4# config vlan_trunk ports 6-7 state enable
Command: configure vlan_trunk ports 6-7 state enable

Can not operate the member ports of any trunk.

DES-3028P:4# config vlan_trunk ports 7 state disable
Command: config vlan_trunk ports 7 state disable

Success.

DES-3028P:4# config vlan_trunk ports 6-7 state disable
Command: config vlan_trunk ports 6-7 state disable

Can not operate the member ports of any trunk.
```

DES-3028P:4#

To configure a VLAN Trunk port if Port 6 is LA-1 member port, port 7 is LA-1 master port.

```
DES-3028P:4# config vlan_trunk ports 6-7 state enable
Command: config vlan_trunk ports 6-7 state enable

Success.
```

DES-3028P:4#

To configure a VLAN Trunk port if Port 6,7 have the same VLAN configurations before enable VLAN trunking. Port 6 is LA-1 member port; port 7 is LA-1 master port.

```
DES-3028P:4# config vlan_trunk ports 7 state disable
Command: config vlan_trunk ports 7 state disable

Success.

DES-3028P:4# config vlan_trunk ports 6-7 state disable
Command: config vlan_trunk ports 6-7 state disable

Success.
```

DES-3028P:4#

---

**show vlan_trunk**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display VLAN trunk configuration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show vlan_trunk</code></td>
</tr>
<tr>
<td>Description</td>
<td>Shows the VLAN trunk information.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>
Example usage:

To display VLAN Trunk information:

```
DES-3028P:4#show vlan_trunk
Command: show vlan_trunk

VLAN Trunk           :Enable
VLAN Trunk Port      :1-5,7

DES-3028P:4#
```
The QinQ commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable qinq</td>
<td></td>
</tr>
<tr>
<td>disable qinq</td>
<td></td>
</tr>
<tr>
<td>show qinq</td>
<td></td>
</tr>
<tr>
<td>config qinq ports</td>
<td>&lt;portlist&gt;</td>
</tr>
<tr>
<td>show qinq ports</td>
<td>{&lt;portlist&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**enable qinq**

**Purpose** This command is used to enable the QinQ mode.

**Syntax** `enable qinq`

**Description** This command enables QinQ mode.

When QinQ is enabled, all network port roles will be NNI port and their outer TPID will be set to 88a8. All existing static VLANs will run as SP-VLAN. All dynamically learned L2 address will be cleared. GVRP and STP need to be disabled manually.

If you need to run GVRP on the switch, firstly enable GVRP manually. The default setting of QinQ is disabled.

**Parameters** None.

**Restrictions** Only Administrator-level users can issue this command.

Example usage:

To enable QinQ:

```
DES-3028P:4#enable qinq
Command: enable qinq
Success.
DES-3028P:4#
```

**disable qinq**

**Purpose** This command is used to disable the QinQ mode.

**Syntax** `disable qinq`

**Description** This command disables QinQ mode.

All dynamically learned L2 address will be cleared. All dynamically registered VLAN entries will be cleared, GVRP will be disabled.

If you need to run GVRP on the switch, firstly enable GVRP manually. All existing SP-VLANs will run as static 1Q VLANs. The default setting of QinQ is disabled.

**Parameters** None.
disable qinq
Restrictions Only Administrator-level users can issue this command.

Example usage:
To disable QinQ:

```bash
DES-3028P:4#disable qinq
Command: disable qinq
Success.
DES-3028P:4#
```

show qinq
Purpose Used to show global qinq
Syntax `show qinq`
Description This command is used to show the global QinQ status.
Parameters None.
Restrictions Only Administrator-level users can issue this command.

Example usage:
To show global QinQ status:

```bash
DES-3028P:4#show qinq
Command: show qinq
QinQ Status: Enabled
DES-3028P:4#
```

configure qinq port
Purpose Used to configure qinq ports.
Syntax `config qinq ports [<portlist>]|all|{role [nni | uni] | tpid <hex 0x0–0xffff>}
Description This command used to configure the QinQ VLAN mode for ports, including:
The port role in double tag VLAN mode, and port outer TPID.
This setting will not be effective when QinQ mode is disabled.
Parameters `<portlist>` – A range of ports to configure.
`role` – Port role in QinQ mode, it can be UNI port or NNI port.
`TPID` – Specifies the tpid of the Double VLAN. The default setting is
0x88a8. This switch does not support TPID 0x8810.
Restrictions Only Administrator-level users can issue this command.
Example usage:
To configure port list 1-4 as NNI port, set outer TPID to 0x88a8:

```
DES-3028P:4# config qinq ports 1-4 role nni tpid 0x88a8
Command: config qinq ports 1-4 role nni tpid 0x88a8
Success.
DES-3028P:4#
```

**show qinq ports**

Purpose: Used to show global qinq and port's qinq mode status.

Syntax: `show qinq ports <portlist>`

Description: The command used to show the qinq configuration for a port, including:
port role in QinQ mode, port outer TPID, that is applied to the port.

Parameters:
`<portlist>` – Specifies a range of ports to be displayed.
If no parameter is specified, the system will display all port information.

Restrictions: Only Administrator-level users can issue this command.

Example usage:
To show double tagging mode for ports 1-4 of unit 1:

```
DES-3028P:4# DES-3028P:4# show qinq ports 4
Command: show qinq ports 4

<table>
<thead>
<tr>
<th>Port</th>
<th>Role</th>
<th>TPID</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>Normal</td>
<td>0x8100</td>
</tr>
</tbody>
</table>

Total Entries : 1

DES-3028P:4#

</table>

Each command is listed, in detail, in the following sections.

enable asymmetric_vlan

Purpose: Used to enable the asymmetric VLAN function on the Switch.
Syntax: `enable asymmetric_vlan`
Description: This command enables the asymmetric VLAN function on the Switch.
Parameters: None.
Restrictions: Only Administrator-level users can issue this command.

Example usage:

To enable asymmetric VLANs:

```
DES-3028P:4#enable asymmetric_vlan
Command: enable asymmetric_vlan
Success.
DES-3028P:4#
```

disable asymmetric_vlan

Purpose: Used to disable the asymmetric VLAN function on the Switch.
Syntax: `disable asymmetric_vlan`
Description: This command disables the asymmetric VLAN function on the Switch.
Parameters: None.
Restrictions: Only Administrator-level users can issue this command.

Example usage:

To disable asymmetric VLANs:

```
DES-3028P:4#disable asymmetric_vlan
Command: disable asymmetric_vlan
Success.
DES-3028P:4#
```
show asymmetric_vlan

<table>
<thead>

<tr>
<td>show mld_snooping mrouter_ports</td>
<td>{vlan &lt;vlan_name 32&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

### config mld_snooping

**Purpose**

Used to configure MLD snooping on the switch.

**Syntax**

```bash
config mld_snooping [ vlan <vlan_name 32> | vlanid <vlanid_list>|all] { node_timeout <sec 1-16711450> | router_timeout <sec 1-16711450> | done_timer <sec 1-16711450> | state [enable|disable] | fast_done [enable|disable] }
```

**Description**

The `config mld_snooping` command configures MLD snooping on the switch. If the MLD version is configured with a lower version, the higher version's MLD Report/Leave messages will be ignored.

**Parameters**

- `<vlan_name 32>` – The name of the VLAN for which MLD snooping is to be configured.
- `all` – Specifies that all VLANs will be configured.
- `node_timeout` – Specifies the amount of time that must pass before a link node is considered to not be a listener anymore. The default is 260 seconds.
- `router_timeout` – Specifies the maximum amount of time a router will remain in the switch, and can be a listener of a multicast group without the switch receiving a node listener report. The default is 260 seconds.
- `done_timer` – Specifies the maximum amount of time a group will remain in the switch after receiving a done message from the group without receiving a node listener report. The default setting is 2 seconds.
- `state` – Allows you to enable or disable the MLD snooping function for
**config mld_snooping**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure ports as router ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config mld_snooping mrouter_ports [&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config mld_snooping mrouter_ports</code> command allows you to designate a range of ports as being connected to multicast-enabled routers. This will ensure that all packets with such a router as its destination will reach the multicast-enabled router—regardless of protocol, etc.</td>
</tr>
</tbody>
</table>
| Parameters | `<vlan_name 32>` – The name of the VLAN on which the router port resides. 
`add | delete` – Specifies to add or delete the router ports. 
`<portlist>` – Specifies a range of ports to be configured. (UnitID:port number) |

**Example usage:**

To set up port range 1-10 to be static router ports:

```
DES-3028P:4# config mld_snooping mrouter_ports
default add 1-10
Command: config mld_snooping mrouter_ports default
add 1-10
Success.
```

```
DES-3028P:4# 
```
**config mld_snooping mrouter_ports_forbidden**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure ports as forbidden router ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config mld_snooping mrouter_ports_forbidden [&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>config mld_snooping mrouter_ports_forbidden</code> command allows you to designate a range of ports as being not connected to multicast-enabled routers. This ensures that the forbidden router port will not propagate routing packets out.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vlan_name 32&gt;</code> – The name of the VLAN on which the router port resides.</td>
</tr>
<tr>
<td></td>
<td>`add</td>
</tr>
<tr>
<td></td>
<td><code>&lt;portlist&gt;</code> – Specifies a range of ports to be configured. (UnitID:port number)</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To set up port range 1-10 to forbidden router ports:

```
DES-3028P:4# config mld_snooping mrouter_ports_forbidden default add 1-10
Command: config mld_snooping mrouter_ports_forbidden default add 1-10
Success.
DES-3028P:4#
```

**enable mld_snooping**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to enable MLD snooping on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>enable mld_snooping</code></td>
</tr>
<tr>
<td>Description</td>
<td>The <code>enable mld_snooping</code> command allows you to enable MLD snooping on the switch. The switch will forward all multicast traffic to the multicast router, only. Otherwise, the switch forwards all multicast traffic to any IPv6 router.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To enable MLD snooping on the switch:

```
DES-3028P:4# enable mld_snooping
Command: enable mld_snooping
Success.
DES-3028P:4#
```
disable mld_snooping

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to disable MLD snooping on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>disable mld_snooping</td>
</tr>
<tr>
<td>Description</td>
<td>The disable mld_snooping command disables MLD snooping on the switch. Disabling MLD snooping allows all MLD and IPv6 multicast traffic to flood within a given IPv6 interface by default.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To disable MLD snooping on the switch:

```
DES-3028P:4# disable mld_snooping
Command: disable mld_snooping
Success.
DES-3028P:4#
```

show mld_snooping

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show the current status of MLD snooping on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show mld_snooping {vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The show mld_snooping will display the current MLD snooping configuration on the switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>&lt;vlan_name 32&gt; – The name of the VLAN for which you want to view the MLD snooping configuration. If no parameter specified, the system will display all current MLD snooping configuration.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To show mld_snooping:
show mld_snooping group

Purpose
Used to display the current MLD snooping group configuration on the switch.

Syntax
show mld_snooping group {vlan <vlan_name 32>| vlanid <vlanid_list>}

Description
The show mld_snooping group displays the current MLD snooping group configuration on the switch.

Parameters
<vlan_name 32> – The name of the VLAN for which you want to view MLD snooping group configuration information.
If no parameter specified, the system will display all current MLD group snooping configuration of the switch.

Restrictions
Only Administrator-level users can issue this command.

