### eXtreme Pre-Terminated Copper Trunk Cables

#### APPLICATION
Copper trunk cable assemblies are the ideal solution for data centers and other applications where speed of installation is important. Factory termination and testing simplify installation and improve consistency while saving time and labor, as compared to field-terminated installations. Assemblies are custom configured with connectors in pre-engineered lengths to meet the specific needs of each application. A braided sleeve binding bundles individual cables into an aesthetic and cohesive trunk assembly, while an optional pulling eye protects terminations during shipment, ensuring easy and efficient installation.

#### SPECIFICATION
Trunk cables shall be available in variable bundle sizes of 6, 8, or 12. They shall be available in plenum, riser, or LSZH ratings. Trunk cables shall be available in Cat 6 UTP cable constructions. Each shall be available in jack, plug, open, or cassette termination combinations depending on cable type. Each will be available in custom lengths in one-foot increments. Total trunk length shall not exceed ANSI/TIA standards. A pulling eye option is available on most configurations to protect terminations during shipment, ensuring easy and efficient installation.

#### FEATURES
- Fast and easy installation with 75% reduction in labor costs
- Braided sleeve binding and optional pulling eye ensure snag-free installation
- Trunks use eXtreme UTP connectors with patented Retention Force Technology for consistent system reliability
- Plugs feature clear SlimLine design which includes a snagless strain-relief boot for Cat 6
- Cable assemblies are 100% factory tested, with test results available for each link
- Terminated ends offered in either staggered or even cut with customized breakout length from braided sleeve for improved flexibility during installation and appearance after installation
- Trunks are also available with e2XHD Copper Cassettes
- Each trunk assembly receives an individual identification number, and individual cables are numbered relative to that number (custom labeling available on request)

#### DESIGN CONSIDERATIONS
- Available in plenum, riser, or LSZH cable ratings
- Plenum-rated cable assemblies use a braided mesh sleeve made of a plenum-rated material that is black in color
- Riser-rated cable assemblies use a braided mesh sleeve made of a riser-rated material that is white in color
- Material properties of braided mesh sleeve are halogen free on LSZH cable assemblies and black in color
- Standard colors are blue for UTP cable, black for UTP jacks (more colors available) and clear for plugs
- Available in 1-foot increments from 10-295 feet (min. 6-ft length for Cat 6 assemblies)
- Minimum breakout lengths: 18 inches for bundles of 6, 20 inches for bundles of 8, and 24 inches for bundles of 12
- Default alignment is staggered for connector terminations and even for plug and open terminations
- e2XHD cassettes terminated to trunks work exclusively with e2XHD Flat or Angled patch panels

#### STANDARDS COMPLIANCE
- System components meet or exceed the category requirements for performance per ANSI/TIA-568-C.2
- Jack-to-Jack assemblies are tested to permanent link requirements
- Jack-to-Plug assemblies are tested to channel requirements with a 10-foot patch cord
- Plug-to-Plug assemblies are tested to channel requirements
