D8000
LCD Slider Station
Installation Instructions

STEP 1: Locate female connector provided and terminate wires as shown.

STEP 2: Insert the wired connector through the hole in the back of the shroud. Attach the shroud to the 4 gang box as shown, using (4) 6-32 x 1" screws provided.

STEP 3: Plug connector into back of slider assembly as shown. Push the wire into the wire way in between the shroud and the back of the wall box. Ensure the correct LUMEN ID DIP-switch setting prior to installation.

STEP 4: Hook the top of the slider assembly wall plate over the angled tabs on the shroud and rotate the assembly back into place.

STEP 5: Use a #1 PHILLIPS screwdriver with a 0.125 O.D. to seat the 2 retaining screws into the slots on the inside of the wall plate by turning them counter-clockwise. Screws should be turned out off the unit, and the retaining screws should be turned all the way in (clock-wise) before wall plate is set into place.

NOTE: For termination of the last device in the run, tie pins 2 & 5 together.