Example usage:
To show MLD snooping group:

```
DES-3028P:4#show mld_snooping group
Command: show mld_snooping group

Source/Group    : 2000::100:10:10:5/FF0E::100:0:0:20
VLAN Name/VID   : default/1
Member Ports    : 1-2
Filter Mode     : INCLUDE

Source/Group    : 2000::100:10:10:5/FF0E::100:0:0:20
VLAN Name/VID   : default/1
Member Ports    : 3
Filter Mode     : EXCLUDE

Source/Group    : NULL/FF0E::100:0:0:21
VLAN Name/VID   : default/1
Member Ports    : 4-5
Filter Mode     : EXCLUDE

DES-3028P:4#
```

**show mld_snooping mrouter_ports**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the currently configured router ports on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show mld_snooping mrouter_ports {vlan &lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show mld_snooping mrouter_ports</code> command displays the currently configured router ports on the switch.</td>
</tr>
</tbody>
</table>
| Parameters           | `<vlan_name 32>` – The name of the VLAN on which the router port resides.  
                        static – Displays router ports that have been statically configured.  
                        dynamic – Displays router ports that have been dynamically configured.  
                        forbidden – Displays forbidden router ports that have been statically configured.  
                        If no parameter specified, the system will display all currently configured router ports on the switch. |
| Restrictions         | None.                                                               |

Example usage:

To display the router ports:
```plaintext
DES-3028P:4# show mld_snooping mrouter_ports
Command: show mld_snooping mrouter_ports

<table>
<thead>
<tr>
<th>VLAN Name</th>
<th>Static mrouter port</th>

IGMP SNOOPING MULTICAST VLAN COMMANDS

The IGMP Snooping Multicast VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create igmp_snooping multicast_vlan</td>
<td>&lt;vlan_name 32&gt; &lt;vlanid 2-4094&gt;</td>
</tr>
<tr>
<td>config igmp_snooping multicast_vlan</td>
<td>&lt;vlan_name 32&gt; {[add</td>
</tr>
<tr>
<td>config igmp_snooping multicast_vlan_group</td>
<td>&lt;vlan_name 32&gt; [ add &lt;mcast_address_list&gt;</td>
</tr>
<tr>
<td>show igmp_snooping multicast_vlan_group</td>
<td>{&lt; vlan_name 32&gt; }</td>
</tr>
<tr>
<td>delete igmp_snooping multicast_vlan</td>
<td>&lt;vlan_name 32&gt;</td>
</tr>
<tr>
<td>enable igmp_snooping multicast_vlan</td>
<td></td>
</tr>
<tr>
<td>disable igmp_snooping multicast_vlan</td>
<td></td>
</tr>
<tr>
<td>show igmp_snooping multicast_vlan</td>
<td>{&lt;vlan_name 32&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create igmp_snooping multicast_vlan**

**Purpose**
Used to create a multicast VLAN

**Syntax**
create igmp_snooping multicast_vlan <vlan_name 32> <vlanid 2-4094>

**Description**
The create igmp_snooping multicast_vlan command will create a multicast_vlan. Multiple multicast VLAN can be configured.

The ISM VLAN being created can not exist in the 1Q VLAN database. Multiple ISM VLAN can be created. The ISM VLAN snooping function co-exist with the 1Q VLAN snooping function.

**Parameters**
- `<vlan_name>` – The name of the VLAN to be created. Each multicast VLAN is given a name that can be up to 32 characters.
- `<vlanid>` – The VLAN ID of the multicast VLAN to be create. The range is 2-4094

**Restrictions**
Only Administrator-level users can issue this command.
Example usage:

To create IGMP snoop multicast VLAN mv12:

```
DES-3028P:4# create igmp_snoop multicast_vlan mv1 2
Command: create igmp_snoop multicast_vlan mv1 2
Success.
```

```
config igmp_snooping multicast_vlan

Purpose
Used to configure the parameter of the specific multicast VLAN.

Syntax
config igmp_snooping multicast_vlan <vlan_name 32> {{[add|delete] [member_port <portlist>| tag_member_port <portlist> | source_port <portlist>] | state [enable | disable] | replace_source_ip [<ipaddr>|none]}}

Description
The config igmp_snooping multicast_vlan command allows you to add a member port, add a tag member port, and add a source port to the port list. The member port will automatically become the untagged member of the multicast VLAN, the tag member port and the source port will automatically become the tagged member of the multicast VLAN. To change the port list, the new port list will replace the previous port list if the add or delete is not specified.

The member port list and source port list can not overlap. However, the member port of one multicast VLAN can overlap with another multicast VLAN.

The multicast VLAN must be created first before configuration.

Parameters
- `<vlan_name>` – The name of the VLAN to be created. Each multicast VLAN is given a name that can be up to 32 characters.
- `member_port <portlist>` – A range of member ports to add to the multicast VLAN. They will become the untagged member port of the ISM VLAN.
- `tag_member_port <portlist>` – Specifies the tagged member port of the ISM VLAN.
- `source_port <portlist>` – A range of source ports to add to the multicast VLAN.
- `state` - enable or disable multicast VLAN for the chosen VLAN.
- `replace_source_ip` – With the IGMP snooping function, the IGMP report packet sent by the host will be forwarded to the source port. Before the forwarding of the packet, the source IP address in the join packet needs to replaced by this IP address. If none is specified the source IP address will not be replaced.
- `none` – Specifies that the source IP address will not be replaced.

Restrictions
Only Administrator-level users can issue this command.

Example usage:

To configure an IGMP snoop multicast VLAN:

```
DES-3028P:4# config igmp_snooping multicast_vlan v1 add member_port 1,3 state enable
Command: config igmp_snooping multicast_vlan v1 add member_port 1,3 state enable
Success.
```
### config igmp_snooping multicast_vlan_group

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the multicast group which will be learned with the specific multicast VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`&lt;vlan_name 32&gt; [ add &lt;mcast_address_list&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>Used to configure the multicast group which will be learned with the specific multicast VLAN. There are two cases need to be considered. The join packet will be learned with the multicast VLAN that contain the destination multicast group. If the destination multicast group of the join packet can not be classified into any multicast VLAN that this port belong, then the join packet will be learned with the natural VLAN of the packet.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vlan_name 32&gt;</code> – The name of the multicast VLAN to be configured, each multicast VLAN is given a name that can be up to 32 characters.</td>
</tr>
<tr>
<td></td>
<td><code>&lt;mcast_address_list&gt;</code> – The list of multicast groups that will be learned with the specified multicast VLAN.</td>
</tr>
<tr>
<td></td>
<td><code>all</code> – All multicast groups will be selected from the specified multicast VLAN.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To add a group to a multicast VLAN:

```plaintext
DES-3028P:4# config igmp_snooping multicast_vlan_group v1 add 225.1.1.1
Command: config igmp_snooping multicast_vlan_group v1 add 225.1.1.1
Success.
DES-3028P:4#
```

### show igmp_snooping multicast_vlan_group

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the multicast groups configured for the specified multicast VLAN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show igmp_snooping multicast_vlan_group {&lt;vlan_name 32&gt; }</code></td>
</tr>
<tr>
<td>Description</td>
<td>Used to display the multicast groups configured for the specified multicast VLAN.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;vlan_name 32&gt;</code> – The name of the multicast VLAN to be configured, each multicast VLAN is given a name that can be up to 32 characters.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To display the multicast groups configured for a multicast VLAN.
**delete igmp_snooping multicast_vlan**

**Purpose**
Used to delete a multicast VLAN.

**Syntax**
```
delete igmp_snooping multicast_vlan <vlan_name 32>
```

**Description**
The delete igmp_snooping multicast_vlan command allows you to delete multicast_vlan.

**Parameters**
- `<vlan_name 32>` – The name of the multicast VLAN to be deleted.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To delete an IGMP snoop multicast VLAN:

```
DES-3028P:4# delete igmp_snooping multicast_vlan v1
Command: delete igmp_snooping multicast_vlan v1
Success.
DES-3028P:4#
```

**enable igmp_snooping multicast_vlan**

**Purpose**
Used to enable the multicast VLAN function.

**Syntax**
```
enable igmp_snooping multicast_vlan
```

**Description**
This command controls the multicast VLAN function. The ISM VLAN will take effect when igmp snooping multicast_vlan is enabled. By default, the multicast VLAN is in a disabled state.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To enable IGMP snoop multicast VLAN:

```
DES-3028P:4# enable igmp_snooping multicast_vlan
Command: enable igmp_snooping multicast_vlan
Success.
DES-3028P:4#
```
disable igmp_snooping multicast_vlan

Purpose  Used to disable the multicast VLAN function.
Syntax  
| disable igmp_snooping multicast_vlan |
Description  This command controls the multicast VLAN function. The ISM VLAN will take effect when igmp snooping multicast vlan is enabled. By default, the multicast VLAN is in a disabled state.
Parameters  None.
Restrictions  Only Administrator-level users can issue this command.

Example usage:
To disable IGMP snoop multicast VLAN:

DES-3028P:4# disable igmp_snooping multicast_vlan
Command: disable igmp_snooping multicast_vlan
Success.
DES-3028P:4#

show igmp_snooping multicast_vlan

Purpose  Used to show the information of multicast VLAN.
Syntax  show igmp_snooping multicast_vlan {<vlan_name 32>}
Description  The show igmp_snooping multicast_vlan command allows you to show the information of multicast VLAN.
Parameters  <vlan_name 32> – The name of the multicast VLAN to be shown.
Restrictions  None.

Example usage:
To display IGMP snoop multicast VLAN:

DES-3028P:4# show igmp_snooping multicast_vlan
Command: show igmp_snooping multicast_vlan

<table>
<thead>
<tr>
<th>VLAN Name</th>
<th>VID</th>
<th>Member( Untagged ) Ports</th>
<th>Tagged Member Ports</th>
<th>Source Ports</th>
<th>Status</th>
<th>Replace Source IP</th>
</tr>
</thead>
<tbody>
<tr>
<td>mv1</td>
<td>2</td>
<td>1,3</td>
<td>2</td>
<td>4</td>
<td>Enabled</td>
<td>0.0.0.0</td>
</tr>
</tbody>
</table>

DES-3028P:4#
LIMITED IP MULTICAST ADDRESS COMMANDS

The Limited IP Multicast Address command allows the administrator to permit or deny access to a port or range of ports by specifying a range of multicast addresses. The limited IP multicast address commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create mcast_filter_profile</td>
<td>profile_id &lt;value 1-24&gt; profile_name &lt;name 1-32&gt;</td>
</tr>
<tr>
<td>config mcast_filter_profile</td>
<td>[profile_id &lt; value 1-24&gt;</td>
</tr>
<tr>
<td>delete mcast_filter_profile</td>
<td>[profile_id [&lt;value 1-24&gt;</td>
</tr>
<tr>
<td>delete mcast_filter_profile</td>
<td>profile_name &lt;name 1-32&gt;</td>
</tr>
<tr>
<td>show mcast_filter_profile</td>
<td>{ [profile_id &lt;value 1-24</td>
</tr>
<tr>
<td>config limited_multicast_addr</td>
<td>&lt;portlist&gt; {[add</td>
</tr>
<tr>
<td>show limited_multicast_addr</td>
<td>&lt;portlist&gt;</td>
</tr>
<tr>
<td>config max_mcast_group port</td>
<td>&lt;portlist&gt; max_group [&lt;value 1-256&gt;]</td>
</tr>
<tr>
<td>show max_mcast_group ports</td>
<td>{ &lt;portlist&gt;}</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**create mcast_filter_profile profile_id**

**Purpose**
This command creates a multicast address profile.

**Syntax**
create mcast_filter_profile profile_id <value 1-24> profile_name <name 1-32>

**Description**
This command creates a multicast address profile. Multiple ranges of multicast addresses can be defined in the profile.

