Introducing Leviton’s Exclusive New R.E.B Recessed Entertainment Box

Think “Inside the Box”

Definition

The Leviton Recessed Entertainment Box (R.E.B.) is designed to help the installer manage home theater electronics from a single location. The R.E.B. centralizes device connection points for all AC power, audio, video, home theater, data and phone connections. The R.E.B. enables consumers to take advantage of the latest technologies such as satellite TV, internet access, home networking, whole-house audio/video and more.

Application

Flush-mounted on the wall, the R.E.B. installs practically invisibly behind wall units and entertainment centers, wall-mount flat screen TVs and computer workstations. Perfect for both new construction and retrofit applications, the R.E.B. is a cost-effective modular distribution point that is ideal for houses, apartments, coops and condominiums.
R.E.B. Features and Benefits

- Utilizing “old work” junction boxes and low voltage mounting brackets, the installer can configure the three device openings with any combination of line and low voltage products to support any application.

- A low profile frame comes with the R.E.B. This frame meets consumers’ aesthetic expectations by providing a neat, clean recessed installation.

- A snap-in junction box cover provides the installer with a means of running electrical piping for component to component applications.

- The R.E.B. can be used for new construction (stud-mounted) and retrofit (wall-mounted) applications. The product’s versatility allows its use in a myriad of remodeling applications.

- An optional high profile cover is also available that channels all wires through the bottom of the R.E.B. for a neat, finished installation.

- Offered in paintable white ABS molded plastic, providing structural integrity equal to, or better than, comparable metal enclosures at less cost.

- Two-Year Limited Product Warranty.