**Parameters**
- profile_id – ID of the profile. Range is 1 to 24.
- profile_name – Provides a meaningful description for the profile

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To create an mcast filter profile:

DES-3028P:4# create mcast_filter_profile profile_id 2 profile_name MOD
Command: create mcast_filter_profile profile_id 2 profile_name MOD
Success.
DES-3028P:4#
**config mcast_filter_profile**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command configures a multicast addresses profile.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config mcast_filter_profile [profile_id &lt; value 1-24&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command is used to configure the multicast filter profiles.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>profile_id</code> – ID of the profile.</td>
</tr>
<tr>
<td></td>
<td><code>profile_name</code> – Provides a meaningful description for the profile.</td>
</tr>
<tr>
<td></td>
<td><code>&lt;mcast_address_list&gt;</code> – List of the multicast addresses to be put in the profile.</td>
</tr>
<tr>
<td></td>
<td>You can either specify a single multicast IP address or a range of multicast addresses.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure an mcast filter profile:

DES-3028P:4# config mcast_filter_profile profile_id 2 add 225.1.1.1 - 225.1.1.1
Command: config mcast_filter_profile profile_id 2 add 225.1.1.1 - 225.1.1.1
Success.

DES-3028P:4#

**delete mcast_filter_profile**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command deletes a multicast address profile.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`delete mcast_filter_profile profile_id [value 1-24]</td>
</tr>
<tr>
<td>Description</td>
<td>This command deletes a multicast address profile</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>profile_id</code> – ID of the profile</td>
</tr>
<tr>
<td></td>
<td><code>all</code> – All multicast address profiles will be deleted.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To delete a multicast address profile:

DES-3028P:4# delete mcast_filter_profile profile_id 3
Command: delete mcast_filter_profile profile_id 3
Success.

DES-3028P:4#
**delete mcast_filter_profile**

<table>
<thead>
<tr>
<th>Description</th>
<th>This command deletes a multicast address profile.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Parameters</td>
<td><em>profile_name</em> – Name of the profile.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage:**

To delete a multicast address profile by name:

```
DES-3028P:4# delete mcast_filter_profile profile_name rg
Command: delete mcast_filter_profile profile_name rg
Success.
DES-3028P:4#
```

**show mcast_filter_profile**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command displays the defined multicast address profiles.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show mcast_filter_profile { [profile_id &lt;value 1-24&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This command displays the defined multicast address profiles.</td>
</tr>
<tr>
<td>Parameters</td>
<td><em>profile_id</em> – ID of the profile.</td>
</tr>
<tr>
<td></td>
<td><em>profile_name</em> – Name of the profile</td>
</tr>
<tr>
<td></td>
<td>If not specified, all profiles will be displayed.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To display the mcast filter profile:

```
DES-3028P:4# show mcast_filter_profile
Command: show mcast_filter_profile

<table>
<thead>
<tr>
<th>Profile ID</th>
<th>Name</th>
<th>Multicast Addresses</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>MOD</td>
<td>234.1.1.1 - 238.244.244.244</td>
</tr>
<tr>

<td></td>
<td>234.1.1.1 - 238.244.244.244</td>
</tr>
<tr>
<td>2</td>
<td>customer</td>
<td>224.19.62.34 - 224.19.162.200</td>
</tr>
</tbody>
</table>

Total Entries : 2

DES-3028P:4#
```
### config limited_multicast_addr ports

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the multicast address filtering function on a port.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config limited_multicast_addr ports &lt;portlist&gt; {[add</td>
</tr>
<tr>
<td>Description</td>
<td>Used to configure the multicast address filtering function on a port. When there are no profiles specified with a port, the limited function is not effective. When the function is configured on a port, it limits the multicast group operated by the IGMP or MLD snooping function and layer 3 function.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – A range of ports to config the multicast address filtering function. <code>add</code> – Add a multicast address profile to a port. <code>delete</code> – Delete a multicast address profile to a port. <code>profile_id</code> – A profile to be added to or deleted from the port.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To configure ports 1,3 to set the multicast address profile 2:

```
DES-3028P:4# config limited_multicast_addr ports 1,3 add profile_id 2
Command: config limited_multicast_addr ports 1,3 add profile_id 2
Success.
DES-3028P:4#
```

### show limited multicast address

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to show per-port Limited IP multicast address range.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show limited_multicast_addr { ports &lt;portlist&gt; }</code></td>
</tr>
<tr>
<td>Description</td>
<td>The show limited multicast address command allows you to show multicast address ranges by ports. When the function is configured on a port, it limits the multicast groups operated by the IGMP or MLD snooping function and layer 3 function.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – A range of ports to show the limited multicast address configuration.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

Example usage:

To display the limited multicast address range:

```
DES-3028P:4#show limited_multicast_addr ports 1,3
Command: show limited_multicast_addr ports 1,3

Max Multicast Filter Group:

Port: 1
Profile Id:
```
Port: 3
Profile Id:

DES-3028P:4#

<table>
<thead>
<tr>
<th>config max_mcast_group</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td><strong>Syntax</strong></td>
</tr>
<tr>
<td><strong>Description</strong></td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
</tr>
</tbody>
</table>

Example usage:

To configure the maximum number of multicast groups that a port can join:

DES-3028P:4#config max_mcast_group ports 1, 3 max_group 100
Command: config max_mcast_group ports 1, 3 max_group 100
Success.

DES-3028P:4#

<table>
<thead>
<tr>
<th>show max_mcast_group</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td><strong>Syntax</strong></td>
</tr>
<tr>
<td><strong>Description</strong></td>
</tr>
<tr>
<td><strong>Parameters</strong></td>
</tr>
<tr>
<td><strong>Restrictions</strong></td>
</tr>
</tbody>
</table>

Example usage:

To display the max number of multicast groups:

DES-3028P:4#show max_mcast_group ports 1
Command: show max_mcast_group ports 1

Max Multicast Filter Group:

<table>
<thead>
<tr>
<th>Port</th>
<th>MaxMcastGroup</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>256</td>
</tr>
</tbody>
</table>

DES-3028P:4#
The LLDP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>enable llfp</td>
<td></td>
</tr>
<tr>
<td>disable llfp</td>
<td></td>
</tr>
<tr>
<td>config llfp</td>

</table>
Each command is listed, in detail, in the following sections.

### enable lldp

**Purpose**
Used to enable LLDP operations on the switch.

**Syntax**
```
enable lldp
```

**Description**
This is a global control for the LLDP function. When this function is enabled, the switch can start to transmit LLDP packets and receive and process the LLDP packets. The specific function of each port will depend on the per port LLDP setting. For the advertisement of LLDP packets, the switch announces the information to its neighbor through ports. For the receiving of LLDP packets, the switch will learn the information from the LLDP packets advertised from the neighbor in the neighbor table.

The default state for LLDP is disabled.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage**
To enable LLDP:
```
DES-3028P:4# enable lldp
Command: enable lldp
Success.
DES-3028P:4#
```

### disable lldp

**Purpose**
Used to disable LLDP operation on the switch.

**Syntax**
```
disable lldp
```

**Description**
The switch will stop sending and receiving of LLDP advertisement packets.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage**
To disable LLDP:
```
DES-3028P:4# disable lldp
Command: disable lldp
Success.
DES-3028P:4#
```

### config lldp message_tx_interval

**Purpose**
Used to change the packet transmission interval.

**Syntax**
```
config lldp message_tx_interval <sec 5 - 32768>
```

**Description**
This interval controls how often active ports retransmit advertisements to their neighbors.

**Parameters**
- `message_tx_interval` - Changes the interval between consecutive

### config lldp message_tx_interval

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command is used to configure the message tx interval.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config lldp message tx interval &lt; int 5 - 32768 &gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This parameter sets the time interval for transmissions of LLDP advertisements on any given port. The range is from 5 to 32768 seconds. The default setting is 30 seconds.</td>
</tr>
<tr>
<td>Parameters</td>
<td>message tx interval – The range is from 5 to 32768 seconds. The default setting is 30 seconds.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage

To change the packet transmission interval:

```
DES-3028P:4# config lldp message tx interval 30
Command: config lldp message_tx_interval 30
Success.
DES-3028P:4#
```

### config lldp message_tx_hold_multiplier

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command is used to configure the message hold multiplier.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config lldp message tx hold multiplier &lt; int 2 - 10 &gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This parameter sets the message hold multiplier on the time interval for transmitting LLDP advertisements. The range is from 2 to 10. The default setting is 4.</td>
</tr>
<tr>
<td>Parameters</td>
<td>message tx hold multiplier – The range is from 2 to 10. The default setting is 4.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage

To change the multiplier value:

```
DES-3028P:4# config lldp message tx hold multiplier 3
Command: config lldp message txhold multiplier 3
Success.
DES-3028P:4#
```

### config lldp tx_delay

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to change the minimum time (delay-interval) of any LLDP port. It will delay advertising successive LLDP advertisements due to a change in LLDP MIB content. The tx_delay defines the minimum interval between the sending of LLDP messages due to constant changes of MIB content.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config lldp tx delay &lt; sec 1–8192 &gt;</td>
</tr>
<tr>
<td>Description</td>
<td>The LLDP message tx interval (transmit interval) must be greater than or equal to (4 x tx_delay interval).</td>
</tr>
<tr>
<td>Parameters</td>
<td>tx_delay – The range is from 1 second to 8192 seconds. The default setting is 2 seconds.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Note: txDelay should be less than or equal to 0.25 * msgTxInterval
Example usage

To configure the delay-interval interval:

```
DES-3028P:4# config lldp tx_delay 8
Command: config lldp tx_delay 8
Success.
DES-3028P:4#
```

**config lldp reinit_delay**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Change the minimum time of reinitialization delay interval.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config lldp reinit_delay &lt; sec 1 – 10 &gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>An re-enabled LLDP port will wait for reinit_delay after last disable command before reinitializing</td>
</tr>
<tr>
<td>Parameters</td>
<td>reinit_delay – The range is from 1 second to 10 seconds. The default setting 2 seconds.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage

To change the re-initialization delay interval:

```
DES-3028P:4# config lldp reinit_delay 5
Command: config lldp reinit_delay 5
Success.
DES-3028P:4#
```

**config lldp notification_interval**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure the timer of the notification interval used to send notifications to configured SNMP trap receiver(s).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>config lldp notification_interval &lt;sec 5 - 3600 &gt;</code></td>
</tr>
<tr>
<td>Description</td>
<td>Globally change the interval between successive LLDP change notifications generated by the switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>notification_interval – The range is from 5 second to 3600 seconds. The default setting is 5 seconds.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>
Example usage

To change the notification interval:

```
DES-3028P:4# config lldp notification_interval 10
Command: config lldp notification_interval 10
Success.
```

```
DES-3028P:4#
```

cfgconfig lldp ports notification

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure each port for sending notifications to configured SNMP trap receiver(s).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config lldp ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>Enable or disable each port for sending change notifications to configured SNMP trap receiver(s) if an LLDP data change is detected in an advertisement received on the port from an LLDP neighbor. The definition of change includes new available information, information timeout and information update. And the changed type includes any data update /insert/remove.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specified a range of ports to be configured.</td>
</tr>
<tr>
<td></td>
<td><code>all</code> – To set all ports in the system, you may use the “all” parameter.</td>
</tr>
<tr>
<td></td>
<td><code>notification</code> – Enables or disables the SNMP trap notification of LLDP data changes detected on advertisements received from neighbor devices. The default notification state is disabled.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage

To change the port SNMP notification state:

```
DES-3028P:4# config lldp ports 1-5 notification enable
Command: config lldp ports 1-5 notification enable
Success.
```

```
DES-3028P:4#
```

cfgconfig lldp admin_status

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure per-port transmit and receive modes.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config lldp ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>These options enable the Switch to control which ports participate in LLDP traffic and whether the participating ports allow LLDP traffic in only one direction or in both directions.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specified a range of ports to be configured.</td>
</tr>
<tr>
<td></td>
<td><code>all</code> – To set all ports in the system, you may use the “all” parameter.</td>
</tr>
<tr>
<td></td>
<td><code>admin_status</code> – To set the admin status.</td>
</tr>
<tr>
<td></td>
<td><code>tx_only</code>: Configure the specified port(s) to transmit LLDP packets, but block inbound LLDP packets from neighbor devices.</td>
</tr>
<tr>
<td></td>
<td><code>rx_only</code>: Configure the specified port(s) to receive LLDP packets from neighbors, but block outbound packets to neighbors.</td>
</tr>
<tr>
<td></td>
<td><code>tx_and_rx</code>: Configure the specified port(s) to both transmit and receive</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>
config lldp admin_status

LLDP packets.

disable: Disable LLDP packet transmit and receive on the specified port(s).

The default per port state is tx_and_rx.

Restrictions Only Administrator-level users can issue this command.

Example usage

To configure the port’s transmit and receive mode:

```
DES-3028P:4# config lldp ports 1-5 admin_status tx_and_rx
Command: config lldp ports 1-5 admin_status tx_and_rx
Success.
DES-3028P:4#
```

config mgt_addr

Purpose Used to enable or disable the port(s) which have been specified for advertising the indicated management address instances.

Syntax `config lldp ports [<portlist>|all] mgt_addr ipv4 <ipaddr> [enable | disable]`

Description This command specifies whether the system’s IP address needs to be advertised from the specified port. For layer 3 devices, each managed address can be individually specified. The management addresses that are added in the list will be advertised in the LLDP from the specified interface associated with each management address. The interface for that management address will be also advertised in the if-index form.

Parameters `<portlist>` – Specified a range of ports to be configured.

`all` – To set all ports in the system, you may use the “all” parameter.

`ipv4` – IP address of IPV4.

Restrictions Only Administrator-level users can issue this command.

Example usage

To enable port 1 to port 2 for manage address entries:

```
DES-3028P:4# config lldp ports 1-2 mgt_addr ipv4 192.168.254.10 enable
Command: config lldp ports 1-2 mgt_addr ipv4 192.168.254.10 enable
Success

DES-3028P:4#
```

config lldp basic_tlvs

Purpose Used to configure an individual port or group of ports to exclude one or more of the optional TLV data types from outbound LLDP advertisements.

Syntax `config lldp ports [<portlist>|all] basic_tlvs [all | {port_description | system_name | system_description | system_capabilities}] [enable | disable]`

Example usage

To enable port 1 to port 2 to exclude system name and system description:

```
DES-3028P:4# config lldp ports 1-2 basic_tlvs system_name|system_description enable
Command: config lldp ports 1-2 basic_tlvs system_name|system_description enable
Success

DES-3028P:4#
```
**config lldp basic_tlvs**

**Description**
An active LLDP port on the switch always includes the mandatory data in its outbound advertisements. And there are four optional data that can be configured for an individual port or group of ports to exclude one or more of these data types from outbound LLDP advertisements. The mandatory data type includes four basic types of information (end of LLDPDU TLV, chassis ID TLV, port ID TLV, Time to Live TLV). The mandatory type can not be disabled. There are also four data types which can be optionally selected. They are port_description, system_name, system_description, and system_capabilities.

**Parameters**
- `<portlist>` – Specified a range of ports to be configured.
- `all` – To set all ports in the system, you may use the “all” parameter.
- `port_description` – This TLV optional data type indicates that LLDP agent should transmit 'Port Description TLV on the port.
  The default state is disabled.
- `system_name` – This TLV optional data type indicates that the LLDP agent should transmit 'System Name TLV'. The default state is disabled.
- `system_description` – This TLV optional data type indicates that the LLDP agent should transmit 'System Description TLV'. The default state is disabled.
- `system_capabilities` – This TLV optional data type indicates that the LLDP agent should transmit 'System Capabilities TLV'. The system capability will indicate whether the device provides repeater, bridge, or router functions, and whether the provided functions are currently enabled. The default state is disabled.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage**
To configure the Switch to exclude the system name TLV from outbound LLDP advertisements on all ports:

```
DES-3028P:4# config lldp ports all basic_tlvs system_name enable
Command: config lldp ports all basic_tlvs system_name enable
Success.
DES-3028P:4#
```

**config lldp dot1_tlv_pvid**

**Purpose**
Used to configure an individual port or group of ports to exclude one or more of IEEE 802.1 Organizationally port vlan ID TLV data types come from outbound LLDP advertisements.

**Syntax**
```
config lldp ports [<portlist>|all] dot1_tlv_pvid [enable | disable]
```

**Description**
This TLV optional data type determines whether the IEEE 802.1 organizationally defined port VLAN TLV transmission is allowed on a given LLDP transmission capable port.

**Parameters**
- `<portlist>` – Specified a range of ports to be configured.
- `all` – To set all ports in the system, you may use the “all” parameter.
- `dot1_tlv_pvid` – This TLV optional data type determines whether the IEEE 802.1 organizationally defined port VLAN ID TLV transmission is allowed on a given LLDP transmission capable port. The default state is disable.

**Restrictions**
Only Administrator-level users can issue this command.
Example usage
To configure the vlan name TLV from the outbound LLDP advertisements for all ports:

```
DES-3028P:4# config lldp ports all dot1_tlv_vlan_name vlanid 1-3 enable
Command: config lldp ports all dot1_tlv_vlan_name vlanid 1-3 enable
Success.
DES-3028P:4#
```

**config lldp dot1_tlv_vlan_name**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure an individual port or group of ports to exclude one or more of the IEEE 802.1 Organizational VLAN name TLV data types from outbound LLDP advertisements.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config lldp ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This TLV optional data type indicates whether the corresponding Local System’s VLAN name instance will be transmitted on the port. If a port is associated with multiple VLANs those enabled VLAN IDs will be advertised.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specified a range of ports to be configured. <code>all</code> – To set all ports in the system, you may use the “all” parameter. <code>dot1_tlv_vlan_name</code> – This TLV optional data type indicates whether the corresponding Local System’s VLAN name instance will be transmitted on the port. If a port is associated with multiple VLANs those enabled VLAN IDs will be advertised. The default state is disable.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage
To configure the VLAN name TLV from the outbound LLDP advertisements for all ports:

```
DES-3028P:4# config lldp ports all dot1_tlv_vlan_name vlanid 1-3 enable
Command: config lldp ports all dot1_tlv_vlan_name vlanid 1-3 enable
Success.
DES-3028P:4#
```

**config lldp dot1_tlv_protocol_identity**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure an individual port or group of ports to exclude one or more of IEEE 802.1 organization protocol identity TLV data types from outbound LLDP advertisements.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`config lldp ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>This TLV optional data type indicates whether the corresponding Local System’s Protocol Identity instance will be transmitted on the port. The Protocol Identity TLV provides a way for stations to advertise protocols that are important to the operation of the network. Such as Spanning Tree Protocol, the Link Aggregation Control Protocol, and numerous vendor proprietary variations which are responsible for maintaining the topology and connectivity of the network. If EAPOL, GVRP, STP(including MSTP), and LACP protocol identity is enabled on this port</td>
</tr>
</tbody>
</table>
config lldp dot1_tlv_protocol_identity

and it is enabled to be advertised, then this protocol identity will be advertised.

Parameters

<portlist> – Specified a range of ports to be configured.

all – To set all ports in the system, you may use the “all” parameter.

dot1_tlv_protocol_identity – This TLV optional data type indicates whether the corresponding Local System’s Protocol Identity instance will be transmitted on the port. The Protocol Identity TLV provides a way for stations to advertise protocols that are important to the operation of the network. Such as Spanning Tree Protocol, the Link Aggregation Control Protocol, and numerous vendor proprietary variations are responsible for maintaining the topology and connectivity of the network. If EAPOL, GVRP, STP(including MSTP), and LACP protocol identity is enabled on this port and it is enabled to be advertised, then this protocol identity will be advertised. The default state is disable.

Restrictions

Only Administrator-level users can issue this command.

Example usage

To configure the protocol identity TLV from the outbound LLDP advertisements for all ports:

DES-3028P:4# config lldp ports all dot1_tlv_protocol_identity all enable
Command: config lldp ports all dot1_tlv_protocol_identity all enable
Success.

DES-3028P:4#

config lldp dot3_tlvs

Purpose

Used to configure an individual port or group of ports to exclude one or more of IEEE 802.3 organization specific TLV data types from outbound LLDP advertisements.

Syntax

config lldp ports [<portlist>|all] dot3_tlvs [all | {mac_phy_configuration_status | link_aggregation | power_via_mdi | maximum_frame_size}] [enable | disable]

Description

Each Specific TLV in this extension can be enabled individually.

Parameters

<portlist> – Specified a range of ports to be configured.

all – To set all ports in the system, you may use the “all” parameter.

mac_phy_configuration_status – This TLV optional data type indicates that LLDP agent should transmit 'MAC/PHY configuration/status TLV'. This type indicates it is possible for two ends of an IEEE 802.3 link to be configured with different duplex and/or speed settings and still establish some limited network connectivity. More precisely, the information includes whether the port support the auto-negotiation function, whether the function is enabled, the auto-negotiated advertised capability, and the operational MAU type. The default state is disable.

link_aggregation – This TLV optional data type indicates that LLDP agent should transmit 'Link Aggregation TLV'. This type indicates the current link aggregation status of IEEE 802.3 MACs. More precisely, the information should include whether the port is capable of doing link aggregation, whether the port is aggregated in a aggregated link, and the aggregated port ID. The default state is disable.

maximum_frame_size – This TLV optional data type indicates that LLDP agent should transmit 'Maximum-frame-size TLV'. The default state is
### config lldp dot3_tlvs

<table>
<thead>
<tr>
<th>disable</th>
</tr>
</thead>
</table>

**Restrictions** Only Administrator-level users can issue this command.

**Example usage**

To configure the MAC/PHY configuration/status TLV from the outbound LLDP advertisements for all ports:

```
DES-3028P:4# config lldp ports all dot3_tlvs
mac_phy_configuration_status enable
Command: config lldp ports all dot3_tlvs
mac_phy_configuration_status enable
Success.
DES-3028P:4#
```

### config lldp forward_message

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure forwarding of lldpdu packet when LLDP is disabled.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config lldp forward_message [enable</td>
</tr>
<tr>
<td>Description</td>
<td>When lldp is disabled and lldp forward_message is enabled, the received LLDPDU packet will be forwarded. The default state is disable.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

**Example usage**

To configure the LLDP forward_lldpdu:

```
DES-3028P:4# config lldp forward_message enable
Command: config lldp forward_message enable
Success.
DES-3028P:4#
```

### show lldp

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This command displays the switch’s general LLDP configuration status.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>show lldp</td>
</tr>
<tr>

  Tx Delay          : 2
  Notification Interval: 5
```

```
show lldp mgt_addr
Purpose Used to display the Ildp management address information.
Syntax show lldp mgt_addr {ipv4 <ipaddr>}
Description Displays the Ildp management address information.
Parameters ipv4 – IP address of IPV4.
Restrictions None.
```

Example usage

To display the management address information:

```
DES-3028P:4# show lldp mgt_addr ipv4 192.168.254.10
Command: show lldp mgt_addr ipv4 192.168.254.10

Address 1:

DES-3028P:4#
### show lldp ports

**Purpose**
Display the LLDP per port configuration for advertisement options.

**Syntax**
```
show lldp ports {<portlist> }
```

**Description**
This command displays the LLDP per port configuration for advertisement options.

**Parameters**
- `<portlist>` – Specifies a range of ports to be displayed. When port list is not specified, information for all ports will be displayed.

**Restrictions**
None.

**Example usage**
To display the LLDP per port TLV option configuration:

```
DES-3028P:4# show lldp ports 1
Command: show lldp ports 1

Port ID                             : 1
----------------------------------------------------------------------
Admin Status                        : TX_and_RX

DES-3028P:4#
```

### show lldp local_ports

**Purpose**
Used to display the per-port information currently available for populating outbound LLDP advertisements.

**Syntax**
```
show lldp local_ports {<portlist>} {mode [brief | normal | detailed]}
```

**Description**
This command displays the per-port information currently available for populating outbound LLDP advertisements.

**Parameters**
- `<portlist>` – Specified a range of ports to be configured. When a port list is not specified, information for all ports will be displayed.
  - `brief` – Display the information in brief mode.
  - `normal` – Display the information in normal mode. This is the default display mode.
  - `detailed` – Display the information in detailed mode.
show lldp local_ports

Restrictions  None.

Example usage

To display outbound LLDP advertisements for individual ports in detail:

DES-3028P:4# show lldp local_ports 1 mode detailed
Command: show lldp local_ports 1 mode detailed

Port ID : 1

DES-3028P:4#

To display outbound LLDP advertisements for specific ports in brief mode:

show lldp local_ports 1 mode brief

Command: show lldp local_ports 1 mode brief

Port ID : 1
---------------------------------------------------------
Port Id Subtype                               : LOCAL
Port Id                                    : 1/1
Port Description                           : RMON Port 1 on Unit 1

DES-3028P:4#

show lldp remote_ports

Purpose          Used to display the information learned from the neighbor.
Syntax           show lldp remote_ports {<portlist>} {mode [brief | normal |
detailed]}
Description      This command displays information learnt from the neighbor parameters.
                  Due to the memory limitations, the switch can only receive 32 VLAN
                  Name entries and 10 Management Address entries.
Parameters       <portlist> – Specified a range of ports to be configured. When a port list
                  is not specified, information for all ports will be displayed.
                  brief – Display the information in brief mode.
                  normal – Display the information in normal mode. This is the default
                  display mode.
                  detailed – Display the information in detailed mode.
Restrictions     None.
Example usage

To display remote table entries in brief mode:

```bash
DES-3028P:4# show lldp remote_ports 1-2 mode brief
```

show lldp statistics

Purpose: Used to display the system LLDP statistics information.

Syntax: show lldp statistics

Description: The global LLDP statistics displays an overview of neighbor detection activity on the switch.

Parameters: None.

Restrictions: None.

Example usage:
To display global statistics information:

```
DES-3028P:4# show lldp statistics
Command: show lldp statistics

Last Change Time           : 6094
Number of Table Insert     : 1
Number of Table Delete     : 0
Number of Table Drop       : 0
Number of Table Ageout     : 0
```

show lldp statistics ports

Purpose: Used to display the ports LLDP statistics information.

Syntax: show lldp statistics ports{<portlist>}

Description: The per-port LLDP statistics command displays per-port LLDP statistics.

Parameters: 
- `<portlist>` – Specified a range of ports to be configured. When a port list is not specified, information for all ports will be displayed.

Restrictions: None.
Example usage

To display statistics information of port 1:

```
DES-3028P:4# show lldp statistics ports 1
Command: show lldp statistics ports 1

Port ID: 1

<table>

DOS PREVENTION COMMANDS

The DoS Prevention commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config dos_prevention dos_type</td>
<td>{ { land_attack</td>
</tr>
<tr>
<td>show dos_prevention { land_attack</td>
<td>blat_attack</td>
</tr>
<tr>
<td>clear dos_prevention counters</td>
<td>{ land_attack</td>
</tr>
<tr>
<td>enable dos_prevention trap_log</td>
<td></td>
</tr>
<tr>
<td>disable dos_prevention trap_log</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config dos_prevention dos_type**

Purpose

This command is used to discard the L3 control packets sent to CPU from specific ports.

Syntax

```
config dos_prevention dos_type
```

Description

This command configures the prevention of each DoS attack, and includes state and action. The packets matching will be used by the hardware. For a specific type of attack, the content of the packet, regardless of the receipt port or destination port, will be matched against a specific pattern.

Parameters

- `dos` – The type of DoS attack. Possible values are as follows:
  - `land_attack`
  - `blat_attack`
  - `smurf_attack`
  - `tcp_null_scan`
  - `tcp_xmascan`
  - `tcp_synfin`
  - `tcp_syn_srcport_less_1024`
- `state` – Used to enable or disable DoS prevention.
  - By default, prevention for all types of DOS is enabled, except for `tcp_syn_srcport_less_1024`.
  - `action` – When enabling DoS prevention, the following actions can be taken.
    - `drop` – drop the attack packets
    - `mirror` – mirror the packet to other port for further process.
**config dos_prevention dos_type**

| **priority** | change packet priority by the switch from 0 – 7  
|--------------|--------------------------------------------------|
|             | If the priority is not specified, the original priority will be used.  
| **rx_rate**  | controls the rate of the received DoS attack packets.  
|             | If not specified, the default action is drop.  

Restrictions: Only Administrator-level users can issue this command.

Example usage

To configure a land attack and blat attack prevention:

```
DES-3028P:4# config dos_prevention dos_type land_attack  
blat_attack state enable action drop  
Command: config dos_prevention dos_type land_attack blat_attack  
state enable action drop  
Success.  
DES-3028P:4#
```

**enable dos_prevention trap_log**

| Purpose          | Used to enable dos_prevention trap/log.  
|------------------|----------------------------------------|
| Syntax           | `enable dos_prevention trap_log`  
| Description      | This command is used to send traps and logs when a DoS attack event occurs. The event will be logged only when the action is specified as drop.  
| Parameters       | None.  
| Restrictions     | Only Administrator-level users can issue this command.  

Example usage

To enable dos_prevention trap_log:

```
DES-3028P:4# enable dos_prevention trap_log  
Command: enable dos_prevention trap_log  
Success.  
DES-3028P:4#
```

**disable dos_prevention trap_log**

| Purpose          | Used to disable dos_prevention trap/log.  
|------------------|----------------------------------------|
| Syntax           | `disable dos_prevention trap_log`  
| Description      | This command is used to disable the dos prevention trap log.  
| Parameters       | None.  
| Restrictions     | Only Administrator-level users can issue this command.  

Example usage

To disable dos_prevention trap_log:

```
DES-3028P:4# disable dos_prevention trap_log
Command: disable dos_prevention trap_log
Success.
DES-3028P:4#
```

### show dos_prevention

<table>
<thead>
<tr>
<th>Purpose</th>
<th>-used to display DoS prevention information.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show dos_prevention { land_attack</td>
</tr>
<tr>
<td>Description</td>
<td>The <code>show dos_prevention</code> command displays DoS prevention information, includes the type of DoS attack, the prevention state, the corresponding action if the prevention is enabled and the counter information of the DoS packet.</td>
</tr>
</tbody>
</table>
| Parameters | `dos` – The type of DoS attack. Possible values are as follows:

- land_attack
- blat_attack
- smurf_attack
- tcp_null_scan
- tcp_xmascan
- tcp_synfin
- tcp_syn_srcport_less_1024 |
| Restrictions | Only Administrator-level users can issue this command. |
Example usage

To display DoS prevention information:

```
DES-3028P:4# show dos_prevention
Command: show dos_prevention
Trap/Log : Enabled

<table>
<thead>
<tr>
<th>DoS Type</th>
<th>State</th>
<th>Action</th>
<th>Frame Counts</th>
</tr>
</thead>
<tbody>
<tr>
<td>Land Attack</td>
<td>Disabled</td>
<td>Drop</td>
<td>0</td>
</tr>
<tr>
<td>Blat Attack</td>
<td>Enabled</td>
<td>Drop</td>
<td>123</td>
</tr>
<tr>
<td>Smurf Attack</td>
<td>Enabled</td>
<td>Mirror</td>
<td>1500</td>
</tr>
<tr>
<td>TCP Null Scan</td>
<td>Enabled</td>
<td>Drop</td>
<td>100000</td>
</tr>
<tr>
<td>TCP Xmascan</td>
<td>Disabled</td>
<td>Drop</td>
<td>0</td>
</tr>
<tr>
<td>TCP SYNFIN</td>
<td>Enabled</td>
<td>Mirror</td>
<td>1245678</td>
</tr>
<tr>
<td>TCP SYN SrcPort Less Than 1024</td>
<td>Enabled</td>
<td>Mirror</td>
<td>1234567890</td>
</tr>
</tbody>
</table>

DES-3028P:4#
```

To display DoS prevention information for Land Attack:

```
DES-3028P:4# show dos_prevention land_attack
Command: show dos_prevention land_attack

DoS Type: Land Attack
State: Enabled
Action: Mirror
   Port: 7
   Priority: 5
   Rx Rate(Kbit/sec): 1024
Frame Counts: 10000

DES-3028P:4#
```

To display DoS prevention information for Blat Attack:

```
DES-3028P:4# show dos_prevention land_attack
Command: show dos_prevention land_attack

DoS Type: Blat Attack
State: Enabled
Action: MirrorToPort
   Port: 7
   Priority: no_change
   Rx Rate(Kbit/sec): no_limit
Frame Counts: 10500

DES-3028P:4#
```

clear dos_prevention counters

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to clear the counters of the prevention of each DoS attack.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>clear dos_prevention counters { land_attack</td>
</tr>
</tbody>
</table>
clear dos_prevention counters

Description  This command clears the counters of the prevention of each DoS attack.

Parameters  dos – The type of DoS attack. Possible values are as follows:
  • land_attack
  • blat_attack
  • smurf_attack
  • tcp_null_scan
  • tcp_xmascan
  • tcp_synfin
  • tcp_syn_srcport_less_1024

Restrictions  Only Administrator-level users can issue this command.

Example usage

To clear all counters of the prevention of each DoS attack:

DES-3028P:4# clear dos_prevention counters
Command: clear dos_prevention counters
Success.

DES-3028P:4#
IP-MAC-PORT BINDING COMMANDS

The IP network layer uses a four-byte address. The Ethernet link layer uses a six-byte MAC address. Binding these two address types together allows the transmission of data between the layers. The primary purpose of IP-MAC-PORT binding is to restrict the access to a switch to a number of authorized users. Only the authorized client can access the Switch’s port by checking the pair of IP-MAC addresses with the pre-configured database. If an unauthorized user tries to access an IP-MAC-PORT binding enabled port, the system will block the access by dropping its packet. The maximum number of IP-MAC binding entries is dependant on chip capability (e.g. the ARP table size) and storage size of the device. For the DES-3028/28P/28G/52/52P series, the maximum number of IP-MAC-PORT Binding ARP mode is 500. The creation of authorized users can be manually configured by CLI or Web. The function is port-based, meaning a user can enable or disable the function on the individual port.

The IP-MAC-PORT Binding commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>create address_binding ip_mac ipaddress</td>
<td>&lt;ipaddr&gt; mac_address &lt;macaddr&gt; {ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>config address_binding ip_mac ipaddress</td>
<td>&lt;ipaddr&gt; mac_address &lt;macaddr&gt; {ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>config address_binding ip_mac ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config address_binding ip_mac ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>config address_binding ip_mac ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>show address_binding</td>
<td>[ip_mac [{[all</td>
</tr>
<tr>
<td>delete address_binding</td>
<td>[ip-mac [ipaddress &lt;ipaddr&gt; {mac_address &lt;macaddr&gt;} [all]</td>
</tr>
<tr>
<td>enable address_binding trap_log</td>
<td></td>
</tr>
<tr>
<td>disable address_binding trap_log</td>
<td></td>
</tr>
<tr>
<td>show address_binding dhcp_snoop</td>
<td>{[max_entry {ports &lt;portlist&gt;</td>
</tr>
<tr>
<td>enable address_binding dhcp_snoop</td>
<td></td>
</tr>
<tr>
<td>disable address_binding dhcp_snoop</td>
<td></td>
</tr>
<tr>
<td>clear address_binding dhcp_snoop binding_entry</td>
<td>[&lt;portlist&gt;</td>
</tr>
</tbody>
</table>
### Command Parameters

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>ports</td>
<td></td>
</tr>
<tr>
<td>config address_binding</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>dhcp_snoop max_entry ports</td>
<td></td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

#### create address_binding ip_mac ipaddress

**Purpose**

Used to create an IP-MAC Binding entry.

**Syntax**

```
create address_binding ip_mac ipaddress <ipaddr> mac_address <macaddr> {ports [<portlist> | all]}
```

**Description**

This command will create an IP-MAC Binding entry.

**Parameters**

- `<ipaddr>` – The IP address of the device where the IP-MAC binding is made.
- `<macaddr>` – The MAC address of the device where the IP-MAC binding is made.
- `<portlist>` – Specifies a port or range of ports to be configured for address binding.
- `all` – Specifies that all ports on the switch will be configured for address binding.

**Restrictions**

Only Administrator-level users can issue this command.

**Example usage:**

To create address binding on the Switch:

```
DES-3028P:4#create address
_ binding ip_mac ipaddress
10.1.1.3 mac_address 00-00-00-00-00-04
Command: create address binding ip_mac ipaddress 10.1.1.3
mac_address 00-00-00-00-00-04
Success.
```

#### config address Binding ip_mac ipaddress

**Purpose**

Used to configure an IP-MAC Binding entry.

**Syntax**

```
config address_binding ip_mac ipaddress <ipaddr> mac_address <macaddr> {ports [<portlist> | all]}
```

**Description**

This command will configure an IP-MAC Binding entry.

**Parameters**

- `<ipaddr>` – The IP address of the device where the IP-MAC binding is made.
- `<macaddr>` – The MAC address of the device where the IP-MAC binding is made.
- `<portlist>` – Specifies a port or range of ports to be configured for address binding.
- `all` – Specifies that all ports on the switch will be configured for address binding.

**Restrictions**

Only Administrator-level users can issue this command.

**Example usage:**

```
To configure address binding on the Switch:

```
config address_binding ip_mac
ipaddress 10.1.1.3 mac_address 00-00-00-00-00-05
```

Command: config address_binding ip_mac
ipaddress 10.1.1.3 mac_address 00-00-00-00-00-05

Success.

---

**config address_binding ip_mac ports**

**Purpose**
Used to configure an IP-MAC state to enable or disable for specified ports.

**Syntax**
```
config address_binding ip_mac ports [<portlist> | all] state [enable {strict | loose}] | disable]
```

**Description**
This command will configure IP-MAC state to enable or disable for specified ports.

**Parameters**
- `<portlist>` – Specifies a port or range of ports.
- `all` – Specifies all ports on the switch.
- `state [enable | disable]` – Enables or disables the specified range of ports.
- `strict` – This mode provides a stricter way of control. If the user chooses `strict`, all packets will be sent to the CPU, thus all packets will not be forwarded by the hardware until the S/W learns the entries for the port. The port will check ARP packets and IP packets by IP-MAC-PORT Binding entries. The packet is found by the entry, the MAC address will be set to dynamic. If the packet is not found by the entry, the MAC address will be set to block. Other packets will be dropped. The default mode is strict if not specified.
- `loose` – This mode provides a more loose way of control. If the user chooses `loose`, ARP packets and IP Broadcast packets will go to CPU. The packet will still be forwarded by the hardware until a specific source MAC address is blocked by the software. The port will check ARP packets and IP Broadcast packets by IP-MAC-PORT Binding entries. If the packet is found by the entry, the MAC address will be set to dynamic. If the packet is not found by the entry, the MAC address will be set to block. Other packets will be bypassed.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:

To configure address binding on the Switch:

```
config address_binding ip_mac ports 2 state enable
```

Command: config address_binding ip_mac ports 2 state enable

Success.
**config address_binding ip_mac ports**

| Syntax | config address_binding ip_mac ports [<portlist> | all] allow_zeroip [enable|disable] |
|--------|----------------------------------------------------------------------------------|
| Description | This command will configure IP-MAC state to enable or disable for specified ports. |
| Parameters | <portlist> – Specifies a port or range of ports.  
| | all – specifies all ports on the switch.  
| | allow_zeroip [enable | disable] – Enables or disables zero IP address. |
| Restrictions | Only Administrator-level users can issue this command. |

Example usage:

To configure address binding on the Switch:

```
DES-3028P:4#config address_binding ip_mac ports 2  
allow_zeroip enable
Command: config address_binding ip_mac ports 2  
allow_zeroip enable
Success.
DES-3028P:4#
```
show address_binding

Purpose
Used to display IP-MAC Binding entries.

Syntax
[ip_mac all | ipaddress <ipaddr> mac_address <macaddr>] | blocked [all | vlan_name <vlan_name> mac_address <macaddr>] | ports]

Description
This command will display IP-MAC Binding entries. Three different kinds of information can be viewed.
- **ip_mac** – Address Binding entries can be viewed by entering the physical and IP addresses of the device.
- **blocked** – Blocked address binding entries (bindings between VLAN names and MAC addresses) can be viewed by entering the VLAN name and the physical address of the device.
- **ports** – The number of enabled ports on a device.

Parameters
- **all** – For IP_MAC binding, all specifies all the IP-MAC binding entries; for Blocked Address Binding entries, all specifies all the blocked VLANs and their bound physical addresses.
- **<ipaddr>** – The IP address of the device where the IP-MAC binding is made.
- **<macaddr>** – The MAC address of the device where the IP-MAC binding is made.
- **<vlan_name>** – The VLAN name of the VLAN that is bound to a MAC address in order to block a specific device on a known VLAN.

Restrictions
None.

Example usage:

To show IP-MAC Binding on the switch:
show address_binding ip_mac all
Command: show address_binding ip_mac all

<table>
<thead>
<tr>
<th>IP Address</th>

delete address_binding

**Purpose**
Used to delete IP-MAC Binding entries.

**Syntax**
```
delete address_binding ip-mac [ip_address <ipaddr> mac_address <macaddr> | all] | blocked [all | vlan_name <vlan_name> mac_address <macaddr>]]
```

**Description**
This command will delete IP-MAC Binding entries. Two different kinds of information can be deleted.

- **IP_MAC** – Individual Address Binding entries can be deleted by entering the physical and IP addresses of the device. Toggling to `all` will delete all the Address Binding entries.
- **Blocked** – Blocked address binding entries (bindings between VLAN names and MAC addresses) can be deleted by entering the VLAN name and the physical address of the device. To delete all the Blocked Address Binding entries, toggle `all`.

**Parameters**
- `<ipaddr>` – The IP address of the device where the IP-MAC binding is made.
- `<macaddr>` – The MAC address of the device where the IP-MAC binding is made.
- `<vlan_name>` – The VLAN name of the VLAN that is bound to a MAC address in order to block a specific device on a known VLAN.
- `all` – For IP_MAC binding `all` specifies all the IP-MAC binding entries; for Blocked Address Binding entries `all` specifies all the blocked VLANs and their bound physical addresses.

**Restrictions**
Only Administrator-level users can issue this command.

Example usage:
To delete an IP-MAC Binding on the Switch:
### enable address_binding trap_log

**Purpose**
Used to enable the trap log for the IP-MAC binding function.

**Syntax**
```
enable address_binding trap_log
```

**Description**
This command, along with the `disable address_binding trap_log` will enable and disable the sending of trap log messages for IP-MAC binding. When enabled, the Switch will send a trap log message to the SNMP agent and the Switch log when an ARP packet is received that doesn't match the IP-MAC binding configuration set on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

#### Example usage:

To enable sending of IP-MAC Binding trap log messages on the Switch:

```
DES-3028P:4#enable address_binding trap_log
Command: enable address_binding trap_log
Success.
DES-3028P:4#
```

### disable address_binding trap_log

**Purpose**
Used to disable the trap log for the IP-MAC binding function.

**Syntax**
```
disable address_binding trap_log
```

**Description**
This command, along with the `enable address_binding trap_log` will enable and disable the sending of trap log messages for IP-MAC binding. When enabled, the Switch will send a trap log message to the SNMP agent and the Switch log when an ARP packet is received that doesn't match the IP-MAC binding configuration set on the Switch.

**Parameters**
None.

**Restrictions**
Only Administrator-level users can issue this command.

#### Example usage:

To disable sending of IP-MAC Binding trap log messages on the Switch:

```
DES-3028P:4#disable address_binding trap_log
Command: disable address_binding trap_log
Success.
DES-3028P:4#
```
**Command:** disable address_binding trap_log

Success.

DES-3028P:4#

### show address_binding dhcp_snoop

**Purpose:** To show address_binding entries created by DHCP packet.

**Syntax:**
```
show address_binding dhcp_snoop {max_entry {ports <portlist>} | binding_entry {port <port>}}
```

**Description:** This command is used to show address_binding dhcp_snoop information.

**Parameters:**
- `<portlist>` – Specifies a port or range of ports.
- `<ports>` – Specifies ports on the device.

**Restrictions:** None.

**Example usage:**

To show address_binding dhcp_snoop:

DES-3028P:4# show address_binding dhcp_snoop
Command: show address_binding dhcp_snoop

DHCP_Snoop : Enabled
Success.

DES-3028P:4#

To show address_binding dhcp_snoop entry:

DES-3028P:4# show address_binding dhcp_snoop binding_entry
Command: show address_binding dhcp_snoop binding_entry

<td>This command is used to disable the function which allows entries to be created by the DHCP packet.</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage

To disable address_binding dhcp_snoop:

```
DES-3028P:4# disable address_binding dhcp_snoop
Command: disable address_binding dhcp_snoop
Success.
DES-3028P:4#
```

clear_address_binding dhcp_snoop binding_entry

<table>
<thead>
<tr>
<th>Purpose</th>
<th>To clear the address binding entries learned for the specified ports.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`clear address_binding dhcp_snoop binding_entry ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>To clear the address binding entries learned for the specified ports.</td>
</tr>
<tr>
<td>Parameters</td>
<td><code>&lt;portlist&gt;</code> – Specifies the list of ports that you would like to clear the dhcp-snoop learned entry.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>
Example usage
To address_binding dhcp_snoop binding_entry:

```
DES-3028P:4# clear address_binding dhcp_snoop binding_entry ports 1-3
Command: clear address_binding dhcp_snoop binding_entry ports 1-3
Success.
DES-3028P:4#
```

```
| config address_binding dhcp_snoop max_entry |
| Purpose | Specifies the max number of entries which can be learned by the specified ports. |
| Syntax | `config address_binding dhcp_snoop max_entry ports [<portlist> | all] limit [<value 1-10> | no_limit]` |
| Description | By default, the per port max entry is 5. This command specifies the max number of entries which can be learned by the specified ports. |
| Parameters | `<portlist>` – Specifies the list of ports that you would like to set the maximum dhcp-snoop learned entry. `limit` – Specifies the maximum number. |
| Restrictions | Only Administrator-level users can issue this command. |
```

Example usage
To set the maximum number of entries that ports 1-3 can learn to 10:

```
DES-3028P:4# config address_binding dhcp_snoop max_entry ports 1-3 limit 10
Command: config address_binding dhcp_snoop max_entry ports 1-3 limit 10
Success.
DES-3028P:4#
```
The Loopback Detection commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>config loopdetect</td>
<td>{recover_timer [value 0</td>
</tr>
<tr>
<td>config loopdetect ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
<tr>
<td>enable loopdetect</td>
<td></td>
</tr>
<tr>
<td>disable loopdetect</td>
<td></td>
</tr>
<tr>
<td>show loopdetect</td>
<td></td>
</tr>
<tr>
<td>show loopdetect ports</td>
<td>[&lt;portlist&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**config loopdetect**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to configure loopback detection on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>config loopdetect {recover_timer [value 0</td>
</tr>
<tr>
<td>Description</td>
<td>Used to configure loopback detection on the switch.</td>
</tr>
<tr>
<td>Parameters</td>
<td>recover_timer – The time interval (in seconds) used by the Auto-Recovery mechanism to decide how long to check if the loop status is gone. The valid range is 60 to 1000000. Zero is a special value which means to disable the auto-recovery mechanism. The default value is 60. interval – The time interval (in seconds) at which the remote device transmits all the CTP packets to detect the loopback event. The default value is 10, with a valid range of 1 to 32767.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>Only Administrator-level users can issue this command.</td>
</tr>
</tbody>
</table>

Example usage:

To set the recover time to 0, and interval to 20:

```
DES-3028P:4#config loopdetect recover_timer 0 interval 20
Command: config loopdetect recover_timer 0 interval 20
Success
DES-3028P:4#
```
config loopdetect ports

Purpose: Used to configure loopback detection on the switch.
Syntax: `config loopdetect ports [<portlist> | all] | state [enable | disable]`
Description: Used to configure loopback detection on the switch.
Parameters:
- `<portlist>` – Specifies a range of ports for the loopback detection
- `state [enable | disable]` – Allows the loopback detection to be disabled or enabled.
Restrictions: Only Administrator-level users can issue this command.

Example usage:
To set the loopdetect state to enable:

```
DES-3028P:4#config loopdetect ports 1-5 state enable
Command: config loopdetect ports 1-5 state enable
Success
DES-3028P:4#
```

enable loopdetect

Purpose: Used to globally enable loopback detection on the switch.
Syntax: `enable loopdetect`
Description: Used to globally enable loopback detection on the switch.
Parameters: None.
Restrictions: Only Administrator-level users can issue this command.

Example usage:
To enable loop-back detection on the switch:

```
DES-3028P:4#enable loopdetect
Command: enable loopdetect
Success
DES-3028P:4#
```

disable loopdetect

Purpose: Used to globally disable loopback detection on the switch.
Syntax: `disable loopdetect`
Description: Used to globally disable loopback detection on the switch.
Parameters: None.
Restrictions: Only Administrator-level users can issue this command.

Example usage:
To disable loop-back detection on the switch:
**show loopdetect**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current loopback detection settings on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td><code>show loopdetect</code></td>
</tr>
<tr>
<td>Description</td>
<td>Used to display the current loopback detection settings on the switch</td>
</tr>
<tr>
<td>Parameters</td>
<td>None.</td>
</tr>
<tr>
<td>Restrictions</td>
<td>None.</td>
</tr>
</tbody>
</table>

**Example usage:**

To show loopdetect:

```
DES-3028P:4#show loopdetect
Command: show loopdetect

Loopdetect Global Settings
---------------------------
Loopdetect Status         : Enabled
Loopdetect Interval       : 20
Recover Time              : 60

DES-3028P:4#
```

**show loopdetect ports**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>Used to display the current per-port loopback detection settings on the switch.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Syntax</td>
<td>`show loopdetect ports [&lt;portlist&gt;</td>
</tr>
<tr>
<td>Description</td>
<td>Used to display the current per-port loopback detection settings on the switch</td>
</tr>
</tbody>
</table>
| Parameters               | `<portlist>` – Specifies a range of ports for the loopback detection
                           `all` – Specifies all ports for the loopback detection. |
| Restrictions             | None.                                                               |

**Example usage:**

To show loopdetect ports:

```
DES-3028P:4#disable loopdetect
Command: disable loopdetect

Success

DES-3028P:4#
```
```
DES-3028P:4#show loopdetect ports 1-3
Command: show loopdetect ports 1-3

<table>

TECHNICAL SUPPORT COMMANDS

The Technical Support commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>show tech_support</td>
<td></td>
</tr>
<tr>
<td>upload tech_support_to_TFTP</td>
<td>&lt;ipaddr&gt; &lt;path_filename 64&gt;</td>
</tr>
</tbody>
</table>

Each command is listed, in detail, in the following sections.

**show tech_support**

- **Purpose**: Used to show the information for technical support.
- **Syntax**: `show tech_support`
- **Description**: This command is especially used by the technical support personnel to dump the device’s overall operation information. The information is project dependent and includes the following information:
  - Basic System information
  - system log
  - Running configuration
  - Layer 1 information
  - Layer 2 information
  - Application
  - OS status
- **Parameters**: None.
- **Restrictions**: Only Administrator-level users can issue this command.
Example usage

To display technical support information on the Switch:

```
DES-3028P:4# show tech_support
Command: show tech_support

upload tech_support_to_TFTP

**Purpose**
Used to upload the information of technical support.

**Syntax**
upload tech_support_to_TFTP <ipaddr> <path_filename>

**Description**
The upload tech_support_to_TFTP command is used to upload the technical support information.

**Parameters**
- `<ipaddr>` – Specifies the ipaddress of TFTP server.
- `<path_filename>` – Specifies the file path to store the information of technique’s support in TFTP server.

**Restrictions**
Only Administrator-level users can issue this command.

**Example usage**
To upload the technical support information:

```
DES-3028P:4# upload tech_support_to_tftp 10.55.47.1 tech_report_20080423.txt
Command: upload tech_support_to_tftp 10.55.47.1 tech_report_20080423.txt

Connecting to server................... Done.
Upload technique support information... Done.

Success.
```
The switch history commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

<table>
<thead>

#### Power feeding for PoE

| DES-3028P:        | Per port → 15.4W (Default), |
|                  | Output capacity for DES-3028P→185W |
| DES-3052P:        | Per port → 15.4W (Default), |
|                  | Output capacity for DES-3052P→370W |

PoE Capable Ports

- DES-3028P: Random 12 ports
- DES-3052P: Random 24 ports
- Max 15.4W per port

### PoE Specification

Supplies power to PD device up to 15.4W per port, meeting IEEE802.3af standards and more sufficiently is able to provide power to PD devices.

- Auto discovery feature, automatically recognize the connection of PD device and immediately sends power to it
- Auto disable port if the port current is over 350mA while other ports remain active
- Active circuit protection, automatically disables the port if there is a short while other ports remain active

PD should be able to receive the power following the classification below:

<table>
<thead>
<tr>
<th>Class</th>
<th>Usage</th>
<th>Max power used by PD</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Default</td>
<td>0.44 to 12.95W</td>
</tr>
<tr>
<td>1</td>
<td>Optional</td>
<td>0.44 to 3.84W</td>
</tr>
<tr>
<td>2</td>
<td>Optional</td>
<td>3.84 to 6.49W</td>
</tr>
<tr>
<td>3</td>
<td>Optional</td>
<td>6.49 to 12.95W</td>
</tr>
<tr>
<td>4</td>
<td>Not allowed</td>
<td>Reserved</td>
</tr>
</tbody>
</table>

PSE should be provide the power following the classification below:

<table>
<thead>
<tr>
<th>Class</th>
<th>Usage</th>
<th>Max power used by PD</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Default</td>
<td>15.4W</td>
</tr>
<tr>
<td>1</td>
<td>Optional</td>
<td>4.0W</td>
</tr>
<tr>
<td>2</td>
<td>Optional</td>
<td>7.0W</td>
</tr>
<tr>
<td>3</td>
<td>Optional</td>
<td>15.4W</td>
</tr>
<tr>
<td>4</td>
<td>Reserved</td>
<td>15.4W</td>
</tr>
</tbody>
</table>

DES-3028P/DES-3052P should follow the standard PSE pin-out standard of Alternative A which is sending out power over number 1,2,3,6 pins of 8 wires of CAT5 UTP cable.

DES-3028P/DES-3052P works with all D-Link 802.3af capable devices.

9. DES-3028P/DES-3052P works with all non-802.3af capable D-Link AP, IP Cam and IP phone via DWL-P50.

Appendix B

ARP PACKET CONTENT ACL

Address Resolution Protocol (ARP) is the standard method for finding a host's hardware address (MAC address) when only its IP address is known. This protocol is vulnerable so hackers can spoof the IP and MAC information in the ARP packets to attack a LAN (known as ARP spoofing). This document is intended to introduce ARP protocol, ARP spoofing attacks, and the countermeasure devised by D-Link to put an end to ARP spoofing attacks.

How Address Resolution Protocol works

In the process of ARP, PC A will, firstly, issue an ARP request to query PC B’s MAC address. The network structure is shown in Figure-1.

![Figure 1](image)

In the mean time, PC A’s MAC address will be written into the “Sender H/W Address” and its IP address will be written into the “Sender Protocol Address” in ARP payload. As PC B’s MAC address is unknown, the “Target H/W Address” will be “00-00-00-00-00-00” while PC B’s IP address will be written into the “Target Protocol Address”, shown in Table-1.

<table>
<thead>
<tr>
<th>H/W type</th>
<th>Protocol type</th>
<th>H/W address length</th>
<th>Protocol address length</th>
<th>Operation</th>
<th>Sender H/W address</th>
<th>Sender protocol address</th>
<th>Target H/W address</th>
<th>Target protocol address</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>ARP request</td>
<td>00-20-5C-01-11-11</td>
<td>10.10.10.1</td>
<td>00-00-00-00-00-00</td>
<td>10.10.10.2</td>
</tr>
</tbody>
</table>

Table 1 (ARP Payload)

The ARP request will be encapsulated into the Ethernet frame and sent out. As can be seen in Table-2, the “Source Address” in the Ethernet frame will be PC A’s MAC address. Since the ARP request is sent via a broadcast method, the “Destination address” is in the format of Ethernet broadcast (FF-FF-FF-FF-FF-FF).

<table>
<thead>
<tr>
<th>Destination address</th>
<th>Source address</th>
<th>Ether-type</th>
<th>ARP</th>
<th>FCS</th>
</tr>
</thead>
<tbody>
<tr>
<td>FF-FF-FF-FF-FF-FF</td>
<td>00-20-5C-01-11-11</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Table 2 (Ethernet frame format)

When the switch receives the frame, it will check the “Source Address” in the Ethernet frame’s header. If the address is not in its Forwarding Table, the switch will learn PC A’s MAC and the associated port and enter them in its Forwarding Table.
In addition, when the switch receives the broadcasted ARP request, it will flood the frame to all ports except the source port, port 1 (see Figure – 2).

![Figure – 2](image)

When the switch floods the frame of the ARP request to the network, all PCs will receive and examine the frame but only PC B will reply to the query because the destination IP matches (see Figure – 3).

![Figure – 3](image)

When PC B replies to an ARP request, its MAC address will be written into the “Target H/W Address” table in the ARP payload shown in Table-3. The ARP reply will be then encapsulated into the Ethernet frame again and sent back to the sender. The ARP reply is the form of a Unicast communication.

<table>
<thead>
<tr>
<th>H/W type</th>
<th>Protocol type</th>
<th>H/W address length</th>
<th>Protocol address length</th>
<th>Operation</th>
<th>Sender H/W address</th>
<th>Sender protocol address</th>
<th>Target H/W address</th>
<th>Target protocol address</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>ARP reply</td>
<td>00-20-5C-01-11-11</td>
<td>10.10.1</td>
<td>00-20-5C-01-22-22</td>
<td>10.10.2</td>
</tr>
</tbody>
</table>

Table – 3 (ARP Payload)
When PC B replies to the query, “Destination Address” in the Ethernet frame will change to PC A’s MAC address. The “Source Address” will be changed to PC B’s MAC address (see Table – 4).

<table>
<thead>
<tr>
<th>Destination address</th>
<th>Source address</th>
<th>Ether-type</th>
<th>ARP</th>
<th>FCS</th>
</tr>
</thead>
<tbody>
<tr>
<td>00-20-5C-01-11-11</td>
<td>00-20-5C-01-22-22</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Table – 4 (Ethernet frame format)

The switch will also examine the “Source Address” of the Ethernet frame and if it finds that the address is not in the Forwarding Table, the switch will learn PC B’s MAC and update its Forwarding Table.

<table>
<thead>
<tr>
<th>Forwarding Table</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port1 00-20-5C-01-11-11</td>
</tr>
<tr>
<td>Port2 00-20-5C-01-22-22</td>
</tr>
</tbody>
</table>
How ARP spoofing attacks a network

ARP spoofing, also known as ARP poisoning, is a method to attack an Ethernet network which may allow an attacker to sniff data frames on a LAN, modify the traffic, or stop the traffic altogether (known as a Denial of Service - DoS attack). The principle of ARP spoofing is to send the fake, or spoofed ARP messages to an Ethernet network. Generally, the aim is to associate the attacker's or random MAC addresses with the IP address of another node (such as the default gateway). Any traffic meant for that IP address would be mistakenly re-directed to the node specified by the attacker.

IP spoofing attacks are caused by Gratuitous ARPs that occur when a host sends an ARP request to resolve its own IP address. Figure-4 shows a hacker within a LAN to initiate ARP spoofing attack.

![Figure - 4](image)

In the Gratuitous ARP packet, the “Sender protocol address” and “Target protocol address” are filled with the same source IP address itself. The “Sender H/W Address” and “Target H/W address” are filled with the same source MAC address. The destination MAC address is the Ethernet broadcast address (FF-FF-FF-FF-FF-FF). All nodes within the network will immediately update their own ARP table in accordance with the sender’s MAC and IP address. The format of Gratuitous ARP is shown in Table – 5.
A common DoS attack today can be done by associating a nonexistent or any specified MAC address to the IP address of the network’s default gateway. The malicious attacker only needs to broadcast ONE Gratuitous ARP to the network claiming it is the gateway so that the whole network operation will be turned down as all packets sent through the Internet will be directed to the wrong node.

Likewise, the attacker can either choose to forward the traffic to the actual default gateway (passive sniffing) or modify the data before forwarding it (man-in-the-middle attack). The hacker fools the victims PC to make it believe it is a router and fools the router to make it believe it is the victim. As can be seen in Figure-5 all traffic will be then sniffed by the hacker without the users knowledge.
Prevent ARP spoofing via packet content ACL

Concerning the common DoS attack today caused by the ARP spoofing, D-Link managed switches can effectively mitigate it via its unique Packet Content ACL.

The reason for this is that basic ACLs can only filter ARP packets based on packet type, VLAN ID, Source and Destination MAC information, therefore there is a need for further inspections of ARP packets. To prevent ARP spoofing attacks, we will demonstrate here using the Packet Content ACL on the DES-3028 block the invalid ARP packets which contain faked gateway’s MAC and IP binding.

Example Topology

**Configuration:**

The design of the Packet Content ACL on the DES-3028/28P/28G/52/52P series can inspect any specified content in the first 20 bytes of an ARP packet (up to 80 bytes in total at one time). It utilizes offsets to match individual fields in the Ethernet Frame. An offset contains 16 bytes and the switch supports 5 offsets with each offset being divided into a four 4-byte values in a HEX format. The offset ranges from 0-76. (Refer to the configuration example below for details)

In addition, the configuration logics are:

1. Only if the ARP matches the Source MAC addresses in Ethernet, Sender’s MAC address and Senders IP address in the ARP protocol can it pass through the switch. (In this example, it is the gateway’s ARP.)
2. The switch will deny all other ARP packets which claim they are from the gateway’s IP.

! IMPORTANT!!

When calculating packet offset on DES-3028/28P/28G/52/52P series, remember that even though a port is an untagged port, the packet will add additional 4 bytes of 802.1Q header (TCI) for switching internal process, shown in Figure – 6.

All packets will add an additional 4 bytes to assign PVID for the switching internal process.

| Step 1 | `create access_profile ethernet source_mac FF-FF-FF-FF-FF-FF ethernet_type profile_id 1`    | - Create access profile 1  
- To match Ethernet Type and Source MAC address.                                                                                                                                                                                                                                                                                                                                                   |
| Step 2 | `config access_profile profile_id 1 add access_id 1 ethernet source_mac 01-02-03-04-05-06 ethernet_type 0x0006 port 1-26 permit` | - Configure access profile 1  
- Only if the gateway's ARP packet that contains the correct Source MAC in Ethernet frame can pass through the switch.                                                                                                                                                                                                                                                                                              |
| Step 3 | `create access_profile packet_content_mask offset_0-15 0x0 0x0 0x0 0x0 0x0000FFFF Ethernet Type(2-byte)`  
`offset_16-31 0x0 0x0 0x0 0x0 0xFFFF0000 Sdr IP(4-byte)` profile_id 2 | - Create access profile 2 for no 802.1Q header  
- The offset_0-15: mask for Ethernet Type, the significant byte are from 12 to 13.  
- The offset_16-31: mask for Sdr IP in ARP packet, the significant byte are from 28 to 31.                                                                                                                     |
| Step 4 | `config access_profile profile_id 2 add access_id 1 packet_content offset 12 0x00000000 Ethernet Type(2-byte): ARP offset 28 0xA5A5A5A Sdr IP(4-byte): 10.90.90.90 port 1-26 deny` | - Configure access profile 2  
- The rest ARP packets whose Sdr IP claim they are the gateway's IP will be dropped.                                                                                                                                                                                                                                                                   |
| Step 5 | `create access_profile packet_content_mask offset_0-15 0x0 0x0 0x0 0x0 0x0000FFFF Ethernet Tag(2-byte)`  
`offset_16-31 0xFFFF0000 0x0 0x0 0x0 0x0000FFFF Ethernet Type(2-byte)`  
`offset_32-47 0xFFFF0000 0x0 0x0 0x0 0x0 Sdr IP(4-byte)` profile_id 3 | - Create access profile 3 for 802.1Q header  
- The offset_0-15: mask for Ethernet Tag, the significant byte are from 12 to 13.  
- The offset_16-31: mask for Ethernet Type, the significant byte are from 16 to 17.  
- The offset_32-47: mask for Sdr IP in ARP packet, the significant byte are from 32 to 35.                                                                                                        |
| Step 6 | `config access_profile profile_id 3 add access_id 1 packet_content offset 12 0x0 0x00000000 Ethernet Tag(2-byte)`  
`offset 16 0x00000000 Ethernet Type(2-byte): ARP offset 32 0xA5A5A5A Sdr IP(4-byte): 10.90.90.90 port 1-26 deny` | - Configure access profile 3  
- The rest ARP packets whose Sdr IP claim they are the gateway's IP will be dropped.                                                                                                                                                                                                                                                                 |
| Step 7 | `Save`                                                                                       | - Save config                                                                                                                                                                                                                                                                                                                                                           |
Password Recovery Procedure

This document describes the procedure for resetting passwords on D-Link Switches. Authenticating any user who tries to access networks is necessary and important. The basic authentication method used to accept qualified users is through a local login, utilizing a Username and Password. Sometimes, passwords get forgotten or destroyed, so network administrators need to reset these passwords. This document will explain how the Password Recovery feature can help network administrators reach this goal.

The following steps explain how to use the Password Recovery feature on D-Link devices to easily recover passwords.

Complete these steps to reset the password:

1. For security reasons, the Password Recovery feature requires the user to physically access the device. Therefore this feature is only applicable when there is a direct connection to the console port of the device. It is necessary for the user needs to attach a terminal or PC with terminal emulation to the console port of the switch.

2. Power on the switch. After the runtime image is loaded to 100%, the Switch will allow 2 seconds for the user to press the hotkey [\w] (Shift + 6) to enter the “Password Recovery Mode”. Once the Switch enters the “Password Recovery Mode”, all ports on the Switch will be disabled.

3. In the “Password Recovery Mode” only the following commands can be used.

<table>
<thead>
<tr>
<th>Command</th>
<th>Parameters</th>
</tr>
</thead>
<tbody>
<tr>
<td>reset config</td>
<td>The reset config command resets the whole configuration will be back to the default value</td>
</tr>
<tr>
<td>reboot</td>
<td>The reboot command exits the Reset Password Recovery Mode and restarts the switch. A confirmation message will be displayed to allow the user to save the current settings.</td>
</tr>
<tr>
<td>reset account</td>
<td>The reset account command deletes all the previously created accounts.</td>
</tr>
<tr>
<td>reset password</td>
<td>The reset password command resets the password of the specified</td>
</tr>
